Ed, I think it's a little much to ask for so much all at once. For Dick, an
improvement would be for him to start acting human.

No kidding, I spent a month in WV last summer during the disaster relief effort after the flooding they had. Using the VHF radios the Red Cross has in their Emergency Response Vehicles was a challenge, we definately could have used some more hams to facilitate better communication.

And I ran into that again in NYC, I spent the majority of 3 months there with the Red Cross, the cell phone they issued me was pi$$ing me off. Too many people in this line of work are relying too much on cell phones, this is why I took my amateur test last saturday (and passed), and am now working on getting the code down for my general ticket.

Let's put this into perspective.

The code bashers sat that requiring hams to learn a useful skill like Morse code so that they could be qualified to actually operate it, is of no benefit. But requiring them to learn basic digital theory thatg will be useless to them to use on their storebought rigs. is necessary. We got it.

>
> 73
>
> Steve, K4YZ

There is a really simple verifiable way to put a signature on a computer generated piece of artwork...or anything else for that matter, involving objects built on "layers" in a document.

At the first layer, I put the name "Kim Walker" and fill in whatever else I want. In my Corel software, would then just add a "box" with a fill of white. From there, just build the QSL card, and send the very first one to the ARRL--or whomever is the independent third party. This could be sent either as the original file format or as a .gif or .jpg, or whatever. In Corel, the original file would be in .cdr format and only able to be opened by Corel Draw...so the hard part would be some kind of standard to use where the ARRL doesn't have to go out and purchase every piece of graphic arts package there is.

At any rate, if the ARRL has the original file, and there is ever any question as to someone's QSL card, they have the original, with the "secret message" on the bottom stack.

Is QSLing really *that* involved? I am asking...I haven't ever really paperchased, so I don't know. There's also other much more sophisticated ways of electronic signatures...so it could be done.

Who said anything about "requiring" it, Dick. I recommend learning Morse code
AND experimenting with digital software/firmware/hardware without any sign
of a requirement. I recommend choosing to do those things because they are fun,
not because they are required.

So why do you continue to equate electrical engineeringt with ham radio? They don't have all that much in common, only the radio portion. I'm quigte sure engineering covers many other things, in fact you stated your electrical engineering training was not about radio at all, rather power transmission. Could you explain, leaving out your normal trolling?

It is ironic, but I believe that those who filed those complaints thought that they were defending the sanctity of the mode by preventing people from abusing the system by learning code only to 5 wpm.

Actually, hams are doing it. The same techniques could be and are applied to other modes, probably more effectively than with OOK CW. My suggestion was that DSP might let one lock up on the coherence in an individual dit or dah element, even if it was not in phase lock with the previous or subsequent elements.

>I drove up to Texas Towers yesterday and got me an IC-756pro. I played with
>it last night and it has 32 bit processing power.

Yes, but alas, only a 24-bit A/D. And to get to the ~130 dB blocking dynamic range of the better modern analog rigs, one would need at least 43 bits. Someday, maybe, although I think that the analog end of the A/D would possibly crunch before the 43 bits did. That is why I feel that DSP and SDR radios of the future will probably still use a combination of analog and digital receive techniques.

Yup, and since virtually allo hams lack the gear needed to make MUF tests, they almost universaly check for band conditions by
tuning around and listening for band activity. I guess when you find no activity you, like most hams, consider the band "Dead" without
actually confirming it through MUF tests. And often you'd be wrong, the band isn'te dead at all, but marginally usable but unused because most hams checking it assume it's dead!

Nice to see you following right along.

You really are a bit twisted over all this, aren't you Ed? You can't imagine that those reporting violations might have been concerned that the culprits were violating the law. Of course that might have been considered inconsequential beside all the CB violations going on, and hey, we sure do welcome all those violators, don't we?

Thats not what I said at all. I said that codebashers insist that hams learn things like DSP programming that are useless to most of them but that they do not need to learn or be tested on useful modes like CW. That's the real meaning of his statement.

Nonsense. Not a single rig that I designed and built was built by a degreed electrical engineer. Almost none of the early ham gear was, either. Sure, design engineers get paid to design whatever their employers decide they can sell, including the coreless telephones that Squiggy cranks out. But your fixation on the connection between engineering and ham radio is very false, and most hams know it. The fact that an engineer is also a ham is simply a footnote.

I spent 15 years in academia and private industry in addition to my time with The Uncle, so I know that the above is true.

The one thing that attracted me to and kept me at the FCC was that my expertise and efforts in the arcane world of communications regulation were appreciated and respected, and that as long as I did my job professionally and met the expected performance standards, arbitrary discharge was not a worry.

My long-term immediate supervisor and I did not always agree, and at times we strongly disagreed, but we respected each other. As his de-facto "consigliere" I guided him just as much as he guided me .

The burn-out started when top management (read: Hundt and his bag carriers, reqardless of whether they were "just carring out orders" or not) started tinkering with a mechanism that they did not have either the committment or the knowledge to keep running smoothly and when they tried to put it back together there were several gears and springs left over.

That was one reason why I set up a solo practice after I retired from the Commish'. No one to blame but myself.

Those of us who know have an obligation to advise and guide those who do not know.

That's the kind of engineering and law (and ham radio and a lot of other areas of my private life) that I practice.

>or leave.

It was my job to be a regulatory professional and do what was necessary to carry out that very specialized business. I had that obligation to the People of the United States for whose benefit I worked.

He and the folks with which he surrounded himself had no idea what the nuts and bolts of communications regulation was all about, and not only refused to be guided by those of us who did but considered those of us who believed that we were doing something important as just so much Kleenex to be crumpled up and discarded.

86 out of 97 of us who were eligible field enforcement veterans with lots of skill and experience took the voluntary early retirement option in September 1995. What does that say? Hundt finished the trashing of the field with involuntary layoffs of 160+ others a year later. By your theory every one of us was out of step but Jack, or in this case, Reed.

>Civilians always have a difficult time grasping this simple
>concept.

The FCC is not the Army, and yes I do understand it. Prior to the FCC I spent 7 years with DoD, mostly with SAC in the post-LeMay pre-Vietnam days.

Understanding it and believing that it is a good model of management of a professional organization are two different things.

>Hundt carried out the orders of his superiors with aplomb.

He did a wonderful job of taking an agency which was respected world-wide and trashing it.

I agree Vito,
We need more people involved in ARES. We get perhaps one or two stations signing on in my area. I agree that ham radio would be good in an emergency. Cell phones in alot of areas are hit and miss, as in mine. In alot of the Western states such as mine, radio would be, in any manmade or natural disaster, the only way to communicate. And, we have the gear and can set up in a house or the field if needed should local emergency communications are knocked out.
What disturbs me is lack of participation in areas should an emergency occur. In alot of areas we're simply not ready. 73's Jim

>"duplicate what had gone before".

You cannot call that "standardization" with a straight face. That is just
plain
physics of amplitude modulating a carrier frequency. :-)

>With "new modes and technology", the problem is a growing proliferation
>of digital modes that are incompatible. Digital tower of babel and all that.
>Limits the appeal of new modes.

Just HOW does this "limiting of appeal" come about? You no have the
equipment to do it? You no unnastand da mode?

REAL standardization as applied to something understandable to PCTAs is
the ITU-R specifically calling out the International Morse Code as it is used
in international telegram telegraphy. There still are many, many different
versions of codes in 1-0, on-off keying. [some PCTAs call this "digital"...:-)
]

REAL standardization occurs when a majority uses a particular method, one
among many different ones possible. Some other cases in point: RS-232 as
a serial interface on computing equipment and peripherals; NTSC or PAL
scanning, synchronization, and video modulation (light polarity relative to
carrier level); the American Standard Code for Information Interchange
(ASCII) which everyone is using to transfer messages into/out-of their
computers; even the screw threads in the threaded fasteners holding their
manufactured or I-designed-it-myself-but-bought-as-kits radio equipment.

Real whining, bitching, and griping comes about when some who have never ever tried to experiment with something new and strange DEMAND "instant standardization" and off-the-shelf-availability.

>But there's a slight semantic change there, Ed. The usual phrase is
>"advancing the state of the art" which is usually defined as pushing
>things "forward" in some way or another. For example, SSB voice is
>an advance over DSB voice for communications purposes because it uses
>less spectrum and delivers better S/N for the same power level.

We all know about SSB, Jimmy. :-)

"Single sideband" methods were already in use in landline telephony BEFORE it was ever "on the air" by anyone. The COMMERCIAL communications providers PROVED the "better S/N" part in regular 24/7 use on HF, accumulated data along with traffic and outages. [12 KHz wide sideband frequency-multiplexing four voice-grade circuits at once]

Single-channel, single-user SSB had not found a ready market until after WW2 and SAC needing a long-distance voice comm link to their airborne loiterers. Not CW, a VOICE circuit. The "less spectrum and better S/N for the same power level" applied to WEIGHT of airborne equipment. SAC SSB did not need heavy modulators required of standard AM at the time when it could get by with lighter Class B finals and low-level modulation. Remember that this is AIRBORNE equipment. Ever go through a weights-and-balance exercise at different "stations?" :-)

What most hams of the late 1940s and early 1950s liked, by their words, almost to a man, was that SSB did NOT need a 500 Watt audio power amplifier to modulate a 1000 Watt final. Price a 1950 modulation transformer in 1950 dollars sometime. :-)

>How does one define "adding to the state of the art"? Seems to me it
>would mean anything that hadn't been done exactly the same way before.
>By that definition, any new design that is not an exact copy of a
>previous one adds to the state of the art.
>
>Works for me!

So...to use the Miccolis Confrontational method...you would call yanking a chassis out of its cabinet and putting it in another, differently-painted, new flashy cabinet as "adding to the state of the art?!?"

...modern art, maybe. :-)

>
>Additionally, people can be helped indirectly simply
>because hams have helped provide local assessments
>as to road conditions, travel problems, etc. The
>public may have no idea that a news advisory in
>any way involved hams.

Bill, with all due respect, my wife and I did a trip to the
midwest a half year ago, 6073 miles through 12 states,
getting rather complete travel advisories over the Internet
from the states' own websites of their respective transportation
agencies. We did that because we've used the information
from the Washington, Oregon, and California agencies before
from winter to summer seasons. All of those sites had rather
detailed advisories on road conditions, road reconstruction
locations, even including two large fires in Nevada and
California.

In truth, I do not know the EXACT nature of how all of those
agencies get their information except that all of them state
they get it through their respective state patrols, various local
police, road construction crews and the supervising agencies
for road construction. None of them indicated or even hinted
at amateur radio or CB REACT as supplying "news advisories"
on anything. I'm sure that could happen but we haven't
experienced it, seen it. Considering that state patrols are
Out There 24/7 and that the various state transportation
agencies keep tabs on roads, waterways, and other modes
of travel 24/7...would the general public trust them (thousands
of individuals on the scenes) or a few radio amateurs who
just happened to be on some scene rather by chance?

The state police agencies have radios well netted together, as
do the road supervisory agencies, state and national part
rangers, and others. It is their task, work, and duty to report
anything that might affect the public. They do it well.

Now, if an alien invasion from outer space were to threaten the
general public, I'm sure that ham radio could help "advise" the
public and even repulse those nasty critters. A movie a few
years told all about how to do it... :-)

Of course, the could have used low-level modulation to produce a full-carrier, double-sideband signal then, too. I believe that some of them actually did.

>You really are a bit twisted over all this, aren't you Ed? You can't imagine
>that those reporting violations might have been concerned that the culprits
>were violating the law.

Of course I imagined that, Dick. Why else would they have complained to the FCC about rules violations? I am sorry I didn't make my understanding of that more clear, but I could not have imagined that someone would think that I didn't understand that people who complain about rules violations are concerned about the rules violations.

What is ironic is the end result. Personally, I think it unfortunate that the FCC didn't keep some higher-speed code testing while they had the chance. I think that their waiver problem would have virtually gone away if they had retained a 20 wpm code test that gave one access to the lower 25 kHz of 80, 40, 20, 15 and 10 meters.

From: CAM Cecil.A.Moore@IEEE.org

>How you can avoid correlating technical engineering with a technical hobby
>is beyond comprehension.

It would be no less accurate to describe Amateur Radio as a public-service hobby, or even as an international goodwill hobby.

In fact, I think that the public-service aspect of the service is the most important to our survival. When Steve Mansfield goes to DC to meet with Congressfolk, he does not talk to them about our technical achievements. The fact that Amateur Radio makes public-service contributions is the area they are most interested in.

ï¿½97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur radio service having a fundamental purpose as expressed in the following principles:

(a) Recognition and enhancement of the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications.

(b) Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art.

(c) Encouragement and improvement of the amateur service through rules which provide for advancing skills in both the communications and technical phases of the art.

(d) Expansion of the existing reservoir within the amateur radio service of trained operators, technicians, and electronics experts.

(e) Continuation and extension of the amateur's unique ability to enhance international goodwill.

Dick, I am curious; did you publish any of those original designs anywhere? I know that all of the ham magazines are always looking for new articles.

> Almost none of the early ham gear was, either.

I think that one would have to go back at least to the early 1940s for that to be true. Although I believe that kitbuilding is a type of homebrewing, that doesn't count in this context because virtually all of the kits were designed by engineers.

[They] (1950s hams)

> could have used low-level modulation to produce a full-carrier,
>double-sideband signal then, too. I believe that some of them actually did.

That's right, Ed. Various forms of grid modulation and linear operation were used by hams in the AM days.

But all of these methods suffered from the disadvantage of low efficiency. Typically, 35% was about the maximum efficiency obtainable with good quality audio. High efficiency linear amplifiers like the Doherty were unattractive to hams due to complexity and difficulty of frequency and band changing.

Efficiency was a concern of hams because the regulations of the time limited hams to 1 kW input power. A 1 kW AM rig using low level modulation could only produce about 300-350 watts carrier, while a high level modulated 1 kW rig could'
produce 700-750 watts carrier. Yes, it's only 3-4 dB, but it mattered to the hams
of that time.

Oddly enough, the rules change to 1.5 kW peak output reduced the amateur AM power level by about one half (typically 375 watts carrier)

All of the rigs I designed and built were built by a degreed electical
engineer. ;-)

Some of them were built before he got his degree, however.

> Almost none of the early ham gear was, either.

Same is true today. An EE degree isn't necessary to design and build
one's own amateur equipment.

> Sure,
> design engineers get paid to design whatever their employers decide they can

In some cases there's a connection and in many cases there isn't. EE covers a
LOT of ground, not just radio.

It would be interesting to know how many rrappers actually design and build
amateur rigs (meaning transmitters, receivers and transmitters, not just
accessories and such). An important qualification is that they do it as
amateurs, meaning their projects are separate from their work.

Lessee, there's me, W1RFI and W0EX. Anybody else?

Hi all:

After reading this thread for awhile, I went to the ARRL web site, and did a search on "eqsl", "e-qsl" etc. and I found a few mentions of e-qsl, but nothing that mentions that the ARRL is doing anything but thinking about accepting e-qsl's. So is this really true or is someone reading more into ARRL thinking about it than has happened yet.

>Element 3 (the current General). I thought that opportunity expired
>with the 2001 rewrite of Element 3 -- but not sure?

No, it hasn't. Element credit locked in by a license is good forever. For January, I think we had one of these to process. In December, my group had 3 - but we convinced one to try the Extra test and he passed that also.

>2... if you hold a pre-Feb 14, 1991, Technical license or a post-Feb
>14, 1991, through Apr 15, 2000, Technician Plus license, you are
>classified as Technician Plus until you upgrade or allow the license
>to expire beyond the grace period;

Or renew, since the renewed license will only say "Technician." At that point, one will have to bring the old license or CSCE showing the code element (from 1991-2000). Remember also that from 1991 to mid-1994, the FCC didn't print "Technician Plus" licenses.

>your Element 1 can be applied toward the General license when Element
>3 is passed.

True.

>3... if you passed the 5wpm after Apr 15, 2000, the Element 1 CSCE is
>valid for upgrade to General for 365 days, during which time you
>either need to pass Element 3 or ...

Correct, except, ON or after April 15, 2000.

>4... if you passed the 5wpm after Apr 15, 2001, the CSCE grants the
>Novice/Tech Plus operating privileges for as long as you hold the
>license; however, you will be classified as Technician, not Technician
>Plus.

Correct.

>5... if you passed the 5wpm after Apr 15, 2000, and Element 3 within
>365 days to earn General, I believe you may test for Extra based on
>holding General, not on the Element 1 CSCE?

No. One doesn't have to have the general class license in hand. Simply having the element credit for element 3 is sufficient to be tested for element 4.

Carl, it would seem that most would agree with you. (also TNX to Phil Kane for his input on this question) It has been determined by our club, however, that any unlicesed person initiating a call or ID'ing with another's call sign will be reported to the FCC, regardless if a control operator is present or not. While this seems contrary to the interpretation as understood by most hams who responded, it is a decision we will have to live with locally. There have already been confrontations to people who were not aware of our interpretation. Personally, I think it is unfortunate that we could not come to a common understanding on this issue because will likely be the cause of much trouble in the future. Even our own VE's are divided on this, as well as those VE's administering exams in adjacent counties. I thank you all who responded. Respectfully, JJ

4326. Re: eQSL's NOW ACCEPTED by ARRL for DXCC

Newsgroup: rec.radio.amateur.policy
Date: 2002-02-13 22:05:26 UTC
From: Charles Johnston <ctj92@cableone.net>
Message-ID: <3c6ae327@news.bnb-lp.com>

Hello John,
The real-low-down-skinny is that eQSL confirmations are now accepted at the ARRL - DXCC desk provided the eQSL web site "mail-a-card" service is used. Basically this way eQSL becomes a sort of qsl manager by verifying logs from both parties of a qso and then mailing out the card. This has never before been done and thus it is a '" news-item " for all DXers that prefer the economy, speed, ease, and fun of electronic qsl'ing. Statements to this affect are plastered all over the eQSL website including a copy of the email from Bill Moore at the DXCCC desk verifying that eQSL cards handled in this manner would be valid for DXCC.
It can be seen by some that this is a new approval, and a change in policy, by the ARRL since no electronic qsl cards of any type have ever been "accepted" before for anyone under any conditions. But..also since the ARRL is only accepting eQSL cards that have been mailed others can say there is no ARRL policy change as they are "still accepting" mailed cards. It can go either way.... Personally since nothing like this (electronically derived qsl cards) has ever been "approved" for DXCC before I see it as a "change in policy" by the ARRL.
Others disagree....be that as it may there is no argument that this is a real shot-in-the-arm for eQSL users and will very likely spin-off as more participation in the DXCC awards program to the benefit of the ARRL since only it's members are eligible for their own brand of awards. I see it as a win-win situation.....and..it most definitely is "something new" IMHO....

Actually, I don't know as I have ever operated a transmitter entirely of my own design. The 74S00 transmitter I used for much of my 250 mw QRP WAS was adapted heavily from a design published in 73 magazine. The TT2, of course, was designed by W1FB (then W1CER).

The ARRL Lab was once asked to build a chirpy rig so that one of our videos could tell the students what a chirp was. I decided that this was NOT the best assignment to give to Zack Lau, so I designed it myself. But I never put it on the air. Does that count? :-)

Why would I not be perceptive enough to understand why I am annoyed at you,
Dick?

This is really getting pretty wild.

Tell you what, though -- seeing as you think that I lack perception, why don't
you explain it to everyone else, so they can understand why you feel that
childish insults will make people want to learn code.

Bill and Carl must think that you are their strongest asset. :-)

to the
>hams of that time.

Matters today, too. Even QRPers sometimes want to squeeze out the extra watt.
:-)

But AB amps typically hit about 60% efficiency, if memory serves, while the
Class C amps typicallly hit around 75%. While 3-4 dB would matter, I am not
sure that 0.7 dB is worth all that fuss.

One should have been able to generate the AM at the milliwatt level, then
follow it by Class AB amps right up to the final, which would be able to run at
about 60% efficiency. Admittedly, the overall efficiency of the system would
not be all that great, but in terms of RF out, the final would have been the
limiting 1 KW DC input factor.

Just not as elegant as a plate-modulated DSP AM rig. :-)

The folks at eQSL solved two problems. Firstly they found a way to make their record keeping system of some value to some people. Without the document being submitable for credit, few people wanted them. They're too easy to counterfeit on the computer. Secondly, they found a way to make some money. By charging a dollar and then sending the card out at the postal card rate of 22? cents, finally they are in the black. Amateurs have been creating and mailing out electronically created cards for years. There is nothing new at all there except the process perhaps of 'ordering' the card on-line.

Chalk-up another acceptance for eQSL's......

Confirmation was received today from the president-elect of the
3905 Century Club that their awards program will accept hard copies
of eQSL's as confirmation. The hard copy can be printed by the
recipient on his home computer if desired, or you can use eQSL's service
to have them printed and mailed to you.

Either is OK for Century Club awards.

> DXCC.

However, if the sender of the QSL card objects to having Eqsls act as a
"qsl manager", they can notify the Eqsl and the DXCC desk
and then the cards will not be accepted for DXCC credit.

I have noticed a number of people requesting that their logs be
"returned" as they do not want Eqsl acting in this capacity. The prime
reason given is that the logs were sent with the understanding that no
money was needed (other than a donation. Now Eqsl wants to charge for a
contact (which is fine, I guess). but they "object" to having Eqsl
represent itself as a qsl manager for them without 1st asking.

Additionally, there is now the problem for those subscribing as to logs
from non legitimate managers and / or pirate operations being submitted.
How does Eqsl plan to handle types like HH2HM, who are notorious for not
only being the DX but also pretending to being the manager for same.
Nothing he manages counts for anything unless the legitimate operator
verifies this.

Lots a holes still. Although progress none the less..I guess

No, the ARRL is accepting QSL cards that have been approved by a quasi
qsl manager. This is not a change, as much as you would want it to be,
as it seems you posted substantial pieces of the pie, but not the whole

thing. Wayne clarified the ARRL/DXCC position on the 4 reflectors you spammed to and you still chose to ignore the complete picture.

It's more of a clarification as to acceptance of QSL from a qsl manager than a complete policy change... sorry Charlie ;-)

I will agree with most of this. I really doubt that the big time DX will e-qsl (maybe some ex-quam types for instance... Hi Jim!!!)) but for the most part, it seems cards are your basic DX varieties (Europeans, S. Americans, etc)

As I said in my email...you know me better than that. I really would rather not have plant stuff at all, but a live plant if one must--flowers die and they're ridiculously expensive! I'd rather kill a plant slowly over time...that's a joke...I don't have a green thumb! :)

Now, if my darlin' insists on sending just pictures of radios, tools, and gadgets (my favorite things to get for presents), then we'd have a problem. LOL

JJ: If I read this correctly, then the following:

Even though FCC R&R are not prohibitive of a Control Operator simply having to be present during the transmission of an unlicensed person operating their station, your club is going to choose to report such operators to the FCC??!!

Your club is, of course, free to do as they see fit...however, I can't help but interject that this is a huge, huge waste of time for the persons doing the reporting and certainly for the FCC. Don't you think such unwarranted action will have the FCC getting quite antsy about the credibility of your club?

The people you will be reporting are in no violation whatsoever...and you may find yourselves in the middle of lawsuit if you happen to "piss off" the wrong person who has enough money to play with. I know I'd take you to court for such action if I were a victim and had the money.

If I misunderstand what it is you are saying, then please accept my apology for the misunderstanding.

Kim W5TIT

Hello Ed, same stuff, different year. Since you seem to know where it all
ends up, why do you stick around?

How's the ARRL? The antenna modeling class looks like a winner. How was
the RFI class?

73,
Brian/N0iMD

ps: Hello gang.
Len, why? Stay well.
Cecil, do you still cw with the cranks? No wonder you force yourself to
dring spoiled grape joos.
Bill, you're still one of the nicest guys on here.
Dick, its nice to see the actuarial tables haven't claimed your callsign
yet. Has anyone thought of or offered to form a memorial club with your
call?
Carl, keep fighting the good fight.
Dave, how's "real" DX from the pile-up side?
Jim, are you still posting 5 pages at a time? ;))
Larry, I see that you still hate ham radio. Don't forget to renew your
license.
Steve, God blesses fools.
Jim, nice to see you being fairly reasonable.
Bert, well, what can I say?
McDick, I still don't understand anything you post.
Brian, still got it ALL figure out, doncha?
Kim, I see you're still poking your callsign in where it's not wanted ;^)
Crazy Steve, will the real DXpert please stand up? (steve remains seated)
KH2Jim, go ahead and stand up.

Mike Deignan, I guess we didn't need no steenking actuarial table to collect up all the excess callsigns.
CutieBoy, sayonara baby.
Eric June, wasn't anything left after converting CAM?
The wiccan General?

Sorry if I left anyone out.

On "EFFICIENCY (in finals, etc.):"

AM broadcast station KMPC here in the SFV runs 50 KW directly
into their towers. Judging by their RF envelopes, they peak to 80%
modulation (on commercials). Let's say their whole transmitter
station pulls 100 KW of electrical power from the DWP here. The
residential electrical rate in Los Angeles is about 12 cents per KWHr.
I suspect that KMPC gets billed as a steady industrial user on
electricity but let's figure what it costs the station just in electrical
power by the residential rate: 100 KW x $0.12 per hour or $12/hour,
the salary cost of a maintenance man (janitor to "paratransit
operators").

Okay, let's suppose Joe Ham is running a 1 KW input Class C final
that is 70% efficient. Joe is thus using 300 W dissipated as heat at

his residence and the per-hour billed electrical wasted power costs
him 3.6 cents per hour.

Harry Ham might be running a 1 KW input Class B final that is only
40% efficient and thus wasting 600 W as heat. Harry Ham is thus
spending 7.2 cents per hour to heat his shack, less than a nickel
more an hour than Joe Ham.

Considering that both Joe and Harry are consuming electrical power
for their receivers, exciters, lights, and other station peripherals, they
both are using a fair amount of electricity. It might be as "high" as
a dime an hour! Nonetheless, Harry Ham is spending only 3.6 cents
more an hour than Joe Ham...all due to that "inefficient" final of Harry's.

But is anything really wasted? Regardless of insistence on the desert-
like temperatures that are supposed to exist in Southern California, some
(thermal) heat is welcome in residences during non-summer days. :-)

Hmmm...maybe the counter argument is that the "wasted" heat is local
and "damaging" to the final itself? If so, the solution nearly always is to
add a fan/blower. Problem is, that fan/blower also takes electricity and
adds an increment of a fractional penny per hour in billing. What was
70% efficiency might reduce to a mere 69%! [horrors, inefficiency!]

As it turns out, Joe Ham is a boatanchor devotee and likes to run
tube equipment...Hallicrafters, Hammarlund, Collins (he is looking for
National right now) and refuses to budge from his "Class C is the best
and that's that!" position. All that peripheral tube equipment is, by
comparison to solid-state radio stuff, terribly inefficient! Joe's station
takes over 300 W just to run all those tube heaters with plates
averaging 3 W per tube over and above an equal-function solid-state
stage. But, by St. Hiram, Joe Ham is EFFICIENT in his final! :-)

Harry Ham is not a traditionalist, uses those despicable "rice boxes"
with all those transistor and IC thingies inside them, can just push-
button up a new mode without retuning his final's pi-net (doesn't have
one). No problem switching from OOK CW to SSB voice to data.
Harry isn't much bothered by "efficiency" of that "inefficient" final.

With warmest (from efficiency) regards,
Len

>impossible or impractical, just say so. Why all the excuses and beating
>about the bush?

The older ICOM radios using microcontrollers are NOT reprogrammable since their internal firmware is mask-programmed instead of using EEPROM or Flash memory. Given the different country markets with differing bands and band edges, new HF band assignments will be very expensive to cheapskates and cause them much whining, moaning, and bitching. :-)

If you do some checking of microcontrollers in current use (should be easy as a degreed whatever with good grades, etc., etc.) in modern ham rigs, you can find out directly if such firmware is reprogrammable or not. Instead of casting blame and implying ignorance, why don't you do the radio research and "show up" all the digital gurus? :-)

I can program in FORTRAN, Jimmie M., have done assembler code in three different microprocessor languages and am learning the instruction

set for some PIC microcontrollers. I've got four different shareware programs out there in Ziff-Davis program land and never had a single day of formal programming training. Gosh, if an unlicensed-in-amateur-radio person and supposedly-without-a-degree-electronics-engineer can do it, why can't you mighty morsemen show us all what kinda smarts ya got?

"Code" is code, isn't it? :-) {or are you a NOP? :-)]

With all kind regards,
Somebody

>He's the kind of guy who would cut off your nose to spite your face as
>long as it wouldn't get him all messy.

Jimmie K., what is "messy" about explaining what happened to about
10 million folks 8 years ago? What IS messy is that amateur radio
just wasn't up to the task in this area to handle what was a definite
EMERGENCY. Actually, amateur radio wasn't needed here then.
The professionals did their jobs well, were ready, and handled the
task.

Oh, and the telephone system was initially overloaded, cell sites
included. The pros didn't rely on the dial-up telephone lines; their
fixed leased-lines didn't go through any switching centers that
would be overloaded by a mass of callers.

I'm sure that an "old" news thing wasn't in your mind when writing
your non-reply, was it? I'm sure you were going to wrap yourself in
the flag and try to tie it into the horrible September 11 Attack on
American, weren't you?

I've posted on the 1994 Northridge Earthquake several times in here
BEFORE 9-11-01. It is a good case example of a sudden
emergency. Has nothing to do with the Attack on America. Has
everything to do with a REAL sudden emergency situation affecting
very large number of people.

If you subscribe to "CW gets through when nothing else will..." then
you have to add "...but it sure won't if it doesn't have any power."

Are you prepared as an emergency super-radioman?

>The people that live in the area you have chosen top slander had no such
>knowledege that one day something like this would happen.

Heh, spoken like a true believer in the east coast as the center of the US universe. :-)

Ronnie D., I spent the first 19 years of my life in northern Illinois and am familiar with snow storms every winter and a few tornados. The folks who remained in the northern midwest "KNEW" that winters would be stormy and emergencies could arise. The folks who live (not "leave") in the plains states "KNOW" about tornados and other disaster possibilities and remain there. The folks living (not "leaving") in the Gulf and southeast coast areas "KNOW" about hurricanes...and they choose to remain in their home area. My wife and I have a second home in Washington state near Tacoma...an area that can only be listed as having half-year endless precipitation. I have absolutely NO problem with other folks choosing their geographic residences for whatever reasons they have.

What I DO have a problem with is the geographic bigotry exhibited by some easterners in uncalled-for remarks of "left coast" or "smell from the west" and similar denigrations.

What I DO have a problem with is the dead-brained imagination that some amateurs do NOT need emergency training and preparedness but can immediately jump into "action" and "save everyone" with their miraculously-surviving-all-emergencies ham gear. That's just total bullshit thinking, bragging, fantasy pipe-dreaming.

The ARRL *HAS* begun some positive action with their classes (see their website) on emergency preparedness but they can't reach out and shake everyone mentally to get them set. The imaginator-dreamer-self-glorifying ham MUST learn that local

government agencies do NOT base their own communications on "cell phones ("which always go down in emergencies")." They have their own radio equipment and most agencies do regular training and review and planning for emergency contingencies, coordinating among their own agency divisions and volunteer groups that work with them on a regular basis.

I use the 1994 Northridge Earthquake as an extreme example of what can suddenly happen to a large populated area without any warning. The ENTIRE electrical power to an area of about 10 million population was suddenly cut off. BLACK at a bit after 4 AM after the first shaking. Were the hams in the local area prepared? I don't know any details of that except to say there was NOTHING in evidence. The public safety folks were ready, the PDs, the FDs, the hospitals, central government offices had emergency electrical power...even the utility folks who had to do lots of clean-up and restoration of service right away. All those organizations had organized themselves, trained themselves as a coordinated group, kept on with drills and preparedness and IT PAID OFF. The public safety professionals could be proud of what they did all over this area that January.

Emotionally-oriented and self-glorifying ham hero-wannabees don't like such statements of what actually happened and who did all the dirty work. They just want feel-good phrasing of how "heroic" they are and how they "can save the day" when "all the cell phones fail." They definitely don't like to hear about the (then) new FEMA sat terminals with multi-screen video billboards for immediate third-party messaging. They want to sit secure in front of their radios and computers and brag how they are such "supermen of the air" who will instantly jump into action and save everyone on the "next" emergency with their trusty, never-fail radios that survive everything. Yeah, sure. :-)

>I truly doubt that you have any regards, let alone kind ones
>
>No regard for you

Hey, "Ronnie D" whoever you are, screw you too. I'm not sorry if I disturbed your imaginary dreams of heroism or whatever compels you to get upset if someone throws geographic bigotry right back in your direction. I'll give praise to whoever does REAL emergency work, not those who can only quote very generalized claims of self-glorifying buzzphrases found mostly on ham news sites.

First, before you get too angry about all that, PARTICIPATE in some REAL emergencies. I've been in several in my life. I don't like any of them and don't wish to see another...but one thing I've learned from them is that the only effective way through is by PLANNING, ORGANIZATION, COORDINATION, DRILLS, always looking for ways to improve, trying to expect at least some of the unexpected.

Become a part of your community instead of sitting within the "amateur community" giving each other high-fives over a "disaster job well done" when the outsiders look on with questioning expressions asking "What done? Where?" Face reality.

Happy disasters to you,
Len

So how do you prepare for emergenies? Seems you leave that to others to
prepare and do FOR you. Maybe I'm wrong
but the impression is you are a taker as opposed to a giver.

If you don;t know of any details, how can you make a logical conclusion
then? Seems someone so
wrapped up in acquiring facts would have found some and then made logical
statement here. Looks more like going off without any facts.

The public safety folks were ready, the PDs,

On any given day, I agree that such reports likly have zero
reliance on hams. It is under the emergency situations when
hams become the added eyes, ears and voice to the area
inumdated by the disastor that some news/conditions/etc.
may be supported by ham operations.

> The state police agencies have radios well netted together, as

Agreed...on 99.99% of the days/hours. It is that
emergency when the help comes from hams (as well as
other entities).

I don't plan to, Jim. But I do plan to take the audio output from my IC-756
and input it into my DSP eval board for some experimenting. Virtually anyone
can do the same thing.

4361. Re: eQSL's NOW ACCEPTED by ARRL for DXCC

Newsgroup: rec.radio.amateur.policy
Date: 2002-02-14 03:19:17 UTC
From: Charles Johnston <ctj92@cableone.net>
Message-ID: <3c6b2cb2$1@news.bnb-lp.com>
Source record: 33871
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.policy

Hello John,
Did you visit the eQSL web site and read the email from Bill Moore of the DXCC Desk? I cannot speak for why the ARRL webmaster does or does not place what many believe to be important "news" on that site. You might consider emailing them. I would like to see their reply posted here.

My personal opinion is that they are reluctant to possibly steer anyone over to eQSL services since they (the ARRL) are going to launch the Electronic Logbook of the World ....one of these days.
It will supposedly provide for a 100% all-electronic qsl confirmation system that would feed directly into their own awards programs that would not require any paper-based qsl cards at all. However it looks like eQSL has done the end-around now by obtaining the "go-ahead" from Bill Moore himself that basically "allows" electronic eQSL's to be "accepted" for DXCC awards.

The eQSL system has many advantages over the yet-to-be-released Logbook of the World. With the LBOTW, once released and in operation, past qso's are not accepted. Not so with eQSL Furthermore....there will need to be digital signatures acquired and approved , as well as new additional ARRL fees (according to ARRL), and special ARRL- LBOTW software will need to be purchased or existing logging software will need to be upgraded (at a cost) to interface with the LBOTW system. There will need to spend $$$ spent and numerous hoops jumped through just to get only your recent qso's accredited. And of course don't forget you'll need to pay ARRL dues too....

None of this nonsense is required with eQSL.....they really have a better way and it shows already with the upsurge of acceptance (or call it usability) by various Ham Radio awards organizations. I don't chase awards anymore except for my own satisfaction and for ego-motivated "bragging rights" but I have to say I really get a kick out of the easy and automated way eQSL allows me to provide confirmations for any station I qso with...and now they are DXCC accepted too.....where is the down-side? I don't see it......

I just answered the question, Dick, but I still don't understand the
purpose of the question. I did lots of DSP experimenting without
changing the design of my IC-706. MY DSP eval board is not fast
enough to do IF DSP. It only performs well at audio frequencies.
That certainly doesn't keep me from experimenting with it.

All my DSP experimenting has been done at audio frequencies. I'm sure that a development system for '756 IF processing would be more than I choose to tackle right now. I will continue experimenting at audio frequencies, however.

Who's beating around the bush? The answer is obviously, "No", and your
question was rhetorical. All my experimentation has been done at audio
frequencies and I will continue to do so with audio from the '756.
One doesn't even need to experiment with DSP in real time. I did a lot
of experimentation using compiled BASIC in batch mode.

Does your "report any..." cover people operating
stations other than your club station?" Your club is free to
set any rules for its own operation as you see fit.

Have you ever actually reported one of your own...and if
yes, what was the FCC response?

> There have already been
> confrontations to people who were not aware of our interpretation.

Again, your option regarding your own club station...but that's
were your interpretation and control ends.

Who were Hundt's "bag carriers" at that time? Were they
Hundt's own people (staff) that he brought to the agency with
him? From what I heard, many senior and junior FOB staff at the
Washington HQ turned on, make that back-stabbed, their own
friends in the field, just to save their own skins from Hundt's
chopping block. I also heard the union was dealt with early on
by promising top union officers that their jobs would be protected,
in return for them not calling an impasse or throwing down any
other legal obstacles in the way of the Hundt steam rollers.
What a hell of a way to conduct the business of government, but
it is also the norm for life in the beltway.

Ronald

Well folks, there you have it. Cecil is so hung up on himself that he still insists that even engineers go through all the engineering motions. He'd like us all to believe they don't rely on standard references and uniformly optimised circuits for their equipment design. He's as out of touch as always. Even with his own profession.

Henry Ford was not a mechanical engineer. The Wright brothers were not
aeronautical engineers.

And just how did YOU know? Do you have radiosounding equipment set up to test the ionosphere?

> If you want to do that, Dick, be my guest.

Sure, Cecil, and in the process I'll be finding weak rare ones on 20 meter CW while you 'guess' the band is dead, since you relied on guessing the MUF based on the lack of the usual signal activity..

Considering that you took the cost for the ARRL's Logbook of the World into account, I'm somewhat surprised that you wouldn't consider shelling out $100 for an all-eQSL DXCC a downside.

Knock yourself out, Dick. I've never understood what the attraction for weak rare
ones really is. I would much prefer 5x9 armchair copy with a friend on the other end.
But different strokes for different folks.

That's exactly what I suspected, Dick. You didn't design anything. You copied someone else's design and odds are the design you copied was done by an engineer. Unfortunately, copying a design is not the same as designing. Building a kit is not designing. Sorry, you flunked the design test. I doubt that you have ever drawn a load line on a set of characteristic curves.

If you copied someone else's poem, would you then tell the world you are a poet? Get real!

>But AB amps typically hit about 60% efficiency, if memory serves, while the
>Class C amps typicallly hit around 75%. While 3-4 dB would matter, I am not
>sure that 0.7 dB is worth all that fuss.

The problem of amplifying AM voice is different, Ed. AB amplifiers are indeed capable of 60% efficiency at maximum signal, but their efficiency is lower as the signal level drops. In other words, you only get that 60% efficiency on modulation peaks. With no modulation (pure carrier) the efficiency is only about
30-35% for a conventional linear amplifier. This is the same efficiency as the various forms of grid/screen/suppressor/cathode/clamp tube modulation.

Under the old rules hams measured power input under unmodulated-carrier conditions. So at 1 kW plate input with no modulation, the 1 kW linear amplifier
or grid modulated stage only puts out 300-350 watts carrier. A 1 kW plate-modulated Class C amplifier would put out 700-750 watts carrier under no-modulation conditions. 3-4 dB advantage to the high-level modulated Class C amplifier.

Of course this is a side-effect of the way the old rules were written. The old 1 kW
rule conveniently ignored the fact that the modulator was pumping 500 additional
watts (in the form of audio) into the final under full-modulation conditions. The
linear amplifier or grid-modulated amplifier got no such consideration. The old rules had the effect of promoting the use of plate modulation and Class C finals.

>One should have been able to generate the AM at the milliwatt level, then
>follow it by Class AB amps right up to the final, which would be able to run
>at
>about 60% efficiency.

Nope. Not on AM voice with conventional linear amplifier designs. You'll get
60%
efficiency only on modulation peaks. 30-35% at carrier level. Of course you can
get more if you don't care about linearity.

>Admittedly, the overall efficiency of the system would
>not be all that great, but in terms of RF out, the final would have been the
>limiting 1 KW DC input factor.

Exactly. At 1 kW DC input the linear amplifier user can get only 300-350 watts
of carrier and 1200-1500 watts of PEP. The Class C plate modulated user
can get 700-750 watts of carrier and 2800-3000 watts of PEP!

Of course the "new" rules changed all that, and output PEP is all that matters
to the FCC now.

The cost of operation is only one factor, and a very minor one at that unless
one
operates a lot. First cost is another story!

None of this is new stuff - I learned it all back in my Novice days, before I
even
got into high school.

>Just not as elegant as a plate-modulated DSP AM rig. :-)

Some hams today are using pulse-width-modulated AM rigs.

>main straem news misses.

Must be interesting that "main straem news." :-)

Now, take a deep breath, hold it, get a sight picture, steady
yourself and squeeeeze that trigger without disturbing the
sight picture. No, no, no...you did it wrong again!! How can
anyone be so kill-eager and shoot so badly? Tsk, tsk, tsk.

>Class act NOT!!!!!!!!! I have only been here a week or so and have yet to
>see you praise anything other than yourself.

Poor baby. Tsk, tsk, tsk. Was this newsgroup created Just For
You?!? Nooooooo.

Several years ago this newsgroup was created (by others) to take
the "code issue" off of rec.radio.amateur.misc newsgroup. The
participants in what has become a Chat Room for the established
denizens claiming turf have to Choose Sides. If you are a pro-code-
test-advocate or PCTA you need several things such as an old
Germanic chant of "CW uber alles," a 1x2 call (nearly always a
Vanity one despite denials), a love for Olde Tyme Raddio, and have
the Amateur's Code tatooed on your mighty right bicep (ultra strong
from years of morsemanship and paddle flipping). If you are a No-
code-test-advocate or NCTA you must endure countless exchanges
of specious insults against yourself, your family, and your dog or
cat for ever thinking such hideous, heretical thoughts of actually
removing the code test! Horrors to St. Hiram!

PCTAs (in here) feel no regrets, no shame, about libeling any NCTA
up to and including charges of bad underarm odor!

PCTAs are Mighty Men Among Men, upholders of male domination,
misogyny, and malapropism. They do not need sex (horrors!) of any
kind since the very thought of 40 WPM rag-chews sends them on an
orgasmic Trip into outer space...or another dimension, whichever is
handy. Both usually are.

>Better stay on the west caost with the other wack-jobs...ooppsss geographic
>bigotry. I aplopgize to all the other
>west coast wack jobs for equating them to this poster from their area.
>Soeey

Yes, yes, now don't forget to police the brass. You've made a mess
in here already and haven't hit a thing...

>Sure you have. I'd be happy to review anything you might offer as factual
>for any particiupation you actually had
>in any emetgenices that you claim. Ihaven't seen anything other than the,
>how did you put it, prosteliziing, of a few weak minded fools??

Ummm...care to try that again..."particiupation"..."emetgenices"...
"prosteliziing"...? :-)

>I have and I see that you are not the nearly as sour as some of the lemons
>that have fallen off the tree..you are the king of sour.

Tsk, tsk, tsk. Such phrasing, such prose! :-)

>May many befall you so that you can actively participate in them. I think
>we're done here. You bring nothing but
>bitterness to the table.
>
>Still no regards to you.

Poor baby...all that ammunition expended and still nothing hit...tsk.

Try some practice shooting on a stack of dictionaries...or, if you are
up to, try to figure out what the SUBJECTS of message threads are
instead of twirling your three-guns and getting them caught in the

shirt sequins again.

Lennie the Licenseless attempts to wom his way out of another foot-in-mouth NG faux pas:

>> Ronnie D., I spent the first 19 years of my life in northern Illinois...(SNIP)

Ronnie, welcome to RRAP.

His Licenselessness, Sir Bigot of West Coast, otherwise known and "Leonard H. Anderson", is one of the most hateful, mistruthful and antagonizing bastards to ever handle a soldering gun.

Lennie believes that since he was a "profesional" radio technician at one time, he now has pomp and ceremony over all that is "Amateur".

Lennie does not have an Amatuer Radio license (there IS a licensee by that name, but it is not him...), yet he feels obligated to harass those of us that do.

Lennie is a liar. He has been caught with his britches down so many times that that rag-headed shock-jock in NYC look like a rank (pardon the pun) amateur.

Although he appraently has some working knowledge of electronics, he has NO apparent PRACTICAL knowledge of Amatuer Radio, although he once authored some items for a now-defunt magazine in the 80's.

By the way, I say "apparent working knowledge" of electronics because I am not at all sure his postings here are not simply others work for which he has taken in order to "impress" the denizens of this forum. He loves to cite countless websites as proof of his "arguments", however he has never demonstrated anything that vaguely approaches independent thought.

I also say "apparently" since he has steadfastly refused to take the Amateur exams. This no doubt due to the likelyhood of failure, and therefore public evidence of his incompetence at even rudimentary technology.

That he would make so arrogant a statement as the one he did vis-a-vis NYC and 9/11 is eveidence of his hatred and his callousness...And not surprisingly... He once spent several weeks in this forum villifying the many "homefront" volunteers of WW2 such as the Civil Defense, Civil AIr Patrol, and others.

On a side note, I note that "The History Channel" recently did a 20 minute piece on the Civil Air Patrol's war-time and post-war service, and not once did they mention how Lennie the Loser Anderson....Now HOW could they have MISSED that!?

>I haven't seen any examples of gepgraphic bigorty other than from you.

Chances are you won't. Lennie the Liar keeps repeating the Big Lie about ARRL secret agendas, "Lodge Hall" stories of how Extra Class licensees conspire to hold back other licensee's, and spends hundreds of hours making pages-long posts railing against ANYONE who shows the slightest temerity for daring to defy his overwhelming intellect (yeah...BIG intellect there.)

>> What I DO have a problem with is the dead-brained imagination that
>> some amateurs do NOT need emergency training and preparedness
>> but can immediately jump into "action" and "save everyone" with
>> their miraculously-surviving-all-emergencies ham gear. That's just
>> total bullshit thinking, bragging, fantasy pipe-dreaming.
>
>So how do you prepare for emergenies? Seems you leave that to others to
>prepare and do FOR you. Maybe I'm wrong
>but the impression is you are a taker as opposed to a giver.

He is, Ron...Very much so. Lennie has owned up to ONCE participating in a disaster as a volunteer...having NOTHING to do with radios, by the way. He currently has NO membership in ANY agency in any capacity relative to disaster planning.

And Lennie's rant above about "jumping in to the rescue" is so assinine as to be laughable.

Do you see why this guy is such a Putz?

>If you don;t know of any details, how can you make a logical conclusion
>then? Seems someone so
>wrapped up in acquiring facts would have found some and then made logical
>statement here. Looks more like going off without any facts.

Now you are getting the picture. Lennie's "facts" are third party stories and clippings from the paper. He has NO private nor professional standing in ANY emergency preparedness organization ANYWHERE.

>They just want feel-good phrasing of how "heroic" they
>> are and how they "can save the day" when "all the cell phones fail."
>
>You must read different news articles than most. You seem to come up with
>National Enquirer stories that most
>main straem news misses.

Except the FACT is that even before September 11th, the papers have been ripe with just such stories. Last year there were rampant floods in NJ and GUESS who was called upon to help several isolated and stranded communities...?!?!

(hint hint...it was NOT Lennie the Creep)

>Class act NOT!!!!!!!!! I have only been here a week or so and have yet to
>see you praise anything other than yourself.

Lennie's getting closer to that stroke that he know's is coming, Ronnie.
At least he took about a month to get me riled up. He's getting shorted fused
as the months roll on. Even those here who are in favor of "no code" policies
distance themselves from him.

He sent me several private e mails about his "position" on no code
matters, and when I privately (and subsequently publicly) that I didn't agree,
he started in on calling me a "jack booted thug", a "nazi", "elitest", etc.

>May many befall you so that you can actively participate in them. I think
>we're done here. You bring nothing but
>bitterness to the table.

YOU NAILED IT ON THE HEAD!!

Lennie made the error of trying to one-up me over a duty station I'd once
been at where Lennie had allegedly worked under contract. I called on some
friends who DO work there and a couple remembered him as a lack-luster,
ill-fitting pogue.

Furthermore, in the height of some of the most heated exchanges between
His Gutlessness and I, one fellow who lives in the same neighborhood as Lennie
dropped the dime on him to myself and several others via private e mail. He's
as big a loser in the eyes of his neighbors as he is here.

So....try to look past him. He lies, he antagonizes, and he is due for a
stroke, so let's let him be on his way.

As I said, if you refuse to acknowledge that professional engineers
routinely refer to standard circuit designs and design parameters, as
opposed to doing all their design work from first principles, you're
just blowing troll-smoke. But that is exactly what we long ago learned to expect from
you.

Vacation?

Get real Walt, take the up and coming Mellish Reef DXpedition (which I am involved in) for instance.

Do you honestly think a rough 3 day sail each way (real puke material) then 10 days of flat out operating to try and work as many "deserving" as possible under extremely harsh conditions, battling tick infestation and sleep depravation because of the incredible bird noise is a vacation???

...while you operate in the comfort of your shack.

Okay, leaving out the analysis part of Cecil's question, I am curious -- did
you design your own rigs or did you copy the designs of others?

The FCC wouldn't hire someone to give them an opportunity to do what is best
for any individual service.

Besides, from what I have seen Phil say here, the FCC was not always a fun
place to work.

And the real besides, is can you imagine Larry in a job that requires politics?

Anyone can do that, Krell -- but if I didn't change the message's subject
line, why did *she* open a message about "pornstars" that she just
accused *me* of being the only one who opened it? The only thing
my reply would have done is ad "Re:" to the Subject line. She still
opened it, while implying that I was the only one who did! I'm willing to
bet that I know at least as much about newsreaders as Kim does!

Cecil:

I like my job. It is both satisfying and relatively low-stress. I don't
think working at the FCC would be either. Moreover, to be involved
in policy matters, I'd have to live in a crime-infested stinkhole known
as Washington, DC, or some overpriced, overtaxed, Communist-
controlled suburb in God-forsaken Maryland. No thanks!

>Who's beating around the bush?

You were, Cecil, until you answered "I don't plan to". Then it was clear
to me. tnx.

> The answer is obviously, "No", and your
>question was rhetorical.

Not obvious to me at all, and it wasn't rhetorical. I'm used to ham rigs where
the
firmware can be easily swapped out. With your experience in digital design, DSP
and your long experience buying ICOM products it appeared to me that you
might develop new software for the '756. Thus the question.

>All my experimentation has been done at audio
>frequencies and I will continue to do so with audio from the '756.

Or any other rig that suits your fancy.

>One doesn't even need to experiment with DSP in real time. I did a lot
>of experimentation using compiled BASIC in batch mode.

Going that route, one doesn't even need an eval board.

You mentioned all the DSP implemented in the '756, and your eval board, as
if the latter would influence the former. But that's not the case at all.

>I did lots of DSP experimenting without
>changing the design of my IC-706. MY DSP eval board is not fast
>enough to do IF DSP.

Nor does it have anyhting like the dynamic range needed.

>It only performs well at audio frequencies.

many
> "homefront" volunteers of WW2 such as the Civil Defense, Civil AIr Patrol,
and
> others.

Be careful, you spelled evidence wrong. I wouldn't want Len to get anal on
you.

I've heard lots worse from people about 911. My point was that to compare
areas where people know the
risks involved with something like this was despicable. Obviously Len
needs to move around allot judging from his posts.

I guess people he lives near get tired of having a pompous ass living next
door and force him to move. I pity his
family if he even has one.

>
> On a side note, I note that "The History Channel" recently did a 20

> internal club rules?

Trouble has arisen because our repeater coverage extends into other counties where Part 97 is iterpreted differently. Other clubs' VE's tell their new technicians that its okay for them to let their sister or brother use their HT to try out ham radio as long as they are present as control operators. Then when they do it on our repeater, they get into trouble and a VE confrontation comes up because their VE's gave them "Mis-information" on the FCC rules. At the last club meeting, it was reported that field day exercises would be no different in interpretation of Part 97 than the day-to-day operations. I recently changed my mind about becoming a VE because I really don't want involved in this dispute, particularly since I believe our position is wrong to begin with. Respectfully, JJ

tnx, Bill.

> Does anyone recall when the exception went to 1000 MHz
> and then lowered further to 30 MHz?

The original 1000 MHz exception was adopted (I think) in 1947 at the Atlantic
City conference.

The exception was lowered to 144 MHz in 1959 (!) at the Geneva conference.

The current 30 MHz exception was adopted at WARC-79, best known for giving us
the 30, 17 and 12 meter bands.

So a nocodetest VHF only license that excluded only 6 meters was allowed by treaty as early as 1959.

WRC 2003 will likely see the exception lowered to 1 Hz.

I held back on posting this because I thought everybody knew it already.

They're working on something called "Logbook of the World". I've not seen
any details yet. It looks like a similar plan to eQSL's, but different.
You might find it mentioned as "LOTW" on search engines.

It is different. The eQSL plan is for the guy who runs the web site to
get your money instead of the mailman. The Logbook of the World plan
is for the ARRL to get your money instead of the mailman......

Both good plans. Especially with so many bored hams just waiting to
sign up......

Even with his
> own profession.

NO, Dick ... as ususal, YOU are the one who is totally out
of touch with reality. Cecil is not "hung up on himself" ...
```

he's merely trying to counter the ridiculous garbage you
spew about how nothing founded in technical fundamentals
and modern practice "matters" in ham radio.

As one who's been involved in designing RF gear and
chipsets for RF gear for 32+ years, I can ASSURE you
that virtually NOBODY designs "by the seat of their pants"
any more ... yes, we (who do this in the "real world") DO
"go through all the engineering motions."

Any engineer (and company) with any sense at all knows
(and this SHOULD apply to hams as well) that it is FAR
easier, cheaper, faster, and more accurate to design circuits
on the computer, simulate them, make changes in the simulated
circuit to "tweak" performance (if the simulation tool doesn't
automatically optimize for you), and THEN build the first prototype
as a "near production ready" model ... this method is also
applicable to small-volume or even "one-off" ham designs.

THAT is how it is done ... to assert otherwise, as you have
done above, merely shows that you don't have a clue as
to how things are actually done in "the real world." Cecil,
on the other hand, knows these things because he's "Been
there, done that, got the t-shirt."

It's simply easier to arrive at a clean, functional piece of
equipment that performs as desired/expected by using this
method than using the old "cut and try," guesswork method.

I don't refuse to acknowledge that, Dick. Engineers copy circuits all
the time. But they don't have the balls to turn around and claim that
they designed it. To do so is simply plagiarism. Who do you think originally
designed those circuits that are being copied? Odds are, it was an engineer.

I ask again: If you copied someone's poem, would you then announce
to the world that you designed the poem? Have you ever done an
original electronic design?

I relied on standard circuits and references. You know, the sort of stuff found in the ARRL handbook and a variety of other sources, of course. No, I am not an engineer, and I know that. I have also known some engineers who designed junk. I have had the job of correcting some poor engineeering designs. Cecil's assertions that none but engineers are competant to design is as flawed as his other trolls.

Crawl back under your rock Squiggy, who let you out this time?

You do it however you like, ignore standard references and commonly
published circuits if you wish (or claim that you do
to avoid truths on newsgroups). I'll do as I wish to make my one-
only ham gear.
The lame claim that one has to do all the basic
research to actual design a ham rig is ludicrous and you ALL know
it.

Download Digipan (better yet, MIXwin, and get 'em all) and play with
that visual "waterfall" display under varying conditions of RF gain.
Probably second best to good hearing.

So when one refers to a comprehensive source to check on an oscillator
circuit, then he is plagarizing if he decides to incorporate that circuit into a
rig he is DESIGNING and building? You sure are
running out of valid arguments, aren't you? (Of course you've been
out for a long time anyway).
And there is NO WAY you can show
that any of the standard circuits were engineer-only designed. Was Mr Colpits an
engineer? Mr. Hartley? Was Mr. Pullen? Want to prove that all the standard
references have had no input from non-engineers? Have at it. I live in the real
world.

Most non-engineers who have had extensive experience in
electronics
have seen multiple cases where design engineers really screwed up
to the point that some non-engineer with EXPERIENCE had to clean
up the resulting mess. That group includes me.

> for logical points. Concentrate on them. If you can't come up with a
> logical counterpoint, then, maybe they were right?

Are you serious? What would be the
logical counterpoint for lying-outright
total fabrication- about someone simply
because the someone happensfrom long
experience on the subect of RADIO
COMMUNICATIONS to understand that
basic radiocommunications, as in
radiotelegraphy, can be
important to ham radio operators?
Because of that singular fact, they
-both- have lied extensively
about both my motivations and
qualifications in radio. They have
-both- accused
me of insisting that ham radio 'stay in
the dark ages' because I insist all hams
should use only CW -an Absolutely false
assertion- when all the while it is ME
who actually is using the digital
modes on the air while Carl yaks into
his microphone and Cecil plays with his
DSP evaluation board! It's ALL a damn
lie, and they know it. You should know
it as well.
They keep hammering at the same lies
over and over until YOU believe
them! It's amazing!
That makes them -both- a total insult
to ham radio, and you, I'm sorry to
say, an accessory. Deceiving liars can't
be trusted with the future of ham
radio. Do you disagree?

> Don't try to argue
> against arguments that don't have a logical counterargument. That's my best
> advice.

So then it isn't logical that
radiotelegraphy is the most basic mode
of radio
yet devised, usable under conditions
where other modes may not be available
or
those which may be available won't get
the job done. I see. For, you see, that
is and has always been my contention,
and for that contention, which they can
NOT counter realistically nor
effectively, they mount a most personal
campaign
of falsehood to show me as unqualified
to hold ANY valid technical opinion. You
are proof that it seems to be working.
That's too bad.
You are a relative newcomer to the
hobby, and I appreciate that you might
be
interested in the experiences of older
hams. But that won't counter Cecil and
Carl and their falsehoods. So long as
you ignore their efforts and then
proceed
to send out messages like that one, it
appears that they win.

Good luck. With friends like them you
won't need enemas.

Again, Dick insists that anything resembling modern
design techniques, practices, and principles are
"irrelevant to ham radio" ...

This seems to me to be a perfect example, on Dick's
part, illustrating the "dumbing down" of ham radio
that Dick so frequently laments ... the refusal to learn
and take advantage of technological progress. Too
bad he can't recognize that he's a part of the problem,
not a part of the solution ...

Your gratiuitous insults still don't (and never will) change
realities, Dick ... no matter how steadfastly YOU refuse
to accept reality.

> You do it however you like, ignore standard references and
commonly
> published circuits if you wish (or claim that you do
> to avoid truths on newsgroups). I'll do as I wish to make my one-
> only ham gear.
> The lame claim that one has to do all the basic
> research to actual design a ham rig is ludicrous and you ALL know
> it.

Nobody's talking about "basic research" ... that's an entirely
different field from day to day equipment design. However,
since you don't understand the difference between doing your

own original design and copying someone else's circuit, I
wouldn't expect you to understand that distinction either.

As Cecil pointed out, your approach of copying circuits
or projects published in books, magazines, etc. is NOT
"design."

In fact, as Cecil stated, it's no more "design" than plagerizing
someone else's poem from a book is "writing poetry."

You are certainly free to build ham gear for your own use
by copying circuits published by others ... however doing
so does not qualify as "designing your own gear" any more
than building a kit designed by someone else does ...

Not if he gives credit to the designer. But when you say you designed a rig,
without giving rightful credit to the actual designer(s), that is plagiarism.
Virtually anyone can copy circuits from "a comprehensive source" and that is
not "design".

> And there is NO WAY you can show

Dick, have you any idea what, "Odds are", means? I said, "Odds are, it was
an engineer" who originally designed those circuits. And, as usual, you
take someone's statement and twist it to imply something that was not
originally implied. You are your own worst enemy.

> Most non-engineers who have had extensive experience in electronics

Nowadays most drafting is done on computers. Also most calculations.

What my previous answer indicates is that I only calculated things like delay
and phase shift when it was necessary to a rig's design. Always looked at the
device characteristics, though.

Many defenders of the CW testing requirement imply that CW would die if the test were eliminated. (PLEASE stick to this particular argument in this thread.)

Has interest in Morse Code been nosediving since the introduction of the No-Code Technician license or the restructuring of 2000? If the test were so crucial to preserving CW, then why is high-speed CW still popular among DX chasers, contesters, and QRPers?

I think that if the Morse Code testing requirement is eliminated, interest in CW would actually increase. More people would operate on the HF frequencies, and a significant percentage of the newcomers would discover CW at some point in their ham careers. Those who become avid DX chasers, contesters, or QRPers would be more likely to turn to CW.

In my opinion, CW should stand on its own merits and not require a testing requirement to "support" it. Given the popularity of CW, especially in certain parts of ham radio, I think it can. After all, SKYWARN, ARES, and RACES manage to survive without the "aid" of being mandatory for license privileges.

Because those people know how to use code.

Could be. I used that argument for dropping the requirement from 13
down to 5 WPM. We should already be seeing some of the increased
interest in CW. Anybody know if we are?

4429. email from ARRL - president - eqsl's and DXCC !

Newsgroup: rec.radio.amateur.policy
Date: 2002-02-14 21:26:37 UTC
From: Charles Johnston <ctj92@cableone.net>
Message-ID: <3c6c2b8c$1@news.bnb-lp.com>
Source record: 33790
Cross-posted to:
rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.swap

Hello interested Hams...

I have had some interesting, courteous, and informative emails with the ARRL president Jim Haynie, W5JBP concerning the recent flap about eQSL acceptance for DXCC.

Jim was also nice enough to forward to me in-house ARRL email from Bill Moore to Jim which goes a long way to further explain the likelihood of eqSL cards being accepted for DXCC as eQSL web site now states. Jim has asked me not to include the actual verbatim email from Bill..but has encouraged me to post "just the facts as Bill has laid them out" (Jim's words to me) .... and so to the best of my abilities I'll do that now....if you want to skip ahead I can tell you it still looks like eQSL cards can be and will be accepted by the ARRL as long as some important steps are taken....

Here are cut and paste excerpts from Bill's email to Jim....
---
1. It seems people have not read the entire message, especially the part that says "acting as QSL manager". On his site I see where he has OK for sending e-QSLs, not paper QSLs.In order for us to accept anything from him we would need a letter from each station he "manages" authorizing this

2. Then, we'd need something better than his word that he is verifying logs each time a request comes in (something we do not think he will be willing to do with all the stations he has logs for).

3. The requesting station must send information listing the specific QSL information then the manager must check the log for it. I believe the term for not doing this is pre-emptive QSLing.

4. As I have mentioned to all who have written, that ARRL has not changed its policy in any way regarding electronic QSLs.

---
end of cut and paste.....

>any more ... yes, we (who do this in the "real world") DO
>"go through all the engineering motions."

Quite true and usually unknown by those who have never done the actual work for pay (professionals) or for themselves (hobbyists). While I've never been able to work on the chip level (does thin-film count? :-), forty-two years ago when I did my first design work and 82 years ago when the very old-timers did their first radio design work there were only three basic configurations of amplifiers: Grounded-cathode/emitter/source; grounded-grid/base/gate, and grounded-plate/collector/drain (aka "cathode follower"). Nothing basic changed during the introduction of the transistor and then the field-effect transistor. Basics are basics. I'll "flesh out" some items for the benefit of other readers, Carl, we and Cecil and a few others here know how it is done.

Oscillators have only three basic configurations, named for those who first wrote them up as academic papers: Pierce, Colpitts, and Hartley. Some variations appeared later as the Clapp and Butler; the Butler much later as quartz crystal technology improved for reliable overtone operation. An oscillator is basically a self-limiting amplifier of gain just above unity having positive feedback.

All the diagrams have appeared in texts from many sources for years, enough so that those who bother to learn their appearance can recognize them visually on paper. From there to actual working hardware is an ENORMOUS area of effort involving many different sub-disciplines in electronics to achieve bandwidth, feedback, gain in both magnitude and phase, stability, power demand, noise criteria necessary to fit the overall system specifications. THAT is the design process. No designer need go to "first principles" and do an amplifier stage design from total scratch; those "first principles" have been worked out long ago. The design process needs knowledge of dozens of sub-disciplines to translate those "first principles" into working hardware.

Case in point, an octave bandwidth amplifier at HF (2:1 frequency range): How to achieve the bandwidth is basically a choice between broadband transformer coupling or by a "wide" bandpass network (there are some other ways but this isn't a book). For either requires knowledge of the active device impedance or admittance, the source and load Z or Y, the coupling network Z

or Y. [S-parameters utilize Z and Y] To achieve a required gain requires matching all the Zs and Ys for maximum power transfer. The active device characteristics, whether manufacturer's "typical" data or measured-separately, need to be known to determine the power supply requirements, voltage breakdowns, maximum current handling ability (minimum current necessary for portable, battery applications). Add to that the strays and parasitics from the need to physically mount and hold the components, which affects the mechanical-environment requirments. On top of all that is the temperature environment and its affects on all the electrical parameters of everything...which must all fit together ("room temperature" is simply a baseline thermal point since working temperature may be remarkably different within an enclosure).

For relatively narrowband amplifers there are many "first principle" networks (already worked out) to use as coupling but even those cannot be applied directly without considering the changes from different Z and Y characteristics of ALL immediately-associated components and active devices, including "chassis strays" and possible changes over temperature. Physical inductor Q is low enough to affect some networks more, some networks less; the designer has to account for which network and know the range of available inductor Q values.

The simple biasing of a single transistor stage needs to consider all factors such as the base-emitter junction varying 2 mV per degree C and the resistance tolerance and effect of that tolerance in regards to which bias configuration. Those bias resistors will cause some change in the stage's input impedance which reflects on the driving stage. Each bias resistor has some end-to-end capacity which has an effect on total interstage Z at higher frequencies.

>Any engineer (and company) with any sense at all knows
>(and this SHOULD apply to hams as well) that it is FAR
>easier, cheaper, faster, and more accurate to design circuits
>on the computer, simulate them, make changes in the simulated
>circuit to "tweak" performance (if the simulation tool doesn't
>automatically optimize for you), and THEN build the first prototype
>as a "near production ready" model ... this method is also
>applicable to small-volume or even "one-off" ham designs.

I think it's fair to point out here that designers using computers in CAE applications have first to know what affects what in a circuit before doing any virtual tweaking of values. There are NO computer programs YET that "do the design for you (us)" regardless of the software claims. [this includes programs such as National Semiconductor's "Simple Switcher" buck-boost IC "design program" that finds component values for a specific switching IC...a free for download package by the way]

The designer must input the circuit that he or she designed. Circuit simulation is a tool for verifying operation, good or bad. Optimization is a necessity for large production runs where all component tolerances must be considered for subsystems that do not allow a multitude of trimmer adjustments to handle those variables. Computer programs handle the rote tasks of sometimes-gigantic calculations to find frequency/time responses, doing in seconds what would take a designer days and weeks of pad-pencil-pocket-calculator work.

>THAT is how it is done ... to assert otherwise, as you have
>done above, merely shows that you don't have a clue as
>to how things are actually done in "the real world." Cecil,
>on the other hand, knows these things because he's "Been
>there, done that, got the t-shirt."

The professional world has a nasty thing called a "design review," a periodic meeting where an assigned designer has to explain and show his/her work before a panel of experienced higher-level staff who have also gotten plenty of "t-shirts." My first one was years ago with a simple assignment that was straightforward, no problem. I watched a long-timer trying to bluff his way through part of the explanation only to get nailed almost immediately by the reviewers (they had seen this sort of thing before). Let's just say his t-shirt got rather ripped in the process, a damn good object lesson for everybody else to learn. Bluffing, tall tales, and smokescreening doesn't work there. On a following project I had a larger assignment, had some difficulty with one part of the work, admitted it, could explain the problem, and got help almost right away with several useful suggestions plus a mini-review in the lab that found an alternate solution.

Fraternal orders have a tradition of copious quantities of tall tales, bluffing, and outright bullshitting others. Might work with people but physics and the hardware can't be fooled. :-)

>It's simply easier to arrive at a clean, functional piece of
>equipment that performs as desired/expected by using this
>method than using the old "cut and try," guesswork method.

Carl, if we have to coexist in an environment where a bus driver must be called a "paratransit operator," the above method has to be called "empirical data derivation" or other multi-syllabic BS. :-)

Either way, if we don't love and cherish morse code nor respect, admire, or revere the morsemen we get labels of "dumbed-down, stupid, ignorant" and "don't deserve to be in ham radio." :-)

I'm not sweating the last...got too many t-shirts already. :-)

>Even with his
>own profession.

It actually is the case that "engineers normally go through all the engineering motions" when doing a new hardware design. While engineers are as prepared as anyone to copy when they can, if they're doing a new design it is usually because the semiconductors available have gotten better, or they're trying to get higher density if they are doing ICs, and changing these constraints has a way of changing everything else. Note that optimizing your own circuit designs is easier than it used to be since computers do a lot of the heavy lifting, though the cost of the design packages I see them using is such that it would by hard to justify for anything other than commercial design work.

Software engineering isn't like this, actually, not only are the tools usually cheap but there the art is to write it so you can reuse as much as possible for as long as possible. Hardware guys seem to end up doing everything from scratch, and are high maintenance in terms of the tools they need.

4433. Gee, the President of the USA recognizes the ARS for what it is

Newsgroup: rec.radio.amateur.policy
Date: 2002-02-14 22:41:22 UTC
From: "Ronnie D." <ronaldd@yahoo.com>
Message-ID: <m2Xa8.7834$qt6.714606@newsread2.prod.itd.earthlink.net>
Source record: 33794

From the ARRL Amateur Radio News 2/13

Florida amateurs recognized for role in President's ham radio appearance: ARRL Northern Florida Section Manager Rudy Hubbard, WA4PUP, has awarded plaques to the amateurs involved in arranging for President George W. Bush to speak via ham radio January 31. Recognized for their contributions were Cliff Fraser, KE4HIY; Volusia County Emergency Coordinator Joette Barnett, KG4HPN; and John Schmidt, AF4PU, who operated the station over which Bush spoke. The plaques commend the three for providing or assisting in providing the station. Bush addressed members of the Northern Florida Amateur Radio Emergency Service Net (NFAN) on 75 meters while he was in Florida to spotlight five volunteer groups--including the Volusia County Amateur Radio Emergency Service (ARES)--for their value to the new Office of Homeland Security. "I want to thank all the volunteers who help make sure that Florida is prepared for any kind of emergency," the president said in part.

But of course,there will be some nameless west coast types who won't recognize this as factual because it's not main stream news...

>We should already be seeing some of the increased
>interest in CW. Anybody know if we are?

A reasonable way to guage that might be to do a listening survey of the HF bands. How much 5-10 WPM activity is there? If none, then I think it safe to say that the 5 wpm test is not attracting much CW use.

One might argue that some 5 wpm folks are put off by the 20+ wpm that many of the CW ops use, but there are now enough 5 wpm tested hams with significant HF priveleges that they could be on the air talking to each other on CW if they wanted to try the mode.

>The Logbook of the World plan
>is for the ARRL to get your money instead of the mailman......

Just to clarify a couple of points. The ARRL does not intend that there be any charges to upload the data.

The charge to use a datum for an award is going to be less than the postal service would get, and a LOT less that the customary number of greenstamps.

I don't think this will end up being the proverbial cash cow. Even if it is, as long as they buy the ARRL lab the new oscilloscope I will think the money well spent. :-)

Ed, when you gaduate you'll be able to get on r.r.a.a. with the big boys (just kidding). There are plenty of OF's there as well. The last thing I read on rraa was some negative stuff about "flag waving" and "flag wavers." Now everyone wants to wave the flag. Probably frustrates the hell out of them.

Sorry about missing your vacation. How long were you gone? I think I've been gone about a year. And from the look of things I haven't missed too much.

Well said. Your experience seems very familiar. Your
response to the situation is very familiar. I would bet
that Hundt's crew probably hired Arthur Anderson to tell
them and congress what a good job they were doing also.

One point of disagreement, the fall of the FCC was a
bipartisan effort. Hundt was an operative trying to satisfy
Gore, Tauzan, Gingrich, et.al. After the 911 affair I would
bet that the "new" field group stays busy scurring around
trying to get federal warrants to tap our internet and cell
phone traffic. From some of the behind the scenes stuff I
have heard about, even R.R.A.P. is probably considered a
subversive breeding ground. ;-)

Good luck with the Savi work. I see this as the greater
threat to 70 cm surpassing the Little LEO attempted grab.
The ARRL had better dip into that $400,000 war chest or
there could be big trouble.

As you know interference is a two way street. If they get
70 cm for RFID, which is very likely, and my VHF DXer friend
down the street turns his 70 cm 10,000 W ERP beams toward
the airport, and several bags are left laying on the tarmac
as the plane taxis out, guess what? Oops there goes another
band necessarily sacrificed to "homeland defense".

Many of your current members are too young to remember that
Part 97 was entirely suspended during WWII, and some of it
was long time coming back.

Bigger liar? Larry, when when when have I ever lied? Suppose you can't
come up with an example of that, either, among all of your ridiculous
claims.

As to your being the only to respond to the "pornstar" message, yes you
were. I don't know anything about the subject line changing, because my
post was a direct reply to *your* response to the original message. I
skipped that message the first night I noticed it on the newsgroup. Then
(as expected), opened it when I saw your name as a poster to the first Re:
message. You do know that Re: means "referencing" or "in response to,"
don't you? Gosh, maybe you don't.

Yep, you were the first and the *only* newsgroup person in RRAP to respond
to that message. Uh huh. Sorry you can't accept it...hell, you're the one
who did it, what ya want me to do 'bout it?

Kim W5TIT

4446. Is ARRL going the way of ENRON??

Newsgroup: rec.radio.amateur.policy

Source record: 33906

As most may have noticed, latter day testimony has shown that ENRON's top guys applied the mushroom theory of management to their own employees and shareholders. Now, according the blurb in QST, the Newington Crowd has decided to delete the BOD minutes in fine print from QST to save APPROX. 12 PAGES OF QST PER YEAR. The stated reason is that falling revenues and increased postage requires cost cutting. Is this for real? To cover this change, it states minutes will be published on the ARRL web site. Could it be that the Newington Crowd has been inspired by the wildly successful escapades of the recent world's 7th largest company to also adapt the mushroom theory? Lets see, how many of the membership have handy internet access or use internet access to keep up with the BOD?

Ooooo, hey, speaking of QSL cards: Cliff (my hubby) just got a "batch" today from the--what is it called, QSL bureau or whatever at the ARRL. Not only did he get one card that the QSO was from back in 1999, the others were from the year 2000!!!!! Man, remember when Jim was asking me about whether I logged the US stations I contacted during the one weekend where I worked all but about 3 states in the US...I guess for some kind of proof?! I could go for the logging, but anyone could lie on a log, right? If QSL cards are used as some kind of "proof" about getting a station, one could be DEAD before they ever see a card...LOL

Another neat thing about 6m....it defies the routine indicators
at times and offers great DX when no one is expecting it.

Good grief, Larry, Steve (to whom your original offense was directed) was
talking about *his* daughter...not some strange kid in a store somewhere.
Are you *that* offensive that you think it's OK to experiment with getting
that familiar with a complete stranger?!

Interesting...and just HOW do "they get in trouble?" If I
was in your neighborhood driving with my child in my car,
just HOW does anyone from your club know if the
speaker is the licensed party or not. Even assuming your
club did, the report to the FCC would be a joke.

> At the last club
> meeting, it was reported that field day exercises would be no
> different in interpretation of Part 97 than the day-to-day operations.

As before...your club can enforce ANY limits it wants on
its own operations...I'd laugh hysterically if your club
tried to enforce the same limits on other operators at
other field day sites.

So I'll ask again...has your club actually "reported"
anyone based on your club's self determination as to
what constitutes the violation if a non-licensed person
calls CQ and IDs as the station?

>

Maybe this will help you, Larry. My "newsreader" is the newsreader provided
by Outlook Express. When I open Outlook Express, I check my mail messages
first. The only newsgroup I am subscribed to is rec.radio.amateur.policy,
of which the name appears in a list. I have the CURRENT VIEW setting set to
"Hide Read Messages." When I go down to the name, rec.radio.amateur.policy,
my newsreader "logs on" to the group and downloads unread messages. So, if
you can stretch your imagination just enough, I get a "list" of new, unread
messages. I have the messages sorted by "Sent" and they are nested by

thread or anything like that. So, when I look at my list I see the Subject Line, From, and Sent, in that order.

Stay with me here. The first night that message appeared...at least on my newsreader...at oh, I guess around 10:00PM, there was ONLY that message. I skipped reading it. I skip a LOT of messages. Before I exit my newsreader each time, I choose EDIT "Mark All Read" so that the same damned messages I deliberately skip don't show up again the next time I download.

Ya got it so far? So, I skipped the first night. The NEXT night, I see *YOUR* name, Larry Roll K3LT, in the "FROM" column, next to that same message Subject line, EXCEPT...the Re: has been added because you REsponded or REplied to the post.

I don't know how to get much clearer than that. I did open the message when I saw that you had replied to it...which meant you *HAD* to have opened it in its original form. By the way, as I was clicking on your post, I was ROFLMAO....

> many of the membership have handy internet access or use
> internet access to keep up with the BOD?

According to polling (filtered my increasingly unreliable memory) somewhere
arond 90-95% of ARRL members have internet access. As for the second part
of the question, I'd ask how many people use actually *QST* to keep up with
the BOD?

QST is in the unfortunate position of having to trim costs out of
somewhere. DXers had their portion cut a couple years ago, and currently
the ARRL is eyeing cutting out Section News and some contesting content
(linescores and rules in particular), moving those over to the web. There's
been loud wailing and gnashing of teeth out of both camps.

But taking the minutes out - you'd think that'd be fairly non-controversial
and also one of the easiest ways to start cutting costs (I'd also suggest
going back to B&W and smaller type, but I digress). And, truly, it is.

Hey, Krell, did the subject line change? I have no idea... Oh, wait, let
me change my view to Show All Messages and I'll sort them by date (baffling
the Hell out of Larry now, I bet), BRB

Nope! Original post: "We want to be pornstars" posted by
nicky18@freesex.net on 2/11/02 at 3:33PM. Where is Larry getting that the

Subject Line changed?! He doesn't *really* think that *I* changed and added the "Re:" to it, does he? ROFLMAO if he does! Maybe he just learned something new.

Dick,
I'll even give you that one...BUT, the next
bit of logic is to apply the relative importance
of code in general...and that is where the FCC
and many others are totally unconvinced that
code has any continued need for a test as a
requisite element to operate HF (IMHO).

> Because of that singular fact, they
> -both- have lied extensively

> the job done.

Assuming both points are valid...neither,
nor both sustains a sufficient rational to
keep code testing as an amateur requirement.
THAT is the issue. You are free to believe otherwise...
and you are free to make that case to the FCC.
Those that differ with you (as I do) are also
free to disagree and make counter claims/arguments.

> I see. For, you see, that
> is and has always been my contention,
> and for that contention, which they can
> NOT counter realistically nor
> effectively,

I guess your "contention" didn't hold sway
with the FCC NPRM 98-143.

> they mount a most personal campaign
> of falsehood to show me as unqualified
> to hold ANY valid technical opinion.

Strange, I don't recall any such personal campaign
being submitted to the FCC to show you as being
unqualified to comment.

> You are proof that it seems to be working.
> That's too bad.

Frankly, Dick, your own words do you more
harm than anyone else's (IMHO of course).

> You are a relative newcomer to the
> hobby, and I appreciate that you might
> be
> interested in the experiences of older
> hams. But that won't counter Cecil and
> Carl and their falsehoods. So long as

Logic alert, logic alert...

They (Carl & Cecil) win because
he (Jim) has ignored their efforts yet he (Jim) sends out
the message he did? Cause/effect there seems to
be significantly missing.

> Good luck. With friends like them you
> won't need enemas.

As I said....
Dick, your own words do you more
harm than anyone else's (IMHO of course).

Krell:

You've proved nothing, either. The subject line was still about
"pornstars." Kim accused me of opening the message, then did
the exact same thing. It doesn't matter if she recognized my
name or not -- she did the same thing she accused me of doing,
and probably opened the original message and went to their
web site just to see what they had to offer! All I did was give
them a quick slam-dunk, and predicted Kim's response almost
to the letter. However, I'm sure Kim appreciates your ardent
support.

Ed:

From my own experience, I'd say that there is little or no 5-10 WPM CW activity. Many times I make a 5-10 WPM CQ (on the FISTS calling freqs., since the Novice/Tech segments are essentially vacant these days) and usually get answered by some octogenarian in Florida with a W2- or a W8- call sign, running his words together with a mal-adjusted Vibroplex bug at around 30 WPM. What is *your* assessment of 5-10 WPM activity?

>One might argue that some 5 wpm folks are put off by the 20+ wpm that many of

Yup. Wish I could find some of them, I'd really like to crank down my keyer and work them, if only to encourage them to keep it up.

Source record: 33923

In article <f7d9a152.0202141110.249424ab@posting.google.com>,
jason_hsu@my-deja.com (Jason Hsu) writes:

>Many defenders of the CW testing requirement imply that CW would die
>if the test were eliminated. (PLEASE stick to this particular
>argument in this thread.)

Jason:

Under the former licensing requirements, more hams became regular
CW users because learning the Morse code at a useful proficiency
level was unavoidable, if maximum HF privileges were desired.

>Has interest in Morse Code been nosediving since the introduction of
>the No-Code Technician license or the restructuring of 2000?

I'd say it has reached a fairly stable plateau. However, in the absence
of a mandatory 13- or 20-WPM code test requirement, it will fall off
in the future.

>If the
>test were so crucial to preserving CW, then why is high-speed CW still
>popular among DX chasers, contesters, and QRPers?

Because, at this point in time, there are still a lot of hams who possess
Morse code skills, as a result of the former testing requirements.
Certainly, a number of newcomers will learn and adopt CW as a
regular operating mode, but not in the same high percentage as was
the case in the Pre-Restructuring Era. In the fullness of time, I'm sure
we will see CW usage diminished to a fraction of it's present number
of participants.

>I think that if the Morse Code testing requirement is eliminated,
>interest in CW would actually increase. More people would operate on
>the HF frequencies, and a significant percentage of the newcomers
>would discover CW at some point in their ham careers. Those who
>become avid DX chasers, contesters, or QRPers would be more likely to
>turn to CW.

Let's hope you're right -- but I for one am quite agnostic on the notion
that any significant number of future hams will be drawn to CW without
the incentive of a licensing requirement.

>In my opinion, CW should stand on its own merits and not require a
>testing requirement to "support" it.

I respectfully disagree. CW usage will decline due to the fact that
the vast majority of future hams won't bother to learn it on their own

initiative.

>Given the popularity of CW,
>especially in certain parts of ham radio, I think it can. After all,
>SKYWARN, ARES, and RACES manage to survive without the "aid" of being
>mandatory for license privileges.

Are YOU a regular CW user, Jason? What is your present speed for
"comfortable" CW operation? How many CW QSO's do you make,
compared to phone or other modes? If the "medical waiver" issue
had never been imposed upon the FCC by the inappropriate meddling
of a now deceased head of state with a ham callsign, and the ARRL
had steadfastly refused to support any reduction/elimination of the
former 5/13/20 WPM code testing regime, would YOU have learned
the code well enough to pass the 20 WPM test for your Extra-class
license?

The validity of the DX example can be viewed much the
same as many "old technology" pursuits in many unlicensed areas:
1. Manual gearbox autos are still sold and enjoyed by many
2. Archery is still a popular sport and mode of hunting.
3. Many people make their own furniture.
etc...

Hmmmm, here I am responding to your original denial, Larry. OK, I'll renig and say instead: It looks like you were the *first* (and only) RRAPer to reply to the original post, Larry. If you look at this in the threaded view, all other responses (including this one) are posts to *your* RE message...not posts to the original.

You got the award on being the first (and only) RRAPer to reply to the original post. I should have worded it thusly.

And, I'd bet dollars to donuts that I wasn't the only other person who skipped over the original message. Seems most of us did. At least I hope most people skip over messages like that. They're so very likely to contain viruses.

Wrong. I may use some circuit -either as found or modified to my own specifications- as a subcomponent of a system, integrating several such various subsystems, partially or essentially based on standard published designs, making modifications as I see fit, and the final result is a piece of equipment designed by ME.

If you think otherwise, that just shows your ignorance of reality.

And that point was what? That I didn't design a piece of ham gear I built because I didn't do the basic research on each and every subcircuit, but instead used the ARRL handbook (and others) as a research tool?
That I may have consulted standard reference texts for basic circuits, making modifications to them as needed and integrating a number of them into a unique piece of gear that *I* designed?

You sure are helping prove my point- that Cecil and Carl are allied in their effort to pick every possible nit in their quest to "prove" to the rest of ham radio something that they just can't quite get over.
And that you are obviously committed to help

Obviously you still haven't had that headsoak.

How far are you willing to go with that? Do I have to develop new ways of making AC into DC, so I can avoid 'copying' the bridge rectifier? Do I have to find some other way of getting the audio amp matched to the speaker's impedance, so I don't copy the impedance matching transformer already published in hundreds of places? What about Darlingtons? That's published...guess I need to find a whole new set of ways to use transistors...nope, the inner workings of transistors are published, too. So I have to some up with all new components.

And, of course, I'll need to find an unpublished antenna design to hook it up to.

>many of the membership have handy internet access or use
>internet access to keep up with the BOD?

Actually, Clay, it was the ARRL Board of Directors, not the "Newington crowd" that decided to remove a number of ill-read things from QST. The detailed and boring Board and committee minutes were among them. None of the Board members live in Newington, and the meeting was held near Dallas.

I think the last time ARRL surveyed its membership on web access, the number was in the upper 70%. Those that want to receive paper copies of the Board minutes only need ask.

I personally think the decision was the correct one.

>QST is in the unfortunate position of having to trim costs out of
>somewhere. DXers had their portion cut a couple years ago, and currently
>the ARRL is eyeing cutting out Section News and some contesting content
>(linescores and rules in particular), moving those over to the web. There's
>been loud wailing and gnashing of teeth out of both camps.

As to Section news, I believe that publishing that information on the web page is a much better alternative than publishing it in QST. Back when QST was the only alternative, it made sense, but the web is a much better publishing mechanism for news type information. On the web, it will not be limited in size to nearly the extent it is in QST; it will not use mouse print; it can contain photos, sound clips and hyper links and its text content will let it appear on search results using the internal and external search engines.

>But taking the minutes out - you'd think that'd be fairly non-controversial
>and also one of the easiest ways to start cutting costs (I'd also suggest
>going back to B&W and smaller type, but I digress). And, truly, it is.

When it comes to ARRL, Clay seeks every controversy he can find. I bet if the Board had voted to keep the minutes in QST, we would have seen a post from him that said that the Board had done something wrong there, too. And there would have been some great conspiracy theory tossed in there for good measure. :-)

>Good luck with the Savi work. I see this as the greater
>threat to 70 cm surpassing the Little LEO attempted grab.
>The ARRL had better dip into that $400,000 war chest or
>there could be big trouble.

Actually, this is but one of several things that ARRL's "Defense fund" gets spent on. The number of such threats to our use of spectrum has increased signficantly over the years, and what once was funded solely by membership dues could not continue to be funded only from that source. Fortunately, many hams have stepped up to the plate and added support to this part of ARRL's work, member or not.

>As you know interference is a two way street. If they get
>70 cm for RFID, which is very likely, and my VHF DXer friend
>down the street turns his 70 cm 10,000 W ERP beams toward
>the airport, and several bags are left laying on the tarmac
>as the plane taxis out, guess what?

In their filings with the Commission on this one, hams have offered a number of reasons that 70 cm is not a good choice.
That homeland-security tie-in is a good one. I am glad you made it. I will point it out to the DC guys and suggest that they support the Comments you filed.

But never mind your friend with his 10,000 W EIRP. What about the 70 cm radar operating at some airports? Those might leave a few bags on the tarmac, too. :-)

> before they ever see a card...LOL
>
> Kim W5TIT

Hi Kim, it was probably from the the W5 group (Magnolia DX Club). They
oversee the incoming QSL buro.

As to the date, not surprising. I've received cards after 3+ years. It's slow but cheaper than qsling direct. They don't call it the QSL BURRO for nothing.

Not sure how one lies on a log though. You're either in there or your not. If you work a station, you log it in.
If they send a card, you check your log. If they're not, you send in back (hopefully it came in a SASE) with NIL written on it...NOT IN LOG.

Same thing if you work a station. Can't fudge that type of thing unless there's some collusion afoot wink wink nudge nudge sayyy nooo more

And yes, finally, I have gotten a few burro cards back, after a couple of years marked SK. It happens.

Some of the cards I've gotten in the past are beautiful..scenes of the area. Some are cartoons. Some, primarily from African countries for some reason, have pictures of naked wenches on the front (gasppp..don't tell Larry for heaven sakes)

First time I ever got one, I opened the envelope and was reading the back. My wife came in and sat down,
saw the front of the card and started laughing wanting to know just what I was getting into (It was one of my first qsl cards).
I told her about getting these cards and see started turning red from laughter and telling me about not letting the kids see them. When I flipped the card and saw the naked
African wench carrying a water ...yummm... jug on her head
I turned RED!!!!!!!!

Oh well, sorry for the tangent.

73,

Ronnie

In article <3C6C000E.EF2C4E86@IEEE.org>, CAM <Cecil.A.Moore@IEEE.org> writes:

>But when you say you designed a rig,
>without giving rightful credit to the actual designer(s), that is plagiarism.
>Virtually anyone can copy circuits from "a comprehensive source" and that is
>not "design".

All right, how about this:

A dozen or so years ago, I found a guy selling crystal filters at a hamfest. Fifty
cents each, 1400 kHz center frequency. No data sheets. I bought four, because
sometimes such items are junk. I shoulda bought the whole milk-crate full.

Brought the things home, made some phone calls, discovered they were really
nice 8 pole jobs. Haywired together a bunch of circuits to make a crude 80
meter receiver. WOW - these things are GOOD! So now the serious work begins.

First problem is to come up with a heterodyning scheme. Lots of calculations
gives a set of VFO and xtal oscillator freqs that cover 80/40/20 without too many
spurs or birdies AND permits transceive operation. The transmit
heterodyne scheme is different from the receive scheme on 40 and 20, btw.

Then I begin drawing circuits - RF amplifier, mixer, xtal filter impedance
matching, 2 stages of IF, product detector, BFO, audio stages, sidetone
oscillator, VFO, VFO buffers, premixer, heterodyne oscillator, to name a few.
Also mechanical/chassis/panel layout, wiring harness, etc. VFO is a
subassembly in a homemade box of thick aluminum plates.

Had to figure out all of the tuned circuits and the various control schemes. Also
signal levels, impedance matching and dial calibration. Most of the individual
stage circuits (like the product detector) are adaptations of tried-and-true ones,
but they required adaptation to work on the desired frequency ranges and using
available parts.

No fancy test gear or tools. I was lucky to have an old drill press and lots of
parts. Also a VTVM, VOM, GDO, Q meter, freq meter and an old signal generator.

End result worked really well and became my station receiver for over a decade.
Shortly after it was completed, a matching transmitter system was added so that
the end result is a transceiver. New power supplies and cabling were assembled
from available parts.

Concepts and parts from many different sources were combined to produce a one-of-a-kind rig. It's the latest in a series of homebrew rigs that goes back to 1967. The last manufactured rig I had was a Ten Tec Argosy that I sold in 1984.

Now I ask you - did I design anything in the production of this rig? I think I did.
Is this a "homebrew" rig? I think so. Has anybody else in this NG done "homebrew" and "design" of an amateur station as an amateur (meaning at home on their own time) like this?

I don;t know about the Tech. Too soon to tell about the restructuring.

>If the
>test were so crucial to preserving CW, then why is high-speed CW still
>popular among DX chasers, contesters, and QRPers?

As AC6XG notes, those folks already know it.

More important, there is a large group of hams who know and use Morse today,
and will keep doing so regardless of any test. Whether new hams will be
attracted to
Morse use on the air is a different question.

>I think that if the Morse Code testing requirement is eliminated,
>interest in CW would actually increase. More people would operate on
>the HF frequencies, and a significant percentage of the newcomers
>would discover CW at some point in their ham careers. Those who

>turn to CW.

Maybe - I know I sure hope so.

However, if the 'phone subbands on HF are widened, there will be less and less
room for the Morse folks to operate in accordance with good amateur practice.
(Although Morse is legal in the 'phone subbands, the routine use of Morse in
those subbands is not got operating practice).
>
>In my opinion, CW should stand on its own merits and not require a
>testing requirement to "support" it.

Would you say the same thing about the technical parts of the written test?

>Given the popularity of CW,
>especially in certain parts of ham radio, I think it can.

I agree - but only if it is popularized actively.

>After all,
>SKYWARN, ARES, and RACES manage to survive without the "aid" of being
>mandatory for license privileges.

Might depend a lot on whether the old timers who want to promote the mode tell people about its virtues or tell people how lazy and no good they are because they waited until the requirements were reduced or eliminated before becoming hams.

I bet some of the old timers will deny vehemently some of the things they said here. :-)

Here are some numbers to think about. These are the number of unexpired
FCC ARS licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of February 14, 2002:

Novice - 39,722 (decrease of 9,607)
Tech - 235,907 (increase of 30,563)
Tech Plus - 83,494 (decrease of 45,366)
General - 138,748 (increase of 26,071)
Advanced - 86,265 (decrease of 13,487)
Extra - 98,608 (increase of 19,858)
Total - 682,744 (increase of 7,952)

Bob meet Leonard H Anderson Len meet Bob. The two of you should be shut in a dark room and beat each other. I thought Len topped the cake when he trivialized the 911 events, but Bob you take a close 2nd. Back in the 80's several amateurs did die will going on a DXpedition. If memory serves, they were shot during a dispute between Taiwan and China over some piece of coral reef. They were in the wrong place at the wrong time But of course, you'd have known that if you bothered to look into the situation before proving to the NG's that you and the West Coast wacko are cut from the same piece of stank cloth. :(

No cheers or regards for you either

12 pages per year.??? - one page per issue? To what
extent will the Newington crowd go to keep the QST money
pump fine tuned and ignore the membership? Nevermind, I
think we got the answer to that question on the CW testing
issue. I agree with the poster that the ARRL needs to find
a cheap printer, go back to two color if necessary, but stop
throwing content overboard. Otherwise this looks like some
kind of Machevalian management maneuver, to further
disconnect the workings of the BOD and control of the
Newington Crowd from the rank and file.

> components.

The difference between copying a design and designing it yourself
is pretty self evident. A couple of days ago, I designed a circuit
to turn on my IC-706's tune circuit when I pushed the tune button
on my HS-1600 screwdriver antenna. I recognized that I needed to
'OR' the voltages from the two antenna tuning wires and drive the
base of an NPN transistor with the resulting signal. That meant
a series resistor to limit the base current. 2N2222 transistors
are NPN. This was a very simple design but I didn't copy anyone
else's design in the process. In the process of this design, I
came up with a couple of other useful similar designs.

When I publish this design, anyone who copies it will not have
done the design work. They will have done the production work.

>
> I think the last time ARRL surveyed its membership on web access, the number
> was in the upper 70%.

Of course, over the years we have learned not to trust any
such "survey". Probably the question was: "Do you have a
computer and a telephone?". If the answer is yes and yes
then the member obviously has web access (never mind he has
no modem or is subscribed to an ISP).

> Those that want to receive paper copies of the Board

> (Although Morse is legal in the 'phone subbands, the routine use of
Morse in
> those subbands is not got operating practice).

At this point no one is proposing any phone expansion that encroaches on any portion of the band where Morse Code is routinely used. Exceptions are code contests, but even then the activity does not extend to where the new phone subband limits are proposed. The new phone extensions may be unwise depending on how popular the digital modes become. "Wideband" digital modes such as packet radio are giving way to more spectrally efficient modes such as PSK31.

> Would you say the same thing about the technical parts of the written
test?

It is arguable that the technical portion of the exams hasn't already met the same fate. However, the exams must be geared toward the needs of the day. At one time it was critical to understand the proper workings of a PI output circuit. While it is still important knowledge for the serious home brew artist, it is less important as most hams tend to use premanufactured equipment with wideband output circiutry.

> I agree - but only if it is popularized actively.

The General and Extra exams should include a few questions about Morse timing and good operating practices after the Morse requirement is dropped. I think the popularity of QRP along with home brewing and the new activities of backpack and survival radio will encourage a knowledge of Morse. Add to that the current popularity contesting enjoys and Morse has a bright future on the ham bands for the next decade or more even if S25 is struck next year.

Oh, really? Then why are emergency simulation drills held so frequently? Why is traffic handling repeatedly practiced. Please don't

imply these activities require no new skills. To do so takes away from the time and effort hams perform in public service.

Ed, I hereby publicly apologize to you for all of that. For some reason I still don't grasp it seemed necessary to jolt you to get your attention off Cecil and Carl's jihad. Why did they decide to single me out as their target on which to heap layer after layer of insults all related to my alleged rejection of technology? Clearly it's because I still believe that hams won't learn Morse code unless it is required for licensing, at least in numbers sufficient to retain it as a viable mode within ham radio. The reasons why it needs to be retained are well established and need not be repeated yet again. As a simple curiousity it just won't make it. It's too "hard".

Considering that all the important details of upcoming issues and the alliances
needed to gain a majority of votes on those issues are worked out in private
conversations in advance of BOD meetings, I certainly agree.

160 meters was what I mainly had in mind. For US ARS I
believe there are still restrictions on VHF and UHF
frequencies use along parts of the Canadian Border for
security purposes. Of course in the 40's, VHF and UHF were
not as cherished by the ARS as they are today.

N2EY wrote:

> Now I ask you - did I design anything in the production of this rig? I think I
> did.

In the engineering world, "design" is pretty much synonymous with "original design". When one writes some computer code, one is designing. If one borrows a sub-routine from someone else and makes a few modifications, that is usually not called design work. It is usually called integration work. The same applies to hardware. Probably most of what you did was integration. So do you think there was anything original in your "design"? Did your "design" perform a task better or different from known designs?

Contrast that to my IC-706/HS-1600 tuning system. It is very simple but I don't know of anybody else who has ever done it that way. I have searched the net and found no similar designs. So, until I find out otherwise, I can say I designed the circuit. I took the components and arranged them to perform an original (as far as I know) function. As far as I know, my Ladder-Line Length Selector is an original design.

Joe ...

Please re-read the thread ... I have NO issue with
hams building gear for their own use by copying
existing designs.

The issue was that Dick is always the one to claim
that virtually everything (except Morse skill) from modern
technology, to modern design practice, to the most
basic principles of communications theory is "irrelevant"
to amateur radio. THEN he starts spouting about all
of the gear that he's "designed" ... when in fact it appears
that he has done essentially NO original design, merely
copied the designs of others.
```

Again, there's nothing wrong with copying a good design
(as long as it's not violating someone's intellectual property
rights ... as in patents ...), however to copy someone else's
design and claim it as one's own "design" is tantamount
to copying some else's poem and claiming to have written
it.

Those of us who have been after Dick are just trying
(though it seems an almost impossible task) to "keep
him honest" in his claims and to debunk his absurd
assertions that "all that other stuff is irrelevant to ham
radio."

The 12 pages are the BOD meeting minutes. I'm an avid reader of QST,
but I've rarely been so bored as to actually sit and read through the
minutes. Ocassionally I have read a particular minute that was
referenced in the meeting overview text, but not much more. I don't see
the harm in dropping the minutes and using that space for more general
interest articles.

Putting the minute on the Web has the potential to be able to
catergorize the minutes and link to them in such a way so interesting
portions can be found and read without wading through the uninteresting
stuff. Same thing for the Section News.

As it is my section (Kansas) currently receives very little column
space. But there is much more going on than my SM can report in QST.
As a result he has a monthly email newsletter to keep everyone informed.
Folding this into the ARRL.org site means uniformity with the other
sections and the ability of other sections to get a better idea of
what's happening in their neighboring sections.

How long do you think QST would last as a leading amateur radio
publication if it went back to two color?

Actually, I believe the content being proposed to be moved out currently
causes better content to be left out of QST.

> Otherwise this looks like some
> kind of Machevalian management maneuver, to further
> disconnect the workings of the BOD and control of the
> Newington Crowd from the rank and file.

Exactly how? It's arguable that making such content Web accessable potentially exposes it to a much larger audience than QST can currently reach.

I think this is the BoD's attempt to direct QST's content more toward the interests of the newer hams and offer a more diverse coverage of the operational aspects of amateur radio.

Don't like what "they" are doing, run for director. Shrug.

Because of what you have said in your postings, Dick. CW doesn't
get through when all other modes fail. Shannon's theorem does
matter. Extras should not rest on their laurels. Your "designs"
are probably not primarily original. And you have not been singled
out. Everyone else who utters technical falsehoods is chastised.

If you would try to be a nicer person, not nearly as many of
your nits would be picked.

If you're referring to me, let me make it clear- I sure won deny that I've said that Carl Stevenson and his type are discredited for their attitudes and lack of initiative in that they laid around and whimpered for all those years when most of us just did what was required to get the license and got on without lives.

Do I really believe that many new hams will actually achieve proficiency in CW operations now that no one is required to do it?
Why in the world would they? Sure, a few will find enough reason to, just as a few always found enough interest in doing so before there was any added official privilege in it. For example when Incentive Licensing came out in 1968 there were fewer than 5,000 Extra class licensees. Soon the number began to climb due to the incentives involved; learn and pass the tests and as your reward you got extra frequency previliges. Today no such incentive exists. Also the higher speed code tests, as they have existed for most of the period of some 18 years since the beginning of VE testing, are considerably easier to pass than when it required a solid minute of five at the FCC office. This has greatly enhanced the number of higher grade licensees.
Today all privileges are awarded for what is only the most elementary level of code training, and to become proficient in the mode requires the same commitment of time and interest that was found to be far "too much" for so many necomers.
Where does anyone find any indication suggesting a change in that attitude?
Just because it is no longer demanded as a test requirement, does anyone really believe that now it will be so attractive that newcomers will flock to it? I think that is a daydream.

Interesting philosophy there, Troll. By that standard the ARS
itself is a goner, for it isn't "standing on its own merits" rather
had to have its licensing qualifications downgraded to remain
attractive to newcomers. And it is certainly not clear that the
move has helped maintain serious interest in the face of the internet..

And you insist that no one except an engineer is capable of
doing any such thing.
If I take your circuit and find that I can
improve on it by a change that adapts it for my particular use, that
counts for nothing. We see.

My interpretation of the article is that the minutes are
currently accessible in both arrl.org and QST. Is that not
true? The article, IMHO, points to reducing exposure of the
BoD minutes, by removing it from QST, not increasing it.

>
> I think this is the BoD's attempt to direct QST's content more toward

The blurb also stated that the editors have been authorized
to reduce the number of pages in QST per month. I don't
think this supports the above assertion.

> get through when all other modes fail.

CW *does* gete through when all the other COMMONLY USED modes fail. But you already knew that. Not many ham out there in radio land around the globe use your advanced DSP modes, or even lesser digital modes. And EVERY HF ham rig made still incorporates radiotelegraphy, which can be utilized at any time by any *qualified* ham radio operator.

> Shannon's theorem does
> matter.

Not at all to the case that was present, which was that PSK31 could not be printed when its own CWID was clearly copyable. You told me that a fair comparison couldn't be made unless I constricted the CWID to the same 31hz bandpass. When I said that "Shannon doesn't matter" that is exactly what I meant. Shannon doesn't matter in such an operational situation. Where one has to get the message through and a lesser efficiency mode works where one of higher efficienty does not, all the theory you can present doesn't matter.

> Extras should not rest on their laurels.

Troll, troll, troll yer boat, you lid. I see that you, too, can now rest on YOUR laurels since after 50 years trying you finally got the Extra Lite. Just like me, you will never again have to concern yourself with another amateur radio test. It you're implying that I dropped all interest in anything technical when I passed the Extra class exam in 1969 you're an even larger fool that you have so far presented.

> Your "designs"
> are probably not primarily original.

O I think they were. My "designs" were totally original, if the subelements known as circuits may have not been. About 30 years ago I designed and built a very compact high powered linear amplifier using a pair of 813 tubes mounted horizontally, including
an on-board solid state power supply that was little more than a
cubic foot on the desktop. Something on the order of a SB200
by Heath, but certainly different in most all detail. Was that piece of gear

"my original design"? Sure was, I even built the cabinet. I have a friend who is a ham who owns a sheet metal shop he lets me use.

> And you have not been singled
> out. Everyone else who utters technical falsehoods is chastised.
>

And you have long proven yourself the master of picky, picky, picky to the Nth degree. So you closely scrutinize each and every word for anything you can find to rearrange or reconfigure into a context that you can criticize. Like you "took both sides of the debate in high school and "won". We know, we've seen you at work here.

>
> If you would try to be a nicer person, not nearly as many of
> your nits would be picked.

So I should just allow you and the rest of the anticoders to bulldoze your way all over anything I say with impunity. That would make me "nicer". Right.

Hi Dick,
Your assessment of the meetings may be true. But, how could you have made that assessment if the minutes were not available to you? My point is that they are going to be made less available by eliminating them from membership's journal. One can go back two years and read K1ZZ's view of the future for the ARRL, in a report he made to the BoD. One would not be able to do that if he did not have it in hard copy, and know that it is duplicated in hardcopy throughout the land. Again, pointing to ENRON's new examples of doing business, electronic files of minutes are easy to control, modify, and delete.

By the way, I am looking for pointers to w1rfi's blue ribbon committee on modes of the future - interim, or final - report to the BoD. Do you know where it is?

Because Morse/CW has merits?
Because Morse/CW can solve some communications problems?
Because Morse/CW is fun for some people?
Because Morse/CW is logical to use with QRP kits?
Because hams like you and me promote the mode?

If the AS doesn't have enough merit to survive, it doesn't deserve
to survive. I believe the FCC keeps the AS around primarily for the
purpose of emergency communications.

I had to do a search on the ARRL site to find the latest BoD minutes, but find them I did at http://www.arrl.org/announce/board-0201/ they are also in March 2002 QST beginning on page 63. So yes it's true (why this matters, I'm unsure).

What article? I assume you mean the "It Seems to Us..." editorial by Dave Sumner K1ZZ? That is opinion as held by the Executive Vice President who oversees the day-to-day operations.

Now, I did not get the impression the HQ staff nor the BoD are trying to reduce the exposure of the minutes from Mr. Sumner's editorial. Rather the Board recognizes they have a problem and are trying to repair it (not in the vein of Enron).

> The blurb also stated that the editors have been authorized
> to reduce the number of pages in QST per month. I don't
> think this supports the above assertion.

The retraction of pages basically takes QST back to a size it was two years ago and reducing the lowest read content leads to a better publication all the way around. Keep in mind the bump-up in page count was mandated in mid-2000; a time when the Dot Bomb bubble had yet to burst and the economy was still riding high. Now advertising dollars are fewer in all areas of Tech.

QST is not the only magazine forced to reduce page count. Other Tech publication have done the same thing in the past year. The only difference is that QST has a membership base with differing opinions on how best to weather the storm.

I noticed in this latest issue quite a bit of white space in the advertising section. I think its obvious the editorial staff should be able to adjust the page count as necessary to avoid wasting paper and money.

Modifying standard circuits comes under the heading of "integration",
Dick, not "design". Technically speaking, you probably integrated your
rig. If you changed an existing poem, would you say you wrote the poem?

>components.

You've turned this into a reducto ad absurdum exchange, perhaps
not understanding what "design" is about. Let me clarify some of
the steps needed when you cannot get the exact parts stated in
publications. Let's take the "bridge rectifier" you mentioned.

You have a DC load resistance, a filter capacity, and an AC input.
Some details need to be fleshed out. The peak inverse voltage
(PIV) rating of the full-wave bridge rectifier diodes must be known so
that they can withstand the expected peak AC voltage under all
conditions (high line voltage, surges and spikes expected or
observed). You should get diodes which can take the surge current
on turn-on that comes from initial charging of the filter capacitance;
unless you have an elaborate zero-crossing "detector-trigger" ahead
of the diodes the AC input may be at any part of its cycle. That
surge current may be limited by the AC transformer winding and/or
an added series resistance. All of those factors will determine
what kind of AC ripple will exist on the DC output...and the allowed
ripple may have to be filtered further...which then leads to a re-
examination of everything to account for turn-on charging of a
second capacitor depending on whether the added filtering is R-C
or L-C. The design can be completed by worst-casing peaks and
surges against manufacturer's value tolerances.

None of that NEEDS to be done if you are just copying a circuit
out of a publication. You can just copy it, forget about checking
anything...or the possibility that a misprint/typo or outright mistake

happened that could make the circuit useless. If it works the first time and continues to work (supposedly under all conditons claimed), you can crow about "designing your own" and start looking around for praise and respect from peers on how good a "designer" you are. [that does happen with others] The alternate is the common-sense approach as it is done in the industry and by knowledgeable hobbyists: Check everything according to published design guides and formulas [General Electric put out a neat little freebie book on power supplies in the late 1960s which is ideal for that sort of thing], check the manufacturer's data on PIV, steady-state current, surge current of the diodes. Then you get the ESR of the filter capacitors (easy to measure with simple equipment if you don't have published data) to make sure the electrolytics don't overheat (if you use electrolytics). If you use a C-L-C filter you must make sure you don't have a "resonance" condition at the ripple frequency which makes the filtering ineffective.

A full-wave "bridge" recitifier is very basic and nobody in the industry "re-invents" it as part of the design process. Designers there use the basic circuit and then spend the majority of design time getting all the details, specifications, criteria met such that it is reproducible in any quantity (one to thousands) given certain part tolerances.

No real designer "reinvents" an impedance matching transformer. It is basic. What the designer does is to ascertain the driving device steady-state currents and voltages and the peak signal currents and voltages, the load impedance nominal value and value over whatever frequency range is required. If that transformer must match a speaker, it cannot be assumed that "all" speakers are "4 Ohms" (as it was prior to 1970 or so) or even that older speakers are 4 Ohms impedance over even part of their frequency response (few are).

It gets interesting when anyone copies "representative" stages having dissimilar supply voltages and then tries to approximate rebiasing active devices for the same supply voltage without doing any checking or calculation of that bias. In rare, very rare cases, such cobbling together may work (sort of) but tossing things together based on "feel" is not design.

>And, of course, I'll need to find an unpublished antenna design to
>hook it up to.

That IS an area which is wide-open for real, actual, NEW design. There are at least three major NEC computer programs to help the experimenter (EZNEC is good, Roy Lewallen's nice package). L. B. Cebik, W4RNL, has a whopping large collection of aids, tutorials, examples, etc., on his personal website and is a regular columnist at the Antennex site (an organization of antenna-oriented experimenters, mostly radio amateurs).

That's a lie, Dick, and lies like that are the reason you get
no respect on this newsgroup. I said "Odds are" that a circuit
was first designed by an engineer. If 51% of circuits are
designed by engineers, my statement is true. So Dick, do you
think amateurs design more circuits than engineers? That's
what you are arguing.

It was in fact Booz-Allen-Hamilton. I spent a week at a seminar conducted by them about "Bureau reorganization" and emerged, as did my peers, feeling that this was a great waste of government money and time, and that The Bozos hadn't clue one about what we were 'sposed to be doing for a living - compliance evaluation and enforcement.

They spent one whole day on "what shall we rename the Bureau" (at the insistance of a specific Commissioner who felt that the Bureau's initials were an ethnic slur, which they weren't) and came up with a most god-awful name that was liked by no one with any experience in the agency.

THAT was more important to "the powers that be" than coming up with practical solutions for real problems, like getting more enforcement agents on board, trained, and in the field (we wound up with far less....).

>One point of disagreement, the fall of the FCC was a
>bipartisan effort. Hundt was an operative trying to satisfy
>Gore, Tauzan, Gingrich, et.al.

Like trying to ride two horses while sitting on one saddle.....

I was always disappointed that Hundt didn't have the Brass Ones to stand up to The Congress and pound the table for proper funding - for the agency, which was miniscule in the Federal scheme of things. So much for "support your troops".

>After the 911 affair I would
>bet that the "new" field group stays busy scurring around
>trying to get federal warrants to tap our internet and cell
>phone traffic.

Thanks to JEdgar Hoover and the late Congressman John Moss, the FCC is kept out of that loop. The Director would spin in his grave if anyone except his folks did any of that sort of work.

Nope, I'm not resting on my laurels, Dick. I am working on a new web page
describing my IC-706/HS-1600 tuning technique.

Dick, the few times I have tried to be nice to you, you have come back and
spit in my face. You get exactly the responses that you deserve. You can
dish out obscenity after obscenity but you just can't take a little criticism.

Clay, it probably helps to have been around a while. At one point before dementia set in, Wayne Green outsold everyone else combined and that was CQ, QST, HR in the 70s. He would regularly opine about how QST was a collection of traffic reports, minutes of meetings, and the monthly page-turner Silent Keys along with Doug DeMaw whose writing style drove me to distraction not to mention not being particularly into the doings of W1BB on 160. He was right! My shack had a lot of stuff built from 73 articles, some from HR, and not a damned thing out of Q-Street.

Like it or not the League is in the publishing biz and by and large does it well so this change reflects both the need to be more of an all things to all people magazine in the face of some changing and brutal economics in the biz; a non-profit 2nd class permit don't buy what it once did. So don't be quite so harsh about eliminating what is an easily-accessable and frankly perishable bit of news from the paper-and-ink medium. Q-Street is rarely pitched by its subscribers but few of them look up board minutes and Silent Keys from a month ago let alone a year or several years. And the reality is that news of that kind is a lot fresher off of bulletins and the Internet than the usual delay in getting it in a member mag.

I don't know the circumstances but hiding things is almost certainly not the motivation.

BTW, I have not been a member of ARRL for a number of years.

>At this point no one is proposing any phone expansion that encroaches on
>any portion of the band where Morse Code is routinely used.

To my knowledge, no one has made that proposal before the FCC, although the ARRL "Novice refarming" proposal does seek to allocate part of the current Novice/Tech+ bands to radiotelephone/image use. It is arguable whether Morse code is "routinely used" in those parts of the band. Those bands certainly are much less heavily occupied when I was a Novice, receiver selectivity issues notwithstanding.

I have seen some propose here that sub-band mode allocations be dispensed with altogether. In many areas of the world, that is already the case.

>Well Ed, if young people today are anything like I was, it won't matter
>very much what old timers have to say.

That may apply to the 13 year old, but as I recall, we cared about what our elders said a LOT more than we let on. A word of praise got the shrug of the shoulders, but inside, it made a big difference.

Besides, from what I see, people are entering ham radio in their twenties, thirties and older. I think it is because as a 13-year old, I was willing to study 4 pages of study guide instead of 200+ pages required today, but what do I know. :-)

In all of my life, I can't remember a single time that being called lazy and no-good made me motivated to do anything -- when I was 13 or now.

While I don't see "stuck in the past" as being in the same league as "asshole,"
there are many on that side of the fence I don't look to for leadership,
either, even if I agree with some of their points.

I bet if this could be decided by you and Bill Sohl, some sort of agreement
would be reached if we sat you two in a room together and didn't let you out
until an agreement was reached. The coffee would not be decaf. :-)

>If you would simply give the references for the circuits you copied,
>you wouldn't be on such thin ice.

Now, Cecil, can you say that you have always given references to Hartley if you used one of his oscillator designs in your designs, or if you drew heavily from an IC manufacturer's app note?

Dick has clarified what he meant by design -- that he took a number of blocks and put them together in a way that he thought up. I accept his clarification and agree that doing so is a form of design.

I would disagree with him if he were to say that designing from scratch, using modern design tools such as CAE software is not a better way, but he clarified that he had fun and that was his primary goal.

What is wrong with live and let live? He really didn't do anything wrong, except for perhaps not initially explain what he meant by "design." Do any of the dictionary definitions of "design" not fit what he described?

You are correct; the action was deferred. See minute 41 from the minutes of the January 2002 Board meeting.

My apologies for creating a bit of confusion.

>> Those that want to receive paper copies of the Board
>> minutes only need ask.

>Then send them to me no later than 1 month after BOD
>meetings and first class please.

To my knowledge, the ARRL doesn't take "standing orders" for Board minutes. But they will send them on request, and, yes, it would be via one form or another of First Class mail.

Seeing as I know that you have web access, though, I will consider that your request was rhetorical.

Would you like to to post the URL, or can you find them okay on the ARRL Web site?

>> I personally think the decision was the correct one.

>Why are we not surprised? Let's see, oh, this is the other
>Ed Hare. Sorry.

I don't understand the snip. But you are right -- you should not be surprised, because not printing something in QST that very few people read, that has been well publicized through articles on the web and in QST and has been read by most of those who want to read it, much sooner than it could be published in QST, is, IMHO, a correct decision.

You are free to disagree.

But the minutes are available to him, Clay -- sooner than they would be if they were published in QST.

And I agree with his assessment of the meetings.

> By the way, I am looking for pointers to w1rfi's blue
>ribbon committee on modes of the future - interim, or final
>- report to the BoD. Do you know where it is?

W1RFI does not chair any committees, Clay. But reading between the dripping sarcasm, I think that you are referring to the Technology Task Force. There is a report from that Committee on the ARRL web page -- I found it by typing "report" in the search box on the ARRL page.

The TTF is now under new leadership -- Howie Huntington is now the chairman. I have been a bit disappointed in the relative lack of activity of the TTF over the past months and I am looking forward to working with Howie to see what can be done.

Another related committee is the Spectrum Strategy Committee. It has wound down its work and issued a final report at the January meeting. I think that the Jan 2001 report of Stratcom was about as in depth as I can imagine a report to be, btw -- that is probably a better report to read to get the gist of Stratcom's work.

Since the report, the High Speed Digital & Multimedia Working Group and the Software Define Radio Working Group have been formed and they are just now getting ramped up.

This stems from a previous mandate from the Board that the size of QST was to be fixed at a certain number of pages. That didn't work out, so the Board went back to what it has always been -- the number of pages are determined by the amount of advertising sold.

>to for leadership into the future?

Apparently so considering that all those words in quotation marks were written by ALREADY LICENSED RADIO AMATEURS. Go do the famous N2EY Google search to see who they are.

N2EY is a "ham historian" claimant who has consistently made known his love for the PAST in terms of equipment, technology, tradition, operating skills. N2EY has also consistently ignored the rest of the radio world in regards to technological advances made outside of amateur radio. This is apparent in the sum total of N2EY's messaging over the past years.

N2EY is an advocate of morse methods in amateur radio...and was an outright PCTA who could not effectively "sell" the "need" for morse skills for a US amateur radio license. N2EY has now become somewhat

ambivalent in morse testing, claiming that "morse testing is a 'closed issue' and a 'done deal'" and that "no further discussion on that is needed." N2EY has claimed foreknowledge of the FCC intentions and motivations as if he had "inside information" not accessible by the public...said "knowing of intentions" being rather fanciful claims which are rather colored by his particular personal desires.

The facts from the FCC in regards to the code testing issue(s) are accessible to the US public and anyone who has Internet access capability. As to "the code issue being a 'done deal,'" the FCC International Bureau Informal Working Group Six (IWG-6) has effectively tabled or DONE NOTHING about S25.5 insofar as establishing any direct statement one way or another. The IWG-6 has also tabled the "40 m issue" after a year's time in at least six meetings; the 40 m issue of SW BC v. amateurs has been going on since WARC-1979.

Reading EVERYTHING about the IWG-6 can reveal some additional data that the code test issue is NOT a "done deal." The minutes of the September 2001 meeting of IWG-6 were not released until FOUR MONTHS LATER. Some may rationalize that as due to the 9-11 Attack on America but OTHER IWGs got their old meeting minutes released before the extraordinary delay of FOUR MONTHS to write up two pages of copy. The fine detail also reveals that the "scribe" for IWG-6 is Walt Ireland, a representative of the ARRL, the person responsible for getting those minutes written up.

All that is publicly accessible. No "mind reading" is needed or whatever metaphysical powers are claimed to "know what the FCC intends." The FCC's IWG-6 has not yet formed a position on amateur radio license code testing after over a year's time on action items that were formed over two years ago. The NTIA has already established their position on code testing, also publicly accessible. The US administration to WRC is made up of Department of State, FCC, and NTIA. As a group those can vote for the USA. Neither the ARRL nor IARU has any vote at any WRC despite the IARU finally reaching some sort of position on code testing (ambivalent, can only be interpreted as rather moderately not for it).

What kind of "looking to the future" is that? Nothing. IWG-6 seems to be stonewalling even though they have the least-technical action items of any IWG. One doesn't need to be a gifted seer to read the IWG-6 minutes and members affiliations and come to a conclusion there. It's all public.

Ah, but, N2EY will now segue to the "charges of name-calling," go into the "go search Google" routine, and attempt to bend pointing fingers back to the pointer. He will insist that He did no wrong, supports the future despite a romantic attachment to the past where the transistor and IC were not yet a part of amateur radio. He will also insist on code testing "because so many hams use code, love it, etc., etc." and still insist that the "code test is a done deal."

By the desperate ploy of trying to bend pointing fingers AND totally ignoring what has been written in here by rather obvious PCTAs (the most infamous being KH2D followed by the ever-popular Eric June), he tries to exhonerate the PCTAs as ALWAYS being the "good guys." They can do NO WRONG

for they love and cherish morsemanship, and seem to think they are "fully qualified" to behave in whatever way they choose.

The PCTAs think that the PAST is the "future." They want the present to revere, respect, and acknowledge their "superiority" in radio for "retaining the
cherished traditions (most prominent being morse code ability)" as if that were a Divine Attribute. It isn't divine but the delusion exists.

The present isn't falling for that and hasn't "flocked" to an amateur radio that
seems stubbornly, vainly trying to hold onto the past. All the PCTA denial and spin and name-calling and attempts to bar some citizens from commenting to their government does no good in making the past the future.

Did you lie to your boss and tell him that you designed it all by yourself?

I never claimed that the oscillators I used were original designs. In fact,
I borrowed the designs from Dr. Williamson, a nocode tech with a PhD degree
in EE, and I gave him full credit for the design. At Intel, if I said I had
done an original design, they would promptly send me to the patent attorney.

>design".

I disagree. It may be that way at Intel, but that's not the entire engineering
world.

It's interesting that you avoid Webster on the definition of "design".

>When one writes some computer code, one is designing.

Only if the code is new and unique.

>If one
>borrows a sub-routine from someone else and makes a few modifications,
>that is usually not called design work. It is usually called integration
>work.

At Intel, maybe. Not everywhere.

> The same applies to hardware.

Nope. By that definiton, almost nobody designs computers today, because they
are almost all classic Von Neumann machines.

>Probably most of what you did was
>integration.

Nope. Most of what I did was design.

> So do you think there was anything original in your "design"?

Yep. Lots of things. The heterodyne schemes, the RIT method, the dial, and
lots more.

>Did your "design" perform a task better or different from known designs?

Yup. It also met all of the design criteria set for it.
>
>Contrast that to my IC-706/HS-1600 tuning system. It is very simple but
>I don't know of anybody else who has ever done it that way.

What does it involve?

>I have searched
>the net and found no similar designs.

So? Most designs are not on the net.

>So, until I find out otherwise, I
>can say I designed the circuit. I took the components and arranged them
>to perform an original (as far as I know) function. As far as I know,
>my Ladder-Line Length Selector is an original design.

The same is true of my Southgate Type 7 transceiver. - and its predecessors.

What I find interesting is that nobody else has stepped up and described actual
amateur radio RIGS (receivers, transmitters, transceivers) they have designed
or
homebrewed from scratch. Lots of talk about "new technologies" but I don't see
any RADIOS being designed. Sad, really.

A hazing ritual has nothing to do with the wonderful merit of CW, Little Dick. The hazing ritual has everything to do with your term--one of many--"code haters," Little Dick.

We are more communicators--and ham operators--than you've ever had the capacity to understand.

And how is one to learn to appreciate and apply those merits,
other than to learn it? And should we really expect NCI (with a
Carl Stevenson at the helm, and you helping out)
to do anything but urge newcomers
to not waste their time with such a "hazing ritual"?

>
> Because Morse/CW can solve some communications problems?

Ah, but you, Kandid Karl et al insist those problems will forever be
solved by the latest technology!

>
> Because Morse/CW is fun for some people?

Almist invariably those are people who learned Morse code for
licensing or use at work in the case of oldtimers. Should we expect
any serious number of newcomers who just can't find time to study
to learn it just because someone said "Hey, that sounds like fun"
when so many Cecils and Carls out there relegate it to the status
a novelty?

>
> Because Morse/CW is logical to use with QRP kits?

Don't you think those kits will be built by people who already
know the code? Do you REALLY think that CBers like Kim are
gonna say "Oh, geez I could really get off on learning that Morris
code and doing it on Qrp!!!" Yeah, verily!

You really should show some evidence in support of such a
statement as that, it sure won't stand on its own. You are an absolute
master at twisting meanings and altering contexts for the express
purpose of gouging, for some reason me in particular, and the only
reason existant is that I support code testing for hams. That's more
than enough for you.

Evidently you misunderstood what you read. It was specifically
stated that no one blames newcomers for the requrements they find
when they arrive. The criticism was directed at the Carl Stevensons
who spend their best 25 years moaning and protesting instead of
getting on with it. NCI is loaded with 'em.

The desire for people to learn and appreciate--and apply the merits--of CW is not up to NCI. The *only* charter that NCI has is to end CW testing for the acquisition of an amateur radio license. I have never seen anyone in NCI say that hams should not learn CW nor that hams should be forbidden from using CW.

It is not up to the ARRL or the FCC, either, to give credence to any mode over another--such as happens with the sanctioning of CW testing. The merit of CW to prove technical aptitude is questionable, at best, so has no place in the realm of testing for technical aptitude or applicability.

> >
> > Because Morse/CW can solve some communications problems?
>
> Ah, but you, Kandid Karl et al insist those problems will forever be
> solved by the latest technology!

I can't speak for Carl, but I have never seen Cecil do anything but remind folks that CW is not the *only* mode of merit in ham radio. Remember that, often, when someone even begins going down the path of taking CW testing out of the ham radio arena, they are suddenly akin to dumb, sleazy, fat, knuckle-dragging, etc. I do not believe CW has any place in the testing arena--though I don't care one way or the other (I already have my ticket).

I daresay, Little Dick, that you do less for the merit of CW, the fun of CW, or the practicality of CW, than Cecil, myself, Carl, or any other NCTA (as the acronym goes).

> >
> > Because Morse/CW is fun for some people?

That is *your* sneering adaptation to expressions of balance that have been expressed about CW in comparison to other modes, Little Dick. Of nearly all the "new hams" I've heard on VHF/UHF the past couple of years, most are eager and excited by CW. Most are as "rabid" as you are about its value to the service.

No he didn't, I gather, and neither did I. Nor did I say I did. I said
"Ham radio gear that I designed and built....".

I'd bet you have worked as an engineer where it was a given that
engineers did the same. By the standard you insist on applying to me you could never
use a standard IC and claim the complex finished device that included it was your
design. Nonsense.

LOL, LOL, LOL2!!!! I'm really ROFLMAO too, Kim :-) I'm really not, but
I just thought I'd post a reply you'd understand and appreciate!

Actually, I must say that this is one of the best messages you've ever
posted on the newsgroup, since it was actually amusing to see your
meager attempt to patronize me! However, you did do a good job of
explaining the basics of newsreader operation -- who helped you with
the technical details?

Len,

You are mistaken ...

IWG-6 produced a Draft US Proposal for the revision of S25,
which included the "suppression" of S25.5. (eliminating Morse
testing from the ITU Radio Regs) ... I know because I was there
personally on behalf of NCI and was part of the discussion.

> Reading EVERYTHING about the IWG-6 can reveal some additional data
that
> the code test issue is NOT a "done deal." The minutes of the
September
> 2001 meeting of IWG-6 were not released until FOUR MONTHS LATER.

> person responsible for getting those minutes written up.

While in all honesty, I have to admit that I wish Walt would
produce the minutes of IWG-6 meetings more promptly,
I also have to come to his defense to some degree as well,
as I know he has many other responsibilities and spends
a good deal of time in Geneva at ITU meetings as well.

> All that is publicly accessible. No "mind reading" is needed or

years ago.

That is not correct ... IWG-6 produced and approved a DRAFT US
Proposal on Agenda Item 1.7 and that Proposal was approved by
the WAC (the FCC's WRC Advisory Committee).

> The NTIA has already established their position on code testing,
also publicly
> accessible. The US administration to WRC is made up of Department
of
> State, FCC, and NTIA. As a group those can vote for the USA.
Neither the

of any
> IWG. One doesn't need to be a gifted seer to read the IWG-6 minutes
and
> members affiliations and come to a conclusion there. It's all
public.

What you see is not always all you get ... the ARRL was represented
in IWG-6, but so was NCI ... the mutually-agreed (and approved)
result was a draft proposal to change S25 to eliminate the Morse
requirement from the ITU Radio Regs.

I spoke with the lead person in the FCC's international bureau
just the other day and was told that it was NTIA that was holding
up the final release of a formal "agreed by all" (FCC/NTIA/State)
US Proposal ... but not over the Morse issue, but over some
apparent confusion or missunderstanding about some other
aspect of the revision of S25 ... and that it was expected that
the matter would be resolved shortly.

See what I mean? You are *forever* adding verbiage then attributing it to something that *I* said, that I did NOT say.

Nowhere in my posts will you find that I claimed that I did any
"original design", and I did not except for the design of the overall unit itself.
That's your extreme trolling coming to the fore yet one more time, of a great many over the past few years.
You, Sire are a Troll Extraordinaire. And Stevenson is your buttboy.

When you say, "CW gets through when all other modes fail", it certainly implies always, Dick. When all other modes are working and when all other modes have failed *is* always since there is no other possible condition. I suggest you change the statement to, "CW often gets through after most other modes have faded" so that you will avoid misleading newcomers.

> When communications are desperately needed, RESULTS is what matters.

And those results depend upon a lot of physics including Shannon's Theorem. If you don't believe it, try copying 20 wpm CW through the 31 Hz filter used by PSK31.

Nonsense! What it implies is what happens in real life on HF on the air.
When the voice modes have faded into unintelligible mush, and
RTTY, Packet and PSK31 are printing gibberish, CW can still be copied -that
is, if the operator has bothered to learn it! It'll be weak but
intelligible! One may have to use his skill as an operator
to adjust his receiver to provide adequate copy, but for some length of
time, as the band continues to fade out, CW will indeed
"Get through" after the other modes have dropped out - failed.
Surely your vast experience as an engineer and a longtime ham has
included this ordinary but definitive experience.

Let's look at it from a logic standpoint, Dick. There are two sets of possibilities. 1. When other modes get through 2. When other modes fail Is there any possibility outside of when other modes get through and when other modes fail? No, there is not. So the following two logical premises cover *ALL*, i.e. 100% of the possibilities.

1. CW gets through when other modes get through.
2. CW gets through when other modes fail.

Therefore, CW *always* gets through. This is the logical conclusion given the two above premises.

It's all simple logic, Dick. The conclusion is false so at least one of the premises must be false. Premise number 1 appears to be true so Premise number 2 has to be false.

I think that NCI and the code bashers in general have done a more
than adequate job of describing what they think, and for sure they have made an effort to
spread their opinon around. Sure, a special
gifted few newcomers will see through all the NCI buffoonery, but most will do as so many
have already - swallow it hook, line and sinker. No one "has the time..." NCI has decided
to do a trash job on the mode from the start, and insists on "dragging the ARS into the
future" and away from the dastardly "hazing ritual", to quote
The Squig. Such rhetoric doesn't bode well for the viability of CW, as you well know. And

you couldn't care less, of course. You'd
prefer ham radio to be just like CB.

On the contrary, it has everything to do with the merit of Morse/CW.
After Morse testing is dropped, CW will be forced to stand alone on
its own merits. You had better hope that CW has enough merits to
survive. I believe that CW will still be going strong after I'm
pushing up daisies.

This has nothing to do with the "merit" of the Morse code,
Cecil. It has to do with the willingness of people who have
no direct personal experience in using it to invest the time
and effort to learn it at a useful proficiency level. 5 WPM
is NOT a "useful proficiency level." In the absence of a
code testing requirement of at least 12 WPM, usage of CW
will certainly decline in the fullness of time.

CW is fun.

> NCI has decided
> to do a trash job on the mode from the start, ...

That's simply a lie, Dick, which can be seen from statements on
the NCI web page. You continue to confuse Morse code testing with
CW, the mode. When are you going to comprehend the situation?

> gets through when other modes.......". NO mode gets through when
> there is NO useful signal path! What the heck is wrong with you???

Which, to be correct, your stateent should have been phrased...

CW *MAY* get through when all the other COMMONLY USED modes fail.

> > >>Shannon's theorem does matter.

I agree...but the occasions when such results required use of morse
are so very limited, they do not hold sufficient merit to sustain requiring
morse knowledge anymore (IMHO and in the opinion of the FCC).

> prepare for another FCC test?

Why would that be needed. I and many other hams pursue additional knowledge all the time. Asking for a new test would limit my pursuits to a specified syllabus of subject matter...all or most of which may hold zero interest to me and many others. Far better to let hams pursue their own path to additional knowledge based on their own interest.

Dick,
If you don't think your statements above clearly imply "always"
then you need to take some logic classes. If you said "May"
get through...you'd be at least correct regarding your lack
of implication.

> Surely your vast experience as an engineer and a longtime ham has
> included this ordinary but definitive experience.

The point, however, is that when and if "the other modes have dropped
out" it is not at all the case that CW will indeed Get Through", since the
possibility is indeed there that nothing, not even code , may be able
to get through "after the other modes have dropped out..."

True....and that's as it should. That is no different for many
other pursuits.

Archery, driving manual gearbox autos, ice skating, golf,
thousands of first aid squads, thousands of volunteer fire
departments, thousands of Aux police units, etc. etc.
All are "volunteer" activities that require learning skills.

I think ANY expansion of the phone bands is a waste of spectrum.
All throughout the Code/No-code debate, we've been hammered with
the argument that "the future is digital." Now it's time to put
up or shut up. If anything, I say the phone bands should be
REDUCED to make more room for a vast expansion of digital modes.

Hams still have the authorization to put homebrewed transmitters
on-the-air, therefore the technical basics must still be covered
in the written theory tests. To eliminate that testing would doom
us to using strictly type-accepted transmitting equipment, and
consign us to the CB'er level from that point on.

> even if S25 is struck next year.

Yeah, the next decade, maybe a bit more, but that would still be
covered by the people who learned Morse code under the Pre-Restructuring
ERA licensing requirements. The first thing I'm going to do if and
when S25.5 goes South is to offer a Morse code class to my radio
club. We'll see then just what the future of Morse code really will
be! Right now, I'm not getting any takers, even from people who
only need to pass 5 WPM for a General or Extra ticket!

> >>After all,

A problem with "emergency" communications at a local level is they
tend to exclude all but a very closely intrenched and exclusive
group of "insiders" at the local levels, making it hard for rank-
and-file club members to participate in a meaningful way. Lots of
excuses are given, such as "the local officials want to be dealing
with the same people all the time," but in the end, it usually just
amounts to glory-grabbing, which seems to me to be the major
motivation for a lot of "emergency communicators" anyway. When
hams show up for some "emergency communications" exercise, only
to find they have nothing to do, then they usually give up on it
and leave it to the insiders. I've seen this happen virtually
everywhere I've been since I've been a ham.

When the NCI says "Manual radiotelegraphy communications has been
superceded by more modern, reliable, accurate, faster and efficient means
of communication", they most certainly are discouraging anyone from
learning CW. Who wants to use (following NCI's logic, such as it is) an
antiquated, unreliable, slower, inefficient means of communication?

> It is not up to the ARRL or the FCC, either, to give credence to any
> mode over another--such as happens with the sanctioning of CW testing.

It most certainly is up to both. That's why there's both FCC-enforced
bandplans and ARRL voluntary bandplans. That's why FM is prohibited on most
HF bands. That's why you can only use CW and FSK on 30m. Are you saying
that both organizations are out of line in doing so?

Ed:

Almost 14 years of being called "lazy" and "no-good" motivated me
to prove that those who were saying it were wrong. And make no
mistake, I wasted all that time that I could have been a ham for
no other reason but that I *was* lazy -- but the fact that I
overcame my laziness disproved anyone who said I was "no good."
Unfortunately, when S25.5 is eliminated, we will no longer be
able to distinction, so those of us who were able to prove
ourselves will always have our doubts about any newcomers who
do not "embrace" the Morse code, and learn it to a useful
proficiency level on their own initiative.

Or use a good computer aided code decode program.
Software and computer hardware are cheap and reliable enough
to be used in any likely scenario that the old CW transmitter and
receiver and code key setup used to be.

Your problem Dick is a lack of logic in your statement.
You are free to make the statement you did above, but I note
the lack of any "in my opinion". The fact remains that if someone
failed to do "what was required to get the license and got on without
lives."
in no way leads to your conclusion that in not doing so, "Carl and his
type are discredited for their attitudes and lack of initiative."
YOU are free to believe whatever you want, but there are millions of
people who are far more motivated than you or I that make
their own judgements as to where, when and how they use their
discretionary time to pursue many things that are non-ham. Is one
of the local volunteer firemen to be castigated as being discredited
and having a lack of initive just because he may voice an interest in being
a ham,
but doesn't do so?

> Do I really believe that many new hams will actually achieve proficiency
in CW
> operations now that no one is required to do it?

Absolutely they will.

> Why in the world would they?

For personal reasons, curiosity, or whatever.

> Sure, a few will find enough reason to,

Exactly...glad you can at least admit it.

> ...just as a few
> always found enough interest in doing so before there was any added
official
> privilege in it. For example when Incentive Licensing came out in 1968
there were
> fewer than 5,000 Extra class licensees.

And the primary reason of those low numbers was because there
was no benefit to getting the Extra. Did those low numbers of Extras
mean that hams were not self educating beyond what was
required to get the General? Are you suggesting all the hams that
stopped at General lacked initive?

> Soon the number began to climb due to the
> incentives involved; learn and pass the tests and as your reward you got
extra
> frequency previliges.

Carrot and stick approach.

> Today no such incentive exists.

When did the FCC drop the exclusive Extra band segments?

> Also the higher speed code
> tests, as they have existed for most of the period of some 18 years since
the
> beginning of VE testing, are considerably easier to pass than when it
required a
> solid minute of five at the FCC office.

So what. Clearly neither you nor anyone else was able to
convince the FCC of any rational, compelling need to retain
the "higher speed" tests. At this point, it is now you that
whines and moans about the status quo because you didn't
prevail with NPRM 98-143.

> This has greatly enhanced the number of higher grade licensees.
> Today all privileges are awarded for what is only the most elementary
level of
> code training,

Ditto my last comments.

> and to become proficient in the mode requires the same commitment
> of time and interest that was found to be far "too much" for so many
necomers.

The same is true for many other things in life that have
no test requirement at all...yet people still pursue them.

> Where does anyone find any indication suggesting a change in that
attitude?

Why does there need to be any attitude change?

> Just because it is no longer demanded as a test requirement, does anyone
really
> believe that now it will be so attractive that newcomers will flock to it?
I think
> that is a daydream.

I agree.
Your problem is that you have an unrealistic expectation or demand
that "newcomers flock to it (code). Why? Your mission Dick,
should you choose to accept it, is to be a recruiter for morse usage.

The burden of sustaining interest and a following for morse is now
far more on the shoulders of morse devotees...and that is going
to become a total responsibility down the road. You can accept that
and be a proactive recruiter or you can turn your back on it
and let others try to do it without you...the choice is yours.

Cheers,
Bill K2UNK

4595. Re: Is ARRL going the way of ENRON??

The important question is: what belongs in QST?

The size of the mag has risen and fallen before, due to costs and things like paper rationing during WW2. Content has always been a controversial thing - some say it's "too technical", others say "too many contests", etc.

But as the official journal of the ARRL, it seems to me that QST simply must contain things like the BOD minutes, financial statement and section news.

Ways to save money:

- Less use of color
- Less "white space"
- Smaller type size for some things
- Less commentary on BoD minutes and contest results. (Note the size of the actual minutes vs. the explanations of them).

The "hazing ritual" is the TEST. NCI does not oppose you,
nor anyone else, lauding the merits of code to newcomers.

> > Because Morse/CW can solve some communications problems?
>
> Ah, but you, Kandid Karl et al insist those problems will forever be
> solved by the latest technology!

So? People are free to propose their own favorite approach
to problems. Today, and more so in the future, morse will
simply be another mode of choice where the choice is driven
what individuals learn about the mode from others. Do you
fear the competition with other mdoes?

> > Because Morse/CW is fun for some people?
>
> Almist invariably those are people who learned Morse code for

NCI has decided
> to do a trash job on the mode from the start, and insists on "dragging the
ARS into the
> future" and away from the dastardly "hazing ritual", to quote
> The Squig. Such rhetoric doesn't bode well for the viability of CW, as you
well know. And
> you couldn't care less, of course. You'd
> prefer ham radio to be just like CB.

Your gross exaggeration of NCI's position on code
is pathetic. The TEST is what we (NCI) oppose. Get
that straight once and for all. The TEST is the hazing
ritual. In the absence of a test, the personal commitment
of time and effort by any indivdiual to learm code (or anything
else) is their own decision. YOU can influence, recruit,
or ignor newcomers as to gaining new code users and
NCI has no concern as to your efforts. Some may disagree
with your claims, and that is true for any mode.

Cheers,
Bill K2UNK

In 1964 there were NO Extra class band segments.
Ed moved to 25 wpm skill set simply on his personal
efforts...without any incentives for additional
spectrum.

>You are mistaken ...

Am I? Let's look at what the PUBLIC can see...

>IWG-6 produced a Draft US Proposal for the revision of S25,
>which included the "suppression" of S25.5. (eliminating Morse
>testing from the ITU Radio Regs) ... I know because I was there
>personally on behalf of NCI and was part of the discussion.

The July and September meeting minutes say you were on the
"phone bridge." Is that video teleconferencing or just audio?

The third revision of the draft on AGENDA item 1.7.1 is indicated
as COMPLETED on 11 July 2001 by Paul Rinaldo (ARRL).
That's the LATEST document on 1.7.1 as given in the separate
IWG-6 listing of all documents.

Anyone in the PUBLIC can look at the US Preliminary Views,
RCS-1363_Rev2, of October 16, 2001 and see NO, repeat NO
mentions of ANY agenda item 1.7, not 1.7.1 the code test item,
not 1.7.2 the call sign revision item, not 1.7.3 the terms and
definitions "legalese" item.

The Preliminary Draft, DA 01-2168, 17 September 2001, mentions
ONLY 1.7.2, 1.7.3 out of the three for 1.7, absolutely NO mention
of 1.7.1.

>While in all honesty, I have to admit that I wish Walt would
>produce the minutes of IWG-6 meetings more promptly,

>I also have to come to his defense to some degree as well,
>as I know he has many other responsibilities and spends
>a good deal of time in Geneva at ITU meetings as well.

I don't accept excuses of "too much workload" there. If there
are too many things to do, then SOMEONE ELSE should be
there. A four-month minutes write-up delay is ridiculous.

>That is not correct ... IWG-6 produced and approved a DRAFT US
>Proposal on Agenda Item 1.7 and that Proposal was approved by
>the WAC (the FCC's WRC Advisory Committee).

Okay, I'll bite, WHERE THE HELL IS IT? All I see is the 3rd draft
proposal IWG-6/049(Rev.3) listed and its not available to the public.

>What you see is not always all you get ... the ARRL was represented
>in IWG-6, but so was NCI ... the mutually-agreed (and approved)
>result was a draft proposal to change S25 to eliminate the Morse
>requirement from the ITU Radio Regs.

What I see is what the PUBLIC sees. The ACTUAL position on
agenda item 1.7.1 is UNKNOWN. It could be either way.

It may be fun as hell to be an "insider" but the PUBLIC doesn't know
from shinola on it. Maybe the position is pro-code, something that
would make the PCTAs deleriously happy. Maybe the position is
no-code-test. That agenda item is NOT a classified document that
would be a danger to national security if released to the public.

>I spoke with the lead person in the FCC's international bureau
>just the other day and was told that it was NTIA that was holding
>up the final release of a formal "agreed by all" (FCC/NTIA/State)
>US Proposal ... but not over the Morse issue, but over some
>apparent confusion or missunderstanding about some other
>aspect of the revision of S25 ... and that it was expected that
>the matter would be resolved shortly.

Look on the List of Documents for IWG-6. According to that, the
NTIA already did their "P.V.s" (Preliminary Views) on 1.7 et al
back on May 23rd, 2001. Hello? Can you deduce over a half
year and a bit more since then?

On the FCC document (mentioned before) on Preliminary Views
(lots of agenda items there done by other IWGs) of October 16,
2001, there are NO item 1.7 mentions. The NTIA has been
involved with OTHER agenda items and OTHER IWGs, so what is
the "excuse" really meaning?

What the hell, I'm just a citizen and a military veteran who votes
regularly and tries to stay aware and informed. Neither I nor a
PCTA can see into the "insiders" world, can we?

Pfui

So why do people still learn archery for hunting?
Manual gearbox for driving?

Do you deny the staements we (NCI) made as being true? If so,
feel free to argue against them. Regardless, CW does still have its
niche and, if properly promoted by those that truly like it, there
will always be a niche of CW users/enthusiasts.

Do you understand that the USA is one of only
a few countries that have such bandplanes?

As to the ARRL...those bandplans are not the law.

> That's why FM is prohibited on most
> HF bands. That's why you can only use CW and FSK on 30m. Are you saying
> that both organizations are out of line in doing so?

There is a clear and compelling reason to keep FM out of
the HF band segments. Indeed, the same is true for
commercial FM. Other than that, in most countries,
there are no or minimal mode specific HF bandplanes.

Cheers,
Bill K2UNK

Cute, but portraying a mode as inefficient, unreliable, etc. is
discouraging it.

> Do you deny the staements we (NCI) made as being true?

Ah yup.

> If so, feel free to argue against them.

Thanks for your blessing, but I already do.

> Regardless, CW does still have its niche and, if properly promoted by

True, but it would be a tremendous help if people who didn't like a mode
testing requirement would not make the mode itself into the arguing point.

>> It most certainly is up to both. That's why there's both FCC-enforced
>> bandplans and ARRL voluntary bandplans.

If you're arguing against the use of mode-specific bandplans, mandatory or
otherwise, I don't think you'll have much company.

You are free to feel that you were able to prove yourself.
You are free to have doubts about newcomers. You are free
to be wrong on both counts. You didn't prove anything of
value to the vast majority of people. You simply met the
requirements in order to gain privileges just like people
are doing today and will do in the future.

Yup, and they use the telephone instead of shouting from hill to hill. :-)

Rememer, the ARRL Board has not made up its mind about Section News in QST. If you feel a small paragraph of mouse print with several months of lead time is more useful to the membership than a web presentation that can more information, larger print, links, pictures or sound, let your Director know what you feel.

If you feel ARRL should divert some if its resources from <name it> to doing both, let your Director know that, too.

As you can tell by my slant above, I may not say the same things you do to my Director. :-)

Nonsense! What it implies is what happens in real life on HF on the air.
When the voice modes have faded into unintelligible mush, and
RTTY, Packet and PSK31 are printing gibberish, CW can still be copied -that

is, if the operator has bothered to learn it! It'll be weak but
intelligible! One may have to use his skill as an operator
to adjust his receiver to provide adequate copy, but for some length of
time, as the band continues to fade out, CW will indeed
"Get through" after the other modes have dropped out - failed.
Surely your vast experience as an engineer and a longtime ham has
included this ordinary but definitive experience.

>But as the official journal of the ARRL, it seems to me that QST simply must
>contain things like the BOD minutes, financial statement and section news.

The financial statement is required by postal law, I believe.

The League already publishes much of its official Board business on the web.
All of those committee reports are not published in QST.

>- Less use of color

How would this impact those who see QST as only a subscription?

>- Smaller type size for some things

I don't think that Board minutes, contest results and Section News could be
made any smaller. :-)

>- Less commentary on BoD minutes and contest results. (Note the size of the
> actual minutes vs. the explanations of them).

I disagree. The commentary explains things that go past the line scores and
formal minutes. I do not read every set of minutes, but I read the articles
about the Board meetings.

Larry is apparently trying to convince people that CW has no merits.

This is absolutely bizzarre; some of the "pro CW test" folks believe that they should tell people that CW has no merit, while some of the no-cw-test folks believe they should tell people that CW does have merit.

That really should tell us how twisted this has all become.

Hey,Slick..... I am fully aware that you have not actually had any
experience with radiotelegraphy on the air, but what I stated is FACT and has
nothing to do with logical order or any of your other
nonsense. It is a simple fact that when conditions deteriorate to the point that
SSB cannot be copied there is a period during which further deterioration of
conditions allow CW to *still* be copied.
That is and has always been the case. You and Stupid may stuff your alleged
logic. It just isn't logical.

>Carl Stevenson at the helm, and you helping out)
>to do anything but urge newcomers
>to not waste their time with such a "hazing ritual"?

Are you not telling them not to waste their time if there is no test for Morse code proficiency because it is not useful enough to learn unless there IS a test?

Carl must love you!

>> Because Morse/CW can solve some communications problems?

>Ah, but you, Kandid Karl et al insist those problems will forever be
>solved by the latest technology!

So, does this mean that you think the usefulness of Morse code cannot even stand up to what Carl and Cecil say?

>> Because Morse/CW is fun for some people?

> Almist invariably those are people who learned Morse code for
>licensing or use at work in the case of oldtimers. Should we expect
>any serious number of newcomers who just can't find time to study
>to learn it just because someone said "Hey, that sounds like fun"

Do you think the above statement makes Morse code sound fun? Telling newcomers that they won't bother to learn it unless there is a test makes it sound onerous, Dick.

>when so many Cecils and Carls out there relegate it to the status
>a novelty?

And what status are you offering in counter?

>> Because Morse/CW is logical to use with QRP kits?

> Don't you think those kits will be built by people who already
>know the code? Do you REALLY think that CBers like Kim are
>gonna say "Oh, geez I could really get off on learning that Morris
>code and doing it on Qrp!!!" Yeah, verily!

Okay, so because a few hams won't be interested in kit building and QRP, you think you should continually put down the mode by telling everyone that you

think it is not worth learning?

>> Because hams like you and me promote the mode?

Somehow it fits that Dick didn't respond to that part of your post...

Yep, as long as you have a great signal to noise ratio, current
computer decoding programs work OK. But when things start to
deteriorate, you will find them printing gibberish.

This could be interesting, so let's have you start, Dick. What things will you say to new hams to encourage them to learn and use the code if there is no testing for Morse proficiency?

Why do you believe that digital should be limited to computer-to-computer operation, or at least believe that the amount of spectrum made available to voice or image digital operation should be reduced? Much digital operation in the rest of radio today is voice.

In slapping that brush around to paint Carl, you have said some things that I feel would be very offputting to potential newcomers.

Why don't you settle the matter and send Carl an insultive email once and get it over with, then say things here that will be directed at helping to interest new people in ham radio and Morse code?

Hi Keith,

Yep, there are some folks that try their darnedest to apply a cold steak to the black eye of CB/11-meters. This includes the effort to put Morse back on 11-meters. Only a funny thing happened when I did, I discovered that Morse had really never left. While certainly not in any numbers that would rival 10-meters, but sufficient enough to impress a skeptic. The first task at hand was to procure (Or build!) some older Part 15 gear. I bought a Signature, Jr. off of ebay and a Concept 2000 for my niece. Bith of these "rigs" put out a whopping 100mW. We managed to cover 15 mi. through some pretty fair QRM with these. I will admit to "bending" the rules a tad by connecting the Sig, Jr. to a 2 el. wire quad. 0:-)

Look on ebay, Keith. You'll find these units, often still new (The Sig, Jr. was.) in the box, at very reasonable cost. I think I paid eleven bucks or so for the Sig, Jr. and twenty for the Concept 2000. And the Concept 2000 came with a base unit and a h/t. (Same innards, different housings.) BTW, I don't believe the 155 mi. rule does not apply to 100mW Part 15 devices, so if I hear you...I'll try to work you.

Here's my next project. It's meant for the HTX-10, but I'm adapting it for a TRC-485. The TRC-485 is basically the same rig in "legal 40" trim.

http://www.qrparci.org/p28.PDF

http://www.qsl.net/n5ib/page2.html

http://www.qsl.net/wb8rcr/cwadapt.html

They're all variatins on the same theme and are NOT internal modifications to the transmitter proper. See you on 27.1250 MHz. Good luck, Keith.

I don't understand the statement, Dick. What band segments do you think I
didn't have access to as a General? I don't recall any, but if you know of
some obscure rule that I don't remember, I am willing to be corrected.

You and Cecilia are what is bizzarre. OF COURSE cw has merits.
We've enumerated them at length. One of them is NOT that it is
learned quickly and without significant investment of time and effort.
(Ah, there's that nasty FCC-absent word again!)
If you think that all those busy folks who "just couldn't find the time
in my busy schedule" will now suddenly get religion and find some
of that time, yer dreamin'.

> That really should tell us how twisted this has all become.

Not without "effort" on the part of those who couldn't care less
about whether or not CW survives.

Nope, if I want to look at porn, I'd probably buy a good magazine or
something. I stay off the sites on the WWW. I've been very fortunate to
keep from getting spam mail all the time and staying off sites like that is
part of what I attribute that to.

Sorry you're so disgruntled <GIGGLE> that the observation was made that you
were the only one in the entire read/post subscribership of the newsgroup

that responded to the original message. I haven't seen your feathers this ruffled in a long time...

Which is to say, if you rely on a computer program to do the job
you will be let down when you least expect and most need it to work. In short,
manually operated CW gets through after the other
commonly used modes fade out. Computerized CW does not.

Well, I am so happy for you that you have found some protection from the
actions of reading such messages. I just as easily exert discretion as to
what type of email/newsgroup messages I open. Men don't seem to have that
kind of self-control, though.

Add to that the fact that even *if* CW "gets through when other modes fail,"
it should never be more relied upon than any other mode, phone included.
For each and every circumstance in which phone won't work, packet won't
work, 20M won't work, CW won't work, there is a likely circumstance that
will take its place. No mode should be "favored" over another for
reliance--they all have their place.

If predominance of understanding the language is the primary motivation,
then voice should always take the front seat...

Must have been your wording. You said "there *are* no added priveleges in it".
If the word had been *was* it would have changed
the meaning. Beginning in 1968 there were added privileges in 20wpm>, if one
took the Extra test.

So, you are actually saying that you have homebrewed transmitters on the air, Larry? I mean, after all, it seems as though you are pretty darned opposed to type-accepted equipment--in fact, would even equate that with some damned, darned 'ol CBer.

What homebrewed transmitter do ya have? You must share shop space and design tables with Little Dick, I bet!

Larry, if your personality in any way matches what I've seen of it here on this newsgroup, I'm surprised there's nothing but moans and groans from people when you walk into a room. Who in the world would ever approach taking any "class" from you--if they know anything about you?

Wow, yep. Sounds just like some of the arguments about RACES down here. You're describing local politics and poor leadership, Larry--NOT the state of emergency communication.

>
> When

Well, I think they've been trying to drop you a hint. Were a person with your personality to even approach an emergency communication group that I had any leadership in, I'd do my level best to dissuade you from participation--you can be sure of that.

Again, the politics of emergency communication: people leading who can't or have no business doing so; people who are in the "hip pocket" of others; etc., are local and should not be considered to the "state of" emergency communication in ham radio. In fact, while those incestuous little groups are left alone to do there thing...there's often a lot of good work going on elsewhere.

And why this surprises anyone is one of life's minor mysteries. Decoding Morse has several problems including variable-length coding but the biggest one is that No-Signal is one of the states to be decoded. Is it any huge surprise that when Teletype Corp made it work beyond the DC loop it was done with two discreet tones so that no-signal was a distinct condition that could be responded to, or not responded to more precisely.

From Carl's perspective, Morse is ridiculous although the 'legacy mode' schtick tends to remind me of DP jocks trying to avoid some work by consigning all that exists to the netherworld, much to the consternation of their employer who is trying to make a buck on the investment and pay for the brave new world.

And so we have the three-cornered war:

Group A: You gotta quit using or requiring anything that fakes out my compooter.

Group B: I earn my living on a keyboard as a number of us do or did. I need a busman's holiday like Custer needed more Indians. Something fun about wetware.

Group C: I came to yak and work dat dere DX. Why can't I get my ticket from a Post Toasties box and go down below 14.150 and chase ZingaZuluLand?

Makes for an interesting spectator sport but it is not likely anyone will win the war. If A&C successfuly defeat B, the resulting conflict will be legendary.

Len,

I was not and am not trying to insult you ... merely to
tell you the facts as I know them. To be candid, the
FCC's WRC website does not always contain every
detail, nor is it always completely up to date (there is
an inevitable lag between things happening and their
getting posted ...) This is not to criticize the FCC,
either ... it's just a fact of life.

> >IWG-6 produced a Draft US Proposal for the revision of S25,

> That's the LATEST document on 1.7.1 as given in the separate
> IWG-6 listing of all documents.

If the minutes say I was "on a phone bridge" that means I was
unable to be there in person and participated via teleconference.
In the case of the September meeting, I was in Portland, OR for
the IEEE 802 conference for the week (a work committment), but
Bruce Perens was physically at that meeting if you'll check the
attendance list which you seem to have. I was there in person
at prior meetings when the major points were argued and
hammered out (if you don't believe me, ask Dave Sumner
or Walt, who I'm sure thought I was a real pain in the ass for
the, as I had some issues with some "IARU party line" language
which they wanted to get into the US position. :-) The rev 3
document was just a "clean copy" for approval, containing only
updates which were agreed at a prior meeting and that version
was circulated electronically to the IWG-6 participants in advance
of the meeting ... I had a copy. The Sept. meeting's action on
the IWG-6 draft proposal to the WAC was simply final review
and approval of the last edits ... which resulted in NCI's withdrawal
of its final objection to the content of the document.

> Anyone in the PUBLIC can look at the US Preliminary Views,
> RCS-1363_Rev2, of October 16, 2001 and see NO, repeat NO
> mentions of ANY agenda item 1.7, not 1.7.1 the code test item,
> not 1.7.2 the call sign revision item, not 1.7.3 the terms and
> definitions "legalese" item.

The RCS preliminary view is something different from the FCC
WAC preliminary view ... different parts of the govt. develop their
own preliminary views, which may differ slightly from each other.
Then those have to be resolved to mutual agreement through
what amounts to a "conference committee." Remember, this
is the govt. ... nothing is as simple as it might be had you or I
designed the process ... but that's the way the process is.

> The Preliminary Draft, DA 01-2168, 17 September 2001, mentions
> ONLY 1.7.2, 1.7.3 out of the three for 1.7, absolutely NO mention
> of 1.7.1.

I know ... I explained below that there were some questions
or confusion about something that had not yet been resolved,
but my understanding is that the matter should be resolved
shortly (perhaps was resolved this past week ....)

> >While in all honesty, I have to admit that I wish Walt would
> >produce the minutes of IWG-6 meetings more promptly,

> >I also have to come to his defense to some degree as well,

>
> I don't accept excuses of "too much workload" there. If there
> are too many things to do, then SOMEONE ELSE should be
> there. A four-month minutes write-up delay is ridiculous.

The ARRL has, as I understand it, 3 people in its Washington
office ... Walt, Paul Rinaldo, and Johnathan Siverling ... with
all of the IWG-s and other WRC preparation, plus things like
the SAVI RFID proposal which threatens interference in the
70 cm band, plus all the other things they need to follow, they
ARE *VERY* busy folks ... I see Walt at several other meetings
which I regularly attend in Washington ... and I believe that Walt
and Paul each spend something on the order of 3-4 MONTHS
per year in Geneva (in the aggregate), attending meetings there.

Yes, as I said, I'd like to see IWG-6 minutes produced more
promptly, but I know from personal experience with my own
work that sometimes other things take priority and some things
have to be put off occasionally. Like me, Walt can only be
in one place at one time, has only so many hours in the day,
and has to prioritize. Should the ARRL increase its staff in
Washington? Perhaps, if they can raise enough $$$ to fund
such an expansion. However, in the meantime, they have to
do the best they can with the resources they have in place.

> >That is not correct ... IWG-6 produced and approved a DRAFT US

>
> Okay, I'll bite, WHERE THE HELL IS IT? All I see is the 3rd draft
> proposal IWG-6/049(Rev.3) listed and its not available to the
public.

I'm not sure I'm remembering correctly, but I *think* that a copy
may have been published in "The W5YI Report" ... I would guess
that if there is not a copy on the FCC website as a "WAC" document
that it's either an oversight, or it was decided to wait until the
inter-
governmental issues had been worked out. (speculation on my part)

> >What you see is not always all you get ... the ARRL was represented

- From what I know, the PCTAs will not be deleriously happy ...
I have no control over what is posted publicly, what is not,
or when it gets posted.

> >I spoke with the lead person in the FCC's international bureau

Nothing more that the delays that are not unusual in large
bureaucracies ...

> What the hell, I'm just a citizen and a military veteran who votes
> regularly and tries to stay aware and informed. Neither I nor a
> PCTA can see into the "insiders" world, can we?

I'm sorry that you're offended in some way at not being as
aware of what happened as those who acually participated
in the process. I guess it's just another case of the wheels
of govt. moving slowly ... but I have no reason to believe that
there is any "funny business" going on, or that the final outcome
will be "pro-code."

>> antiquated, unreliable, slower, inefficient means of communication?

BINGO. If it's about the TEST, attack the TEST.
>
>So why do people still learn archery for hunting?

Several reasons:

- it's fun
- it's more of a challenge
- it's quiet
- regulations on bows are different
- in Pennsylvania, at least, there's a special season for bow hunting of deer.
This is, in effect, a "setaside for legacy weapons" because deer hunters
cannot
hunt with a gun during bow season. The hunter who can use both a bow and a
gun has the best chance of getting a deer.
- Archery is also used for target competition (and raising antennas)
- Nobody that I know of is going around saying "archery for hunting has been
superseded by more modern, reliable, accurate, faster and efficient hunting
weapons". That would be discouraging anyone from learning archery. Who
wants to use an "antiquated, unreliable, slower, inefficient means of
hunting"?

>Manual gearbox for driving?

- it's fun
- saves fuel

- more control over a vehicle
- ability to drive any car, regardless of trasnsmission, is a desired skill
- some vehicles only have manual transmissions. This is, in effect, a "setaside for legacy transmissions"
- Nobody that I know of is going around saying "manual transmissions have been superseded by more modern, reliable, accurate, faster and efficient automatic transmissions". That would be discouraging anyone from learning how to shift and use a clutch. Who wants to use an "antiquated, unreliable, slower, inefficient means of driving"?

>Do you deny the staements we (NCI) made as being true?

Some of them, yes. The context of others is misleading, too. For example, does it meantion anywhere that Morse/CW is the second most popular mode on the amateur HF/MF bands, only slightly behind SSB and way ahead of all allegedly "more modern, reliable, accurate, faster and efficient" modes?

> If so,
>feel free to argue against them.

I have. But one cannot post to NCI's website. You do not want opposing opinion.

The very name "No-Code International" implies anticode, not antitest. Had you folks chosen simply "No Code Test" or "No Code Test Association" (NCTA) it would be unambiguous.

Not just on HF/MF but on VHF/UHF. Try working high power CW on a repeater input and see what the FCC and ARRL positions are.
>
>Do you understand that the USA is one of only
>a few countries that have such bandplanes?

It would be interesting to see a list of countries with and without bandplans, and
the ham population of each. Most countries with significant amateur populations

DO have bandplans.
>
And the USA has them for very good reasons.

>As to the ARRL...those bandplans are not the law.

True - but violation of them without good reason is viewed by the FCC as poor operating practice.
>
>> That's why FM is prohibited on most

What are those reasons? If they exist, then the same or similar reasons apply to keeping voice modes out of the CW/digital subbands.

>Indeed, the same is true for
>commercial FM. Other than that, in most countries,
>there are no or minimal mode specific HF bandplanes.

Let's see a list, complete with amateur populations.

Once code testing is eliminated, are bandplans the next target?

They most certainly are *not* discouraging anyone from learning CW, Joshua.
I'd be disappointed in anyone who translated a desire to see CW ended as a
testing element, into a desire to see all CW go away. That kind of
interpretation is reactionary and nothing more. Who in the world would ever
discourage someone else from learning anything? I don't think we're about
to start relying on wagon trains any more, either, but I'd wholeheartedly
encourage anyone to learn any skill associated with wagon
trains--horseback riding, blacksmithing, cooking, range life, etc.

The FCC, I'm sure, does not make regulation based on mode preference;
rather, based on most efficient use of spectrum. I'm sure the FCC used some
logic in deciding to set aside a band portion (30M) for the exclusive use of
data technologies so that experimentation could prevail, once again, using
the most effective bandwidth and without interference from other modes that

require greater bandwidth. FM is prohibited on most HF bands due to bandwidth--not because the FCC "doesn't like" FM.

No, the FCC nor the ARRL should have in their domain the decision making power to provide or withold spectrum based on what they think is the best mode.

And, I bet you'll leave no room for anyone to think of people like you as
nothing but ritualistic, sadistic, miserable coots...who have nothing
positive to offer anyone or anything.

Yep, you'll be passed by as nothing but insignificant to the newcomers. You
think they are going to waste their time feeling bad about how *you* think
of them? That's a big ROFLMAO...

Nope, CW is not a worthless hazing ritual. The "lazy whiner" part is.

Hey TwIT, I never open your posts any more, but it's early, my coffee hasn't done its thing yet, I clicked on 'next', and damn, there was another of your "thoughtful" statements....

W5TIT - Kim wrote:

> Add to that the fact that even *if* CW "gets through when other modes fail,"
> it should never be more relied upon than any other mode, phone included.

ATTENTION W5TITs..... Who was it that *ever* said that CW should be relied upon more than any other mode??? Hmmmm???

Would you like to go back and do some badly needed remedial reading to see what WAS said? I can help, and obviously you need it. It says that "when conditions deteriorate to the point that other modes commonly in use (you know, those that virtually all HF hams have available to them in their radio shacks) will no longer work, it is almost always the case that CW can still be copied - by a ham who has trained himself to do so".
Is there some specific point in that sentence that you would like to have further clarified?

> For each and every circumstance in which phone won't work, packet won't
> work, 20M won't work, CW won't work, there is a likely circumstance that
> will take its place.

????? Let me rub my decoder ring and we'll see if it can get anything out of that sentence.

> No mode should be "favored" over another for
> reliance--they all have their place.
>

Uhhhmm, Duh, I do believe that is obvious, not to say it's also what we've being stating in no uncertain terms for a LONG time, right 'ere on dear ol' rrap, girl.

>
> If predominance of understanding the language is the primary motivation,
> then voice should always take the front seat...
>

Profundity perSohlified! That's Bill Sohl-ified.
And when voice turns to mush because of deteriorating HF band conditions, well, language goes with it. Yep, that's the way it works, Ol' Gal.

"Much company" isn't the reason someone should enter into a debate about
something one way or the other. I don't Bill Sohl makes his argument due to
a desire for popularity. Is that why you make yours?

Kim's statement is true ... NCI policy is NOT against Morse usage,
and NCI has REPEATEDLY stated publicly that there is NO intent
or agenda to seek any sort of ban on Morse usage at any point in
the future.

> When the NCI says "Manual radiotelegraphy communications has been
> superceded by more modern, reliable, accurate, faster and efficient
means
> of communication", they most certainly are discouraging anyone from
> learning CW.

No ... simply making a statement of fact.

Also, please note that both the ARRL and the IARU AC have
adopted resolutions acknowleging that the continuation of
a requirement for Morse testing in the ITU Radio Regulations
is no longer necessary ... the IARU resolution even aludes
to continued Morse requirements not being compatible with
a healthy future for the ARS (paraphrasing, I don't have a
copy of the resolution text on this computer ...)

> Who wants to use (following NCI's logic, such as it is) an

testing.
>
> It most certainly is up to both. That's why there's both
FCC-enforced
> bandplans and ARRL voluntary bandplans.

The FCC has merely portioned certain segments of some
bands for "narrowband modes" and "wider band modes."
They have SPECIFICALLY declined to "codify" the ARRL
bandplans. In the vast majority of the world, there ARE not
govt. mandated sub-band restrictions on mode usage ...
this does not seem to have caused any perceivable problem
requiring regulatory action by those other administrations.

>That's why FM is prohibited on most HF bands.

FM is prohibited on most of the HF bands because those
bands are relatively narrow and FM usage would be an
inefficient use of the spectrum ...

>That's why you can only use CW and FSK on 30m.

The 30m band is only 50 kHz wide ... it makes sense
in terms of spectrum utilization in such a narrow band,
but it is NOT a statement on the "overall superiority of
Morse."

More importantly, it brings us back full circle to the main argument made way back in the beginning that everyone on the CW testing side just absolutely said was not true. The reason they want CW to remain a testing phase is to keep the riff-raff filter on.

Well, let me say that I think CW is a pretty darned antiquated mode, myself.
But I in no way would discourage someone from learning CW. More power to
'em if they do.

I can't imagine that Carl Stevenson would sanction someone not learning CW.
If he does, then he's an idiot--plain and simple. But I don't think he
does.

- From the standpoint of what's technically feasible (and often
available in other services), I believe that CW is antiquated.

> He has never said
> that he believes CW operation should be forbidden.

In fact, I personally, and NCI as an organization, have repeatedly
stated that we do NOT believe that CW operation should be banned
or restricted.

However, many of those who wish to continue forcing Morse
on everyone by govt. mandated proficiency testing as a condition
of obtaining a license with HF privs seem to "conveniently" ignore
those statements (or even falsely outright claim them to be lies).

I agree in part with Larry (yes, I know it's scary ... :-) I
personally
don't favor an expansion of the phone bands (but I also don't favor
a reduction) ... the growth of digital modes can be accomodated
in a variety of ways ... narrowband modes can operate in the lower
parts of the bands, as they do today ... wider digital modes, such as
digital voice (just one example) could operate in the upper parts of
the bands.

The primary problem, as I see it, is that many people simply
don't understand digital modes and their potential, and harbor
(often excessive, or unjustified) fears that "new digital modes
will screw things up for my favorite mode."

> Hams still have the authorization to put homebrewed transmitters
> on-the-air, therefore the technical basics must still be covered

Again, I agree with Larry ... the technical basics MUST
continue to be a part of the license qualification tests. We
are (at least supposed to be) a service, at least in part,
of tinkerers and experimenters ... to have strict type-
acceptance (and the limitation to commercially-produced
equipment that that would imply) would be disastrous.

WHAT???!!! Are you actually saying that to inspire someone to do something, one must also do it theirself? In order for me to provide encouragement to learn and appreciate CW, I must use the mode?! My amazement of the mode has done more to convince newcomers to at least give it a try than my not using it, Little Dick. My amazement of APRS has most assuredly gotten more people at least interested in it, if not experimenting with the mode theirself.

>
> > That really should tell us how twisted this has all become.
>
> Not without "effort" on the part of those who couldn't care less
> about whether or not CW survives.
>

What about those who don't care less, but who would never stand in the way of its existence? I don't care one way or the other if CW survives. However, I would never discourage someone from learning something new.

People like you, Little Dick, are prone to be extreme in your approaches; you are extremists. It's either black or white, they're either with you or against you, either love or hate--no in between. You seem to enjoy believing that there are evil, nasty, wicked people out there who LOVE to snarl at CW and anyone who uses it. When, all it really boils down to is that those people whom you think are snarling at CW are really snarling at your insistence upon their characterization.

Here's a scenario for you to think about:

I don't care one way or the other if ham radio survives...how's that? If ham radio goes away, I'd probably get more involved with the Red Cross, REACT, who knows? I may even decide to start tackling this damned black gumbo soil again to get some gardening into it. My motivation for ham radio is pure enjoyment, and an excuse to be on the road during a storm. If you

want me on your side--and to expend some energy to keep ham radio alive--then you'd better change your attitude a little. To me, ham radio seems to provide you nothing but some kind of soap box to stand upon and look down your nose at other people. I'm not the slightest bit interested in providing you that venue.

End of scenario.

Have you, or Larry, or Dave Heil, or anyone like that ever even considered that there are people who think like that scenario? If it is only in this newsgroup that you are brave enough to say and act the way you do--then we are blessed. Because if you are out acting like that on the air, and in clubs, and to the public, then you are the killer of your beloved ham radio. It's just like driving away the one you love because of raging jealousy.

Think about it...if you are acting "out there" like you do in here; you are killing ham radio, Little Dick. As much, if not more, than you say I am. I am at least darned friendly.

That's a fact, one which should elicit a mental response something
like "So the FCC at some time in the past created band segments by mode
for US hams, obviously for some good reason." Evidently
that went right over your head.

So, is it that testing creates the enviroment of encouragement to learn and
use CW?! This is getting really confusing, Little Dick. It sounds more
like you wish to force CW on people. Is that right?

Having CW as a phase of testing does not do anything one way or the other
for whether someone is going to use it or not.

DICK,
That is simply not always true. There are many times when
"the voice modes have faded into unintelligible mush, and
RTTY, Packet and PSK31 are printing gibberish,"
and NOTHING, not even CW can then be copied.

> -that
> is, if the operator has bothered to learn it!

That is IF there is ANY signal there at all.

> It'll be weak but intelligible!

It MAY be there, BUT it can also be true that even
the CW signal may be so weak that no one can copy it...
much less even know it is there.

Tell us... if you believe what you say...to wit:
"When the voice modes have faded into unintelligible mush, and
RTTY, Packet and PSK31 are printing gibberish, CW can still be copied"

... and you believe that is ALWAYS the case...then for how long
after "the voice modes have faded into unintelligible mush, and
RTTY, Packet and PSK31 are printing gibberish" do you
expect CW will still "get through"?

> One may have to use his skill as an operator
> to adjust his receiver to provide adequate copy, but for some length of
> time, as the band continues to fade out, CW will indeed
> "Get through" after the other modes have dropped out - failed.

And you seriously believe that will always be the case?

> Surely your vast experience as an engineer and a longtime ham has
> included this ordinary but definitive experience.

Actually, my experiance has shown that there are more than
unique cases when fading is sofast that NOTHING gets through.
Your clinging to Always isn't supported by reality.

Cheers,
Bill K2UNK

Here we go again ... from his absurd question, it is ABUNDANTY
obvious that Dick equates passing a test for a higher class of
license as a "graduation certificate" of sorts ... and that, to Dick
that is the ONLY way to demonstrate one's accomplishments
and capabilities.

How pathetic!

of
> conditions allow CW to *still* be copied.

And what might the shortest duration of that "short period"
be in your opinion/experiance? It can be milleseconds which
offers no opportunity for continued CW ops. I note also
that you have dropped the reference to digital modes
becoming jibberish. Looks like you are trying to open the
window of possible "CW gets through".

> That is and has always been the case.

That MAY be the case...perhaps even on many occasions, BUT
it is not ALWAYS the case.

> You and Stupid may stuff your alleged

>
> BINGO. If it's about the TEST, attack the TEST.
> >

And, in what way should the TEST be attacked, if not to say that:

a) having a test for CW does nothing for proving technical merit

b) having a test for CW at the exclusion of other modes seems to point that
CW is a most important mode

c) testing for CW seems to be used as a way to keep out the "less" desirable

d) any other number of reasons for which one does not support CW testing?

In what way should it be argued, Jim? Everything above, *IS* about the
TEST. It is the reaction to the statement about the TEST and turning it
into a statement about the MODE that is ridiculous.

>
> The very name "No-Code International" implies anticode, not antitest. Had
you
> folks chosen simply "No Code Test" or "No Code Test Association" (NCTA) it

> would be unambiguous.
>

Even from the first time I saw that name, I had no confusion about the implication. I pretty much knew when I saw that name that it meant there was a group out there whose objective was to eliminate CW testing. But then, I'm also not prone to believing there are people who would discourage someone from learning something.

> > Regardless, CW does still have its
> >niche and, if properly promoted by those that truly like it, there
> >will always be a niche of CW users/enthusiasts.
>
> Hopefully. But only IF there is a place for us to go.

As the future becomes the past, I am near certain there will be modes far superior to CW. It seems that we can nearly guarantee ourselves that. The government, as far as I know, has never really been in the business of providing something just because of tradition. While it would be wonderful to think that there would always and forever more be a portion of spectrum for CW, do you think the government should make that a focus in its decisions for bandplans? What if bandwidth becomes so critical that a mode such as CW is at risk, for the preference of modes we haven't even thought of yet that may make even better use of spectrum? Should the government be in the business of preserving a portion for a mode, because of tradition? Unfortunately I don't.

But, I always hope there are places for CW on the spectrum.

> >
> >> > It is not up to the ARRL or the FCC, either, to give credence to any

> input and see what the FCC and ARRL positions are.
>

I still say it is up to the FCC to provide the best use of spectrum, regardless of convenience for ham radio, or traditions. If, for example, some part of 10M was goig to be used for some miraculous medical contraption that would help a person walk, through radio control say, then my radio gets turned off, packed up and I yield to the higher need for spectrum. I would be disappointed in a government that says we can't let the medical people have it because our ham radio operators have it.

That's extreme, because there's lots to play with right now...well, sort of, but you get what I mean.

> >
> >There is a clear and compelling reason to keep FM out of

>
> What are those reasons? If they exist, then the same or similar reasons
apply
> to keeping voice modes out of the CW/digital subbands.
>

I wholeheartedly agree. I agree with allowing room for CW/digital subbands. I'd even go so far as to support absolute law (not just "bandplan"). Bandplan schmandplan--put some meat in to the matter. If we've got the room to play with, the spectrum to divide, etc., then do it.

>
> Once code testing is eliminated, are bandplans the next target?
>
> 73 de Jim, N2EY

I can't tell there if that is a policy question to NCI in general, or just a general question. However, my answer would be that there is probably always going to be something going on that changes what we "know today" as ham radio.

We have not done so at all. Nothing in NCI's comments to
the FCC argue for ending USE of the mode by anyone. Indeed,

we clearly state that USE is and should be a personal decision.

> >> It most certainly is up to both. That's why there's both FCC-enforced

>
> That's a fact, one which should elicit a mental response something
> like "So the FCC at some time in the past created band segments by
mode
> for US hams, obviously for some good reason."

Not necessarily ... as an example, the CW test speed used to
be 10 wpm ... at one point, the ARRL asked the FCC to increase
the speed to 12.5 wpm ... SPECIFICALLY to limit the number of
hams "because the bands were too crowded." (at the time, the
total number of hams was a SMALL fraction of those now licensed,
so the argument was, on its face, absurd ...)

The FCC felt that 12.5 wpm was an "awkward" speed to test
for, so they rounded it up to 13 wpm ...

Was this decision made "for good reason" ??? Given that
it's been proven that our bands can support FAR more hams
than the small fraction of today's population, then licensed,
the underlying argument of "overcrowding" was invalid, therefore
the decision to increase the code test speed to artificially limit
the population was flawed.

Note that this goes back MANY years and does not reflect
in any way on the current FCC's ability to make rational
public policy decisions.

Why does NCI owe you a forum?

>You do not want opposing opinion.

Bull...you are free to start your own web pages, email campaign, snail
mail or whatever. NCI has NEVER stated any opposition to you

or anyone else marketing counter ideas. IF, however, you believe
NCI should provide you with that forum, then that is simply
a totally naive expectation.

> The very name "No-Code International" implies anticode, not antitest. Had

We have actually discussed that veryy point...the bottom line
is that the costs to us as an organization to change the name don't
warrant doing it.

> > Regardless, CW does still have its
> >niche and, if properly promoted by those that truly like it, there
> >will always be a niche of CW users/enthusiasts.
>
> Hopefully. But only IF there is a place for us to go.

Has ANYONE suggested you shouldn't have a place to go.
Currently CW is allowed everywhere in amateur HF bands.

> >> > It is not up to the ARRL or the FCC, either, to give credence to any

Maybe maybe not. FM is far wider in spectrum usage than SSB.
Canada doesn't seem to have a problem.

> >Indeed, the same is true for
> >commercial FM. Other than that, in most countries,
> >there are no or minimal mode specific HF bandplanes.
>
> Let's see a list, complete with amateur populations.

Last I checked, HF radio didn't respect any international
boundaries.

> Once code testing is eliminated, are bandplans the next target?

Not from me. I don't really care one way or the other
about bandplans.

Cheers,
Bill K2UNK

Who expects that? The mission for code devotees will
be to "recruit" newcomers by showing them the benefits
that you claim...or, more marketable, the fundamental
enjoyment which need not be based on anything other
than undefined interests. I don't have a clue why I enjoy
working on antique cars but have ZERO interest in playing golf.
The same can be said for may users/non-users of morse.

For the very reason that there are people that take up all
soorts of things on a voluntary basis. The issue, if any,
between my expectation and yours is on just how much
"many" will be.

> > > Why in the world would they?

> of that time, yer dreamin'.

No dream at all...it is YOUR dream that you want "all" those
busy folks to be mandated to follow a skill development
path just to augment the roles of CW devotees.

> > That really should tell us how twisted this has all become.
>
> Not without "effort" on the part of those who couldn't care less
> about whether or not CW survives.

Your mission, Dick, is for YOU to be a part of those that care
enough about whether CW survives. IMHO, you ain't
cutting the mustard on that objective.

As for those that may have not a care at all about CW surviving,
that is their personal option...always has been, always will be.

Did the FCC acknowledge the argument that people
"just didn't have the time" in their R&O in response to
NPRM 98-143? Effort alone was neither viewed as
being a plus or minus.

Look at the statement. It's right there on their first page. The statement
attempts to portray the mode in a negative light - inaccurately, to boot.
How can that not be a discouragement?

Look at K2UNK's response. He's now attacking mode-specific bandplans, and
he's an NCI director. Where does this train lead to?

> Who in the world would ever discourage someone else from learning
> anything?

People with an agenda.

> I don't think we're about to start relying on wagon trains any more,

Problem is, CW is much more popular in the ham bands than running wagon
trains is in the world of transportation. Heck, just try to find some
unoccupied bandwidth this weekend. Sorry, it's not an adequate comparasion.

> the other for whether someone is going to use it or not.

Actually Kim, I think that is incorrect. I am sure there
are people that come to like CW simply because they were
forced to learn it to pass the test. That is exactly why Dick
wants to keep tests. If testing ends, there is NO automatic
recruitment to the ranks of CW users simly as a result of
the mandatory skill test. If testing ends, the automatic
recruitment (however small) of some hams to the ranks
of CW users will end and folks like Dick, Larry, et al
will need to become champions/recruiters/marketeers
tof CW use to bring newcomers to the mode...although I
am also certain some people will try it without any
prodding and of those, some will like it, use it and become
long term devotees of CW.

Cheers,
Bill K2UNK

What does being an NCI director have to do with
non-code related issues?

As to "attacking" bandplans...that's your exaggeration.
I point out a few realities of bandplans (lack of same) in
most countries and you take that as an attack?
If the issue of bandplans comes up at all in the FCC,
odds are you won't see any pro or con comments from
me on the subject. It isn't one of my hot buttons.

> > Who in the world would ever discourage someone else from learning

So what's the beef?
IF CW is being used as much as
you say, just what else do you want?

Sorry, the FCC makes the decision, the ARRL is free to
recommend to the FCC.
The ARRL doesn't get to directly provide or withhold spectrum.

Cheers,
Bill K2UNK

Well, with an attack on the mode itself on the front page of the NCI
website and now with both a Director and the Executive Director of NCI
attacking FCC subbands (with the ever-convincing argument that "oh, but
there's other countries that don't have regulated subbands!"), it certainly
looks like you're trying to push CW out of the way.

The ARRL, if memory serves, decided not to take a position on code testing
and the ITU, which is rather different than taking a position on it. As far

as CW testing and a "healthy future" for the ARS, that's certainly a
discouragement against code testing, not CW itself.

>> Who wants to use (following NCI's logic, such as it is) an

> Someone who thinks its interesting and fun?

Sure. "Interesting" and "fun" are not the words that pop up in my mind when
I read that "Manual radiotelegraphy communications has been superceded by
more modern, reliable, accurate, faster and efficient means of
communication."

I really find this problem with FCC and ARRL subbands within the
Directorship of the NCI pretty noteworthy as an indication that they don't
plan to stop with morse testing.

> The 30m band is only 50 kHz wide ... it makes sense

It is, however, a statement on giving "credence to any mode over another,"
which was the point that I was addressing,

No, I did *not* provide arguments against the NCI statements about CW being
superceded in the previous post.

I don't confuse between people attacking testing and people attacking the
mode, which I thought was fairly evident when I pointed out a specifically
anti-mode statement from NCI. I see obvious merits both for and against
code testing, and I certainly don't desire to end all CW use.

What I do see, however, is a strong anti-mode bias within NCI, and when
they say that there's not, I call them on it.

Look again at the front page of the NCI website.

>> If you're arguing against the use of mode-specific bandplans,
>> mandatory or otherwise, I don't think you'll have much company.
>
> "Much company" isn't the reason someone should enter into a debate

> about something one way or the other.

"Much company" most certainly is the reason why there's an FCC requirement to abide by "good amateur practice," why the FCC encourages self-policing, and why amateurs tend to try to do what's best for the ARS.

But, given your callsign, I can see why you might think otherwise.

Source record: 34048

Having read this entire thread, I can certainly see why Steve, K4YZ, is interjecting with his call
from time to time. It sounds to me like the club in question has too many grouchy old "buzzard"
ops with too much time on their hands. As I read the reg., it states that the control op must be
present, and the guest can operate the station with pretty much the same guidelines as the control op. But, again, as long as the control op is physically present.

I've run into some of those grouchy old 'buzzards" myself--one of whom took it upon himself to
correct me on-air about the way I signed off the club auto-patch. The way I did it was to pound the patch down, and then announce "This is K4KWH clearing autopatch after 3rd party
traffic with Bill Jones". This way, I didn't have the dial tone going while trying to talk over it. This ancient club member chided me and "instructed" me on the "proper" way to do it. I was
nice about it, and said no more. Then one night, I witnessed an accident where a car was forced off the street by another motorist. I broke into the net in progress and asked for the
patch to report the incident (property damage, but I didn't yet know if anyone was hurt). Per-
mission was immediately granted by the NCS, and I brought up the patch to call the cops to report the incident. The old "buzzard"--same guy who corrected me before--promptly dropped the patch out from under me and began to lecture me and the net that what I had was
not emergency traffic and did not warrant the use of the patch. (How th' hell did HE know what I had just witnessed?) This infuriated me. Heck, by the time we got it straightened out,
the guy that caused the accident was long gone. I sent word to Buzzard that from that moment
on, he was to mind his own beeswax and leave me strictly alone, or I'd kick his butt up around
his shoulders. (Hey, I lost my temper, OK? because he seemed to have this "thing" about me,
and I was tired of his alligator mouth> LOL!) Anyway, things cooled down, he never corrected me again, and I saw him at a hamfest back in the fall, and he was just as nice as he could be to me! I've had this happen before where someone becomes mouthy, bossy, and takes every opportunity to embarrass. With some of them, it takes a little bit of threat to make 'em quit it.

So, after getting a bit off topic here, I would say that if I am operating my station within the law

and somebody reports me for "illegal" operation, they had better be able to back up what they
report. I wouldn't take kindly to having to answer a letter from RH based on some buzzard who interprets the regulations HIS way, and if 'them 'ere young whippersnappers don't do it the
way we did it in 1950, I'll turn 'im in!" LOL!

The point was, if you check back, that NCI had made statements discouraging
people from using CW. If you're going to say that you don't discourage code
use, then don't make statements discouraging code use.

It's obvious what NCI's agenda is - I mean, I can read. :). The people *in*
NCI, well, I think it's clear that a portion of the membership has a
definite bias against the CW mode, not just the test.

>> Problem is, CW is much more popular in the ham bands than running

I'd want people with access to HF bands to be familiar and conversant with
the predominant modes used there. I think the Russian federation's
statement is pretty much in line with what I think about keeping a code
requirement.

Stating the facts supporting the contention that there is no
longer a justification for Morse proficiency tests in order to get
a license with HF privileges is NOT an attack on the mode
itself ... it is merely an attack on the TESTING requirement.

You neglect to mention the parts of the "NCI Mission Statement"
where we stress the fact that we are NOT against the USE of
Morse ... only the test requirement.

> and now with both a Director and the Executive Director of NCI
> attacking FCC subbands (with the ever-convincing argument that "oh,
but
> there's other countries that don't have regulated subbands!"),
```

The issue of mode-restricted sub-bands was raised by
someone else ... I don't recall who first brought it up. Larry,
a staunch PCTA sort of guy, stated that he was against
phone band expansion ... if you'll check, you'll find that I
agreed with him.

As far as mentioning that other countries don't have the
same sort of sub-band mode restrictions that we have in
the US (and that it doesn't seem to have caused a problem),
goes, that is simply a matter of fact.

I'll be operating next week from another country where there
are no such restrictions ... will I operate SSB in the US
Extra CW sub-band? NO. Could I do so perfectly legally?
Yes, but I have no intention of doing so ...
Neither do "the locals" where I'm going do so ... that's the
point ... there isn't a problem in that regard.

< it certainly
> looks like you're trying to push CW out of the way.

I don't see how you could honestly see that ... CW is
allowed on EVERY frequency in the HF bands ... the
only mode with such broad allocations under US rules.
NCI has specifically and publicly stated (and I have
personally as well) that there is NO intention of seeking
any sort of ban or restriction on the USE of Morse.

Can you explain how this translates into "trying to push
CW out of the way" ??? Sorry, it "doesn't compute."

[snip]

The ARRL *WROTE* the IWG-6/WAC US Draft Proposal on
Agenda Item 1.7.1 for WRC-03 ... and the contents included
the elimination of the Morse testing requirement of S25.5
from the ITU Radio Regulations. (my comment above
was directed at ITU Radio Regulations requirements ...)

So far, at least, the ARRL has stated that it supports a
continuation of the 5 wpm Morse test for General and Extra
in the US rules ... NCI, of course, has a different postion

on that, but that is a matter which won't be decided until
after WRC-03.

> As far as CW testing and a "healthy future" for the ARS,
> that's certainly a discouragement against code testing,

AGREED ... NCI is against code TESTING requirements,
NOT against code USAGE.

Your assertion is TOTALLY false. Again, we have publicly
stated ... from the very beginning until this day ... that there
is NO "hidden agenda" to "eliminate or restrict Morse usage."

All that the above discussion of sub-bands involves is that ...
discussion of the FACTS as they exist, both in the US and
in other regulatory domains. Don't read more into it than
is there ...

> > The 30m band is only 50 kHz wide ... it makes sense

I don't see the facts of the 30m band as "giving credence"
to ANYTHING other than the fact that that particular band
is too narrow to reasonably support wideband modes.
(Note that Morse is NOT the only mode permitted there ...)

If I take those words at their face, you have just said that if Morse/CW has merits, then new hams will not choose to learn it.

New hams are going to learn other things in ham radio that have merits, none of which have FCC testing for priveleges. Why do you feel Morse code's merits are so inferior that no one will learn it?

It is funny, in a sad sort of way. You and Carl agree that Morse code does not have enough merits that hams will want to make much use of it on the bands. The only difference in your positions is that he believes that the lack of merit of Morse code should mean that it should not longer be required via a code test. You believe that Morse code does not have enough merits that people will want to use it so they should be tested for it.

The ARRL emergency communications courses have been wildly successful. I don't think they would have if the opening line were, "Dear Knuckle Dragger..."

We all have our own style that really does shape our reality.

Source record: 34210

I was around when the arrl screwed ham radio in the 60's with
it's so-called "incentive" licencing program...

I was here when they backpeddled in the late 70's because school
clubs were evaporating because of lack of interest...

I was here when they heavy-petitioned the FCC to publish the exam question
pools for the -->SOLE PURPOSE<-- of putting Dick Bash out of business
and NOT because they wanted to make getting a licence any easier...

(Dick Bash crossed the line and took 50% of the arrl publishing business
you see..I can recall one person after an ARRL board meeting repeating
over and over: "..How dare he print those guides without our approval !")

I am still here an watching hamfests dissapear because nobody new is buying
those *obscenely overpriced * recycled plastic & steel Jap radios...

I am still here and THOROUGHLY ENJOYING watching arrl shrivel up
and die on the vine... (having my "I told you so" strawberry shortcake
and coffee - pfhbltttt!)

Bottom line, for the past 35+ Years arrl has taken a typical New England
uppity snobbish country club mentality and attitude about ham radio.
"Were' right and your wrong...."

Guess what sport's fans ----->> S C R E W E M !

Let them and their precious obsolete ham radio go
down the RF toilet. They made it that way, now let
it go to pieces like Enron did.

Your 100% right Clay/N4AOX

I would just add to you comments: "Good riddence to them
and their stupid museum(s) which they dumped thouand
into, the contents of which should have been loaded into
the back of a trash truck and carted to the nearest
Waste Management Inc. landfill..."

Ed,

Please forgive me ... I *know* I should just let this lie, but I just
can't help taking the opportunity to wish you well ... in answer
to your question to Dick: "You should live so long." (until
Dick stops insulting me ... or anyone else who disagrees with
him, for that matter ...)

Besides, being caucasian, I don't understand why Dick seems
intent on making an issue of "pigment" ... AFAIK, the Morse
issue has nothing to do with color at all.

> anti-mode statement from NCI.
>

You didn't do that either. I have just revisted http://www.nocode.org/ and
see nothing of which you speak. I see that NCI states that it is "a
organization dedicated to the abolition of the Morse code testing
requirement as a prerequisite for any class of Amateur Radio license." I
don't think it could be any more clearly stated than that, Joshua. It is
the *TESTING* requirement that is NCI's focus.

>
> I see obvious merits both for and against

Then, you're simply wrong. I don't think I've ever seen anything out of NCI
that should lead a logical thinking person to believe that their agenda is
against all CW--use, learning, expermimenting with, etc.

>

Tsk, tsk, so adamant and challenging! One would think N2EY is
"concerned!" :-)

Suggestion: Try and independent website opposing the NCI (several
ISPs offer plenty of webspace free as part of membership).

Non-suggestion: "No SSB International" has already been done.
Another fella named May or July or something like that did one,
too. Not there anymore as I understand.

By all means, BE AGGRESSIVE on the subject and FORBID those
NOT IN amateur radio to EVER discuss anything about GETTING IN;
always bring out the standard boilerplate phrasing, even borrow some
("Try it, you'll like it!"). Convince others that whatever your particular
personal desires are should be "representative" of the entire ARS.

If someone says a generality about something YOU like,
IMMEDIATELY jump in and point out their "obvious shortcomings,"
"they know NOTHING about the ARS," "they are dumbed-down,"
"unworthy of a license for wrong attitude" and similar phrases.
Those seem to be very popular. Obviously those folks ARE

ignorant, stupid, unworthy, etc., etc., etc.

>I have. But one cannot post to NCI's website. You do not want opposing
>opinion.

One could NOT post to "No SSB International." One could not
post to the other website that was very pro code in all respects.
Nobody can post publicly to the ARRL website unless they are a
member. Privately, yes, and expect form-letter replies. :-)

>The very name "No-Code International" implies anticode, not antitest. Had you
>folks chosen simply "No Code Test" or "No Code Test Association" (NCTA) it
>would be unambiguous.

The name American Radio RELAY League is unambiguous and implies
that ordinary folks still use telegrams. :-)

An example of an unambiguous name is Radio Club of America. It was
founded in 1909 on a general interest in radio, not as a poor-man's
Western Union substitute.

>> Regardless, CW does still have its
>>niche and, if properly promoted by those that truly like it, there
>>will always be a niche of CW users/enthusiasts.
>
>Hopefully. But only IF there is a place for us to go.

I hear tell of a group that loves to send code messages over the
Internet to one another. Imagine the high-tech state-of-the-art
of that...using personal computers, modems running 56 K BPS
to send high-speed morse code at 40 WPM with worldwide
access and no propagation problems! :-)

"CW gets through when nothing else will!!!" :-) :-) :-)

<snip>

>>Indeed, the same is true for
>>commercial FM. Other than that, in most countries,
>>there are no or minimal mode specific HF bandplanes.
>
>Let's see a list, complete with amateur populations.

YEAH!!! LET'S SEE THAT LIST!!! [you tellum, Jimmie M]

>Once code testing is eliminated, are bandplans the next target?

Getting worried? Afraid that the State Welfare programs for
Morsemen will be eliminated?

It's been suggested that the sound of "black helicopters" in the
distance is a symptom of tinitus, a common malady of older
folks. It can happen with younger folks, too, especially those
who hear a lot of loud beeping. See your ornithologist for a
checkup regularly, don't flap around imagining a future that will

never fly.

Remember: Time flies like the wind but fruit flies like bananas.

I'm not offended, just irritated, especially so when I see
standard-boilerplate "political" phrasing. Don't forget that
some of us have been in existance for a while and heard
a LOT of variations on "political" phraseology.

As far as this CITIZEN is concerned, the FCC website is
quite complete, accessible. Like all sites, civil or government,
their search engines cannot read minds or divine thoughts to
it is up to the user to input search criteria...with experience
that becomes easier. I cannot, under any circumstances or
with/without experience access information that is NOT THERE.
Nobody can.

>If the minutes say I was "on a phone bridge" that means I was

I'm not interested in every attendee's work load or work committment
in regards to governmental public policy and SUPPOSEDLY public
information being available...including that of the ARRL reps. Like
everyone else, I cast as many doubts on "insider views" (where they
know "the real story") as those on the outside who "know all about
inside government" when they've never been there but have a secret
telepathic ability.

IWG-6 seems to have the lightest workload in terms of agenda items
and "issues and concerns" except for the 23-year-old "40 m occupancy"
issue. Please do NOT tell me that agenda items 1.7.2 and 1.7.3 are
of earth-shaking importance and require months of "study"...those
could have been wrapped up in two meetings, done before June 2001.

>The RCS preliminary view is something different from the FCC
>WAC preliminary view ... different parts of the govt. develop their
>own preliminary views, which may differ slightly from each other.
>Then those have to be resolved to mutual agreement through
>what amounts to a "conference committee." Remember, this
>is the govt. ... nothing is as simple as it might be had you or I
>designed the process ... but that's the way the process is.

Those who are PART of "the process" seem to make it grander
and "harder" than it is. Well, if "that is the govt" then pray tell,
how come for why OTHER issues before the FCC, national and
international, get prompt attention in detail, rather excrutiating

detail with footnotes and are AVAILABLE TO THE PUBLIC?

Let's take an example from the OET's page on spectrum useage
below 28000 KHz. [long-timers will identify there because they've
never ventured much into never-never-land "gigasquirt" space above
30 MHz] That's a big document, a mere week old on release, and
DIRECTLY pertaining to WRC-03 issues on HF-and-below radio
spectrum use...even if it is primarily of domestic concern and
assignments. [read the footnotes and some paragraphs to see the
relationship to ITU-R documents] That's comprehensive and detailed.

On IWG-6 meetings, attendees attended, approved, tabled, as if
EVERYONE WAS ON A PHONE BRIDGE. The ONLY time that
any details are given is when some OUTSIDE statement is cut and
pasted and that is RARE. There has been, supposedly, a 10th
meeting scheduled for 24 January 2002 with the "draft minutes"
supposedly written on 17 January 2002 (?) according to the IWG-6
page and there was NO released minutes text available as of 11
PM Pacific on the 15th of February, 2002.

>> The Preliminary Draft, DA 01-2168, 17 September 2001, mentions
>> ONLY 1.7.2, 1.7.3 out of the three for 1.7, absolutely NO mention
>> of 1.7.1.
>
>I know ... I explained below that there were some questions
>or confusion about something that had not yet been resolved,
>but my understanding is that the matter should be resolved
>shortly (perhaps was resolved this past week ....)

"Shortly" is a non-quantative ambiguous word. WRC is scheduled
for the year 2003. The OTHER IWGs seem to be ready with
something...judging by THEIR minutes, "P.V.s" and whatnot.

>The ARRL has, as I understand it, 3 people in its Washington
>office ... Walt, Paul Rinaldo, and Johnathan Siverling ... with
>all of the IWG-s and other WRC preparation, plus things like
>the SAVI RFID proposal which threatens interference in the
>70 cm band, plus all the other things they need to follow, they
>ARE *VERY* busy folks ... I see Walt at several other meetings
>which I regularly attend in Washington ... and I believe that Walt
>and Paul each spend something on the order of 3-4 MONTHS
>per year in Geneva (in the aggregate), attending meetings there.

Okay, so you are an apologist for the ARRL. No problem. Not
accepted either.

Anyone who is "too busy" to do their "assignments" CANNOT
DO THEM PROPERLY. "My dog ate my homework assignment"
was never an acceptible excuse in school and similar "excuses"
here are on the same order. If the ARRL can't hack it or think the
issue "isn't important" then why in the hell are they there on this
IWG?

Let's face historical fact here. The ARRL has, for years, pushed
morsemanship as the highest (even most noble) attribute of
amateur radio. Denial of that is bullshit, plain, pithy and simple.
Those ARRL "representatives" were raised early on that lore.
Walt Ireland is listed as "scribe" of IWG-6. He is of the ARRL.
IWG-6 scribe minutes seem to have been LATE, way late,
scantily reported. This 3rd Revision of agenda item 1.7.1 is still
not publicly available as were the 2nd and 1st versions. Put them
all together and they spell S-T-O-N-E-W-A-L-L-I-N-G to me.

Stonewalling an issue looks like granite but has a faint odor
of brimstone about it.

>Yes, as I said, I'd like to see IWG-6 minutes produced more
>promptly, but I know from personal experience with my own

Awwww...shall I punch his TS card? Shall I punch your card?

Do NOT try to patronize anyone. Been there, done that, have
far too many t-shirts.

>Should the ARRL increase its staff in
>Washington? Perhaps, if they can raise enough $$$ to fund
>such an expansion.

...and next you would have us believe that Imlay and company
in DC work everything for the ARRL pro bono?!? Surrrre...tell me
another...

>However, in the meantime, they have to
>do the best they can with the resources they have in place.

Yeah, sure, and one way to "resolve" agenda item 1.7.1 is to
do as little as possible now, wait as long as possible, and then
if S25.5 isn't changed, take all the credit to make themselves
look good to the membership (less than a 1/4 of all licensed
US amateurs)...or if S25.5 IS changed, take all the credit to
make themselves look good to the membership as if they were
"really for the ARS and the future."

Does that phrasing sound familiar? It should...been done a lot.

>> Okay, I'll bite, WHERE THE HELL IS IT? All I see is the 3rd draft
>> proposal IWG-6/049(Rev.3) listed and its not available to the public.
>
>I'm not sure I'm remembering correctly, but I *think* that a copy

>inter-governmental issues had been worked out. (speculation on my part)

Well, then somebody can come along and quote the document in
here, make themselves Very Important in proving that doubters are
stupid, ignorant, dumbed-down, and all those gratuitous pejoratives.
:-)

Strange, but I don't have much trouble getting very detailed documents
on OTHER things in radio regulation from the FCC. Of course, I'm not
an "insider" and not a professional legal beagle so, like the general
public, I am not "qualified" to access the inner working of gubmint.

>- From what I know, the PCTAs will not be deleriously happy ...
>I have no control over what is posted publicly, what is not,
>or when it gets posted.

YOU are NOT being charged with anything, Carl.

Keep up apologizing for some obviously PCTA-siding organizations
and I'm sure the rest of us can think up some "charges." :-)

>Nothing more that the delays that are not unusual in large
>bureaucracies ...

Really?!? Again, I find it "strange" that OTHER radio regulatory
subjects are handled fairly quickly...except for the "important"
Vanity callsign stuff for amateur radio.

I have complete sympathy and understanding of delays resulting
from the 9-11 Attack on America and the Anthrax mail-poisoning.
That disrupted a lot of DC agencies. This issue surrounding agenda
item 1.7.1 and the 23-year-old "40 m issue" has its controversial
roots LONG AGO in radio regulation. There is NO EXCUSE for some
of the delays. Even if one cannot see stonewalling, the brimstone
odor is a dead giveaway.

>I'm sorry that you're offended in some way at not being as
>aware of what happened as those who acually participated
>in the process.

I'm not offended. I've heard a lot of "insider" stories telling about
"what really happened," all of them "true" even when two insider
stories contradicted themselves. THAT is par for the course.

What I don't accept - and what every concerned citizen should not
accept - is tardiness, omissions, and general appearance of doing
things which are "best for us" by special interest groups. From
most of the documents from the FCC done be FCC staff, I do NOT
see much of that, not even when decisions, R&Os, etc. go against
my personal interests. The FCC's reasons are posted for everyone
to see, in detail, including commenters on NPRMs. Those are
publicly available. The goings-on at the inner sanctums of the
Informal Working Groups are largely composed of SIGs yet the
other IWGs seem to have public information on what went on in
those. Maybe its my fault for not being an "insider," ain't it?

>I guess it's just another case of the wheels
>of govt. moving slowly ... but I have no reason to believe that
>there is any "funny business" going on, or that the final outcome
>will be "pro-code."

Neither PCTAs nor NCTAs have any independent public information
on what the US administration is or will be on WRC agenda item
1.7.1...us in the public can only speculate based on public information
on the "40 m issue" from FCC-02-27A1. Speculation on that, and it
is only speculation, is that the FCC and NTIA seem to support the
retention of the amateur 40 m band as it is today, the SW BC folks
move up in the spectrum. Morsemen have a ray of hope for their
declining years...:-)

With all due regards,
a concerned citizen of the USA

Hmmm. Must be a LOT of that alleged "stupidity" and "lack of experience"
going on in the rest of the radio world, even as far back as 1948 in the
U.S. military (all HF long-haul comms going TTY). Too bad that the rest
of the radio world hasn't kept the superiority of CW...

I just love it when calm, seasoned, civil, technical replies eminate
from a radio expert in Missouri. Wonder when we will see such...?

With all kindest regards,
a veteran

I'm not so sure, Bill. I don't think it is the test that attracts people to ham radio :) I think it is the ham radio operators. And, if the new hams around here are any indication of people who actually like and use CW, then the mode is quite safe...with or without testing requirements...

However, we shall see, right? :)

Only if it is sufficiently different from existing code.

More important, it can be copyrighted, which means it's in the same class as a work of fiction rather than engineering innovations, which are patented. One does not "design" a song or novel.

>> > The same applies to hardware.
>>
>> Nope. By that definiton, almost nobody designs computers today, because

A nice little integration of two pieces of manufactured gear. There is a
commercially
available "tune mode adapter" for the IC-706, btw, but I don't think it's
specifically
for the HS-1600.

>
> If I take those words at their face, you have just said that if
Morse/CW has
> merits, then new hams will not choose to learn it.

Dick seems to often confuse things ... I think he simply doesn't
have enough confidence in the merits of Morse as a mode to
believe that, absent a government mandate, many people will
bother to learn it (at least not to his satisfaction in terms of how
well they can manually encode/decode it ...)

> New hams are going to learn other things in ham radio that
> have merits, none of which have FCC testing for priveleges.
> Why do you feel Morse code's merits are so inferior that no
> one will learn it?

Good luck in getting an answer ... Cecil has been asking Dick
that for ages and never has gotten a straight answer.

> It is funny, in a sad sort of way. You and Carl agree that Morse
> code does not have enough merits that hams will want to make
> much use of it on the bands.

Actually I *personally* don't feel it has enough merit for ME to
bother with it (though I learned it many years ago when it was
required). As far as others feelings as to whether it's worth
learning or not, that's their business as far as I'm concerned.
While I'm committed to not seeking any ban or restriction on
the use of Morse by those who voluntarily choose to use it,
I frankly don't give a damn if anyone *does* choose to learn
and use it or not. Seriously ... I'm not AGAINST anyone learning
it if they want to and I'm not against anyone using it ... I just
don't give a damn either way ... preserving Morse is not a
"religious issue" to me as it seems to be to Dick and Larry
and some others. The way I see it is, if they want to preserve

it, they'd better promote it ... but as you so aptly point out,
their insults and holier-than-thou attitude towards potential
"converts" is not very good "missionary" practice.

> The only difference in your positions is that he believes that
> the lack of merit of Morse code should mean that it should
> not longer be required via a code test.

It's not even a question for me of "lack of merit" of Morse,
as a mode ... it's more that NO mode has enough merit
to deserve a separate pass/fail barrier to entry test in today's
world when there are so many modes to choose from.

> You believe that Morse code does not have enough merits
> that people will want to use it so they should be tested for it.

That's the difference ... I don't care/mind if people want to
learn/use Morse ... that should be THEIR choice. Dick, on
the other hand wants to force his "religion" on everyone,
whether they like it or not. I say, let him get his converts,
if he can, through good old missionary work, not by
maintaining a "state religion."

Having been a director since the inception of NCI, I can
state catagorically that no one in NCI has ever suggested

that CW should be ended as a mode. The fact that
some directors may not like CW as a mode doesn't imply
anti-USE.

> >> Problem is, CW is much more popular in the ham bands than running

But even 30m allows other modes. There are ONLY two
actual exclusive morse subbands...both are VHF.

Cheers,
Bill K2UNK

to
> ham radio :)

Agree completely. All I am saying is that there are some
people who, because they had to learn morse, will find they
like it. Would those same people have gravitated to morse
without a test...some may have, others probably not.
THAT is why Larry, Dick and a few others want code
testing. The current scenario means they don't have to do anything
because there's always a few code enthusiasts that pop up via the
mandatory test process.

> I think it is the ham radio operators. And, if the new hams
> around here are any indication of people who actually like and use CW,
then

As I've said before, there will be some that try code
just to see how it goes. Maybe not as many as with mandatory
testing, but some to be sure.

> However, we shall see, right? :)

Probably within 18 months or so.

Cheers,
Bill K2UNK

That's true. The applicable regulations are in RIC-2, found at

http://strategis.ic.gc.ca/SSG/sf01226e.html

Short and sweet is good.

Note, however, that in most countries where the subbands aren't
written into law the effect of the voluntary plans is still pretty
much indistiguishable from the former; some modes get used some places

in the band while other modes get used other places, with relatively few exceptions. That Americans see a big distinction between the two ways of arriving at these divisions is probably why they end up with the FCC micro-managing mode usage and band divisions within the service.

>
>Not necessarily ... as an example, the CW test speed used to
>be 10 wpm ...

Hold it right there. Tell the WHOLE story.

The code test speed for US licenses (except the old Extra) was 10 wpm from
1919 to 1936.

>at one point, the ARRL asked the FCC to increase
>the speed to 12.5 wpm ...

That's right - in 1936. TheyALSO asked the FCC to revise the WRITTEN exam
so that it required more radio knowledge in order to pass.

> SPECIFICALLY to limit the number of
>hams "because the bands were too crowded."

Incorrect.

The concerns were:

1) the POPULAR bands of the day were overcrowded
2) many newcomers were getting on the air with insufficient skill AND TECHNICAL
KNOWLEDGE for the conditions of the day
3) the explosive growth (the number of US hams TRIPLED from 1929's ~16,000 in
less than 5 years)
4) high turnover (as many as 40% of hams not renewing, at a time when the
license term
was 3 years
5) increasing numbers of TECHNICAL violations (out of band, harmonics, hum,

chirps, etc.)
wreaking havoc on other services and threatening the reputation of the ARS.
Many of these
violations were the result of inexperienceand a "don't care" attitude.

The solution proposed by the ARRL leadership and accepted by the FCC was a
slight rise in the
code test speed AND new written tests. Funny how the written test changes are
forgotten.

>(at the time, the
>total number of hams was a SMALL fraction of those now licensed,
>so the argument was, on its face, absurd ...)

Incorrect again. Carl, do you know what the amateur bands were in 1936? Do you
know how
they were used? Do you know what the typical amateur station equipment was like
in those
days? Or how many hours/week a typical amateur was on the air?

The argument was NOT "absurd" once all the FACTS are known.

>The FCC felt that 12.5 wpm was an "awkward" speed to test
>for, so they rounded it up to 13 wpm ...

Yup. And it stayed there for just 15 years - 4 of which were WW2. Then 5 wpm
was added.
>
>Was this decision made "for good reason" ???

They thought so at the time - both the FCC and the ARRL. Are you saying the FCC
made a bad
decision back then?

>Given that
>it's been proven that our bands can support FAR more hams
>than the small fraction of today's population, then licensed,
>the underlying argument of "overcrowding" was invalid, therefore
>the decision to increase the code test speed to artificially limit
>the population was flawed.

Incorrect. It all depends on the methods used and how much a typical ham
operates. These things change over time.

Do some math using realistic-for-1936 and show us what ya got.

>Note that this goes back MANY years and does not reflect
>in any way on the current FCC's ability to make rational
>public policy decisions.

In toehr words, if you agree with them, the decisions are rational, but
if you don't, they are irrational.

Yeah, I read about that, it's pretty neat. But I see no relationship to
any of the computerized CW copying programs used on HF.

Of course there's Coherent Cw too, Still a different subject.

I think that once you get outside of the code-testing arena, there is probably a wide range of opinion on any particular topic to be found on the NCI BOD.

Their statements in the past is that once code testing is eliminated, there will no longer be a need for the organization. To my knowledge, that hasn't changed.

Well, as soon as my DSP-10 is built, and a transverter designed (and yes, I will probably cobble it together with some cookbook circuits, just to get Cecil going again), that software WILL be a CW copying program used on HF. :-)

I have done W1-W6 QSOs with about 10 milliwatts. If I can get 40 dB out of the technique, I could do a W1-W6 QSO with 1 microwatt. That would be a hoot. :-) The real challenge will be in dealing with the sometimes wildly varying propagation delay changes and phase shifts. I hope to learn something by trying, succeed or fail.

Now, in fairness to your original contention, the technique requires several hours of transmission and long-term integration, but it is well past the ability of human decoding. I think we have just scratched the surface on this, and extending it past OOK CW to other modulation methods and encoding should get other improvements, too.

The LOWFers are doing some similar work with QRSS CW, too.

>definite bias against the CW mode, not just the test.

Joshua, I'm NOT a member of NCI nor of the ARRL and my license is commercial, not non-commercial (amateur). *I* am not in favor of OOK CW for either use or testing requirements. NCI rejected me for membership despite actually operating (legally) HF transmitters 49 years ago...and having since operated on more parts of the EM spectrum than are allocated to amateurs, with more different modes than are allocated to US amateurs...plus having BOTH formal training and work experience plus self-study as an electronics engineer (yes, legal title, other readers don't start that silly discussion again) doing radio and electronics design work. However, I am supportive and encourage the viewpoint of the NCI membership and their goals...and I do NOT have anything against OTHERS using OOK CW for personal enjoyment wherever allocated in any radio service.

What I am personally against - and that is shared opinion among thousands worldwide - is that morse code mode skill is NOT a "necessary" or "vital" requirement for any federal administration's regulatory task in determining whether or not an applicant should be licensed in any amateur radio service. In the USA, the FCC has the same viewpoint, has held that same viewpoint for a dozen years by public statements, but is constrained by international agreement (ITU-R S25.5) to require morse code testing for amateur licenses having below-30-MHz privileges.

In the last half century a strong mythos has developed among radio amateurs and the radio amateur press that morse code skill is "vital," "necessary" and other associated adjectival evidence

favoring morse code modes. If anyone wished to analyze this objectively the morsemen can be categorized approximately as belonging to certain groupings:

1. They are able to communicate by simple, on-off keying and at high rates due to an aptitude that is NOT shared among the general population. Those wish to maintain a venue to practice that skill among "their own kind." It makes them exclusive and gives them a feeling of eliteness, of being "better than ordinary." Preservation of "their" special environment is essential to them.

2. They were "impressed" by the general amateur-only environment as teen-agers and by elder radio amateurs who were good at OOK CW. This sort of impressing leaves an emotional bias that is carried on through life, of retention of the status quo when they were young. Such impressing is not overcome by advances in technology or of finding out that the rest of the radio world does not agree with their own personal knowledge or desires. Indeed, some of those are overtly resentful that changes have occurred in the state of the radio technical arts.

3. Some have adopted a STRICT PROTOCOL ETHOS in which every-thing in operating has unbreakable methods, jargon, procedures, even message forms (!) which are "official" as endorsed by the largest membership organization. That is the territorial imperative emotional needs manifesting itself with a high dose of regimentation. To "violate turf" is to encourage hostility, resentment, and cries of "We don't DO that in ham radio!" For them "everybody must have fun their way whether or not anyone else likes it." THEY have proclaimed themselves the "leaders" who "show the proper way." Ex-military are typical there.

4. A minor group is composed of Believers whose life is oriented totally around their avocation. They tend to remain rooted in the past for "keeping the traditions (forever)" and imagining that they are of some vital "service to the nation." The word "service" throughout Part 97 is a regulatory term denoting a type and kind of radio being regulated; it is not used in the alternate sense of being of "service to a nation." Some psychologists call that an "emotional anchor" to a stable environmental condition. Some have delusions of fantasy and heroism in an imaginary world, a psychological "shield" from frustrations and danger in reality.

5. One unfortunate minority is the outright self-aggrandizing egotist who would either mold an entire avocational activity around their personal desires or simply proclaim themselves as superior, using their own skills or abilities as the ultimate criterion, lesser beings being (of course) "inferior."

6. An unfortunate majority who have no psychological aberration are simply ignorant of the rest of the radio world, probably because their occupations do not involve the radio arts or details of

communications of any kind. This is largely a fault traceable to the amateur radio publications' scant coverage of that huge area; members are assumed to be "more comfortable" staying solely within the arts and crafts that "have always been" in ham radio. The average non-radio-occupation ham seems to only see the "other radio world" as domestic broadcasting, cell phones, sat comms and CB radio (usually prefixed by pejoratives). The morseman is generally frustrated, angry, or resentful (perhaps all three) that the rest of the radio world has: (A) Never considered morse code as a useful mode in a radio service and never used it; (B) Replaced morse methods with more useful, robust, faster, more reliable data modes. The only holdout in the rest of the world for morsemanship is maritime radio and morse modes are fast disappearing there. The Global Marine Distress and Safety System (GMDSS) relies on the Inmarsat and automatically works with GPSS, operable by any on the bridges for sending both distress and position information immediately.

>>> Problem is, CW is much more popular in the ham bands than running
>>> wagon trains is in the world of transportation. Heck, just try to
>>> find some unoccupied bandwidth this weekend. Sorry, it's not an
>>> adequate comparasion.

The fact that many ALREADY do something and have done so is not necessarily attributable to some mode's "superiority" nor is it a criterion for "proving viability" or efficacy of a mode. Most of the present-day morsemen have been ham radio hobbyists for more than a decade or two and favor that particular mode. Most of them, by their own admission, got into the hobby as teen-agers. As such, they have emotional ties to the mode that aren't correlateable to morse modes being technically "superior" to any other...although the emotions seem to run so high in some that they do amazing rationalization in trying to prove such a "technical superiority."

Government radio regulations that are set or changed today will have their greatest effect on the many that are NOT now in amateur radio. Those already licensed do not have to live in fear that their privileges will be revoked. "Grandfathering" is an established tradition in FCC regulations among all radio services.

One of the conditions of being human is that we are all MORTAL. Everyone. No exceptions. As such everyone can expect to see more and more people coming into existance and older folks leaving this existance. Regulations are made with an eye to the future, not just the past. One of the unfortunate attributes of humans in regards to avocations is that they are quite selfish in desiring conditions to remain static in whatever they enjoy. Quite often such an attitude towards future hobbyists is the pithy "screw you, I've got mine!" or the ever-popular "the way I did it is what you have to do too!" without an adequate explanation of WHY that had to be so.

A federal regulatory agency's license is NOT an academic achievement or even a "skill" award. It is simply a way that the regulatory agency

can use as a tool of regulation. Those who need credentials, certificates, and evidenciary "proof" of their being better than others will dispute this; they usually need many other things, too, such as titles having "authority" to them. They use titles and credentials as a rationalization of their opinions' "greater worth." :-)

Way back in the 1930s (prehistory to some, I was born in 1932), to be a skilled morseman in radio was a positive attribute, a marker of value among communicators. As radio and electronics technology leap-frogged ahead, making it available to the general public, those markers lost their luster and had less and less meaning. By the start of this new millennium the skills of a morseman are simply quaint, ancient, something of a bygone era that is no longer. Radio has CHANGED. Some opinions have not, nor do their holders wish to change.

CHANGE is unstable, it is new, it must be learned, it must be accepted. It is also threatening and may wipe out all those certificates and skills that some held so dear, so precious, so very-very important. It is inevitable. The best way to survive is to plan for it, meet it head-on and accept it, be one with the new.

For all the rest who cannot change, feel free to send me your TS card. I'll get out my new TS punch, turn my collar around, and punch it. :-) Have a nice day.

4731. Bootleg Call signs

You just heard Carl and Bill imply that the US is an odd bird since we have
- gasp! - bandplans. And I saw one at least one NCI member comment against
RM-10352 (a petition for rulemaking for a 160m bandplan), throwing in anti-
code sentiment to boot.

>> "Much company" most certainly is the reason why there's an FCC

Okey dokey - how about your recent statement that you don't care whether
the ARS lives or dies? Is that doing what's best for the ARS?

Surely is. I took a code element and a took a written test that covered
AMTOR, RTTY, SSB, SSTV, etc.

> Indeed, once licensed, there is absolutely NO reason that you can
> cite to for your "want."

Sure, people can lapse or let their knowledge go into disuse (like I'm
seriously thinking of using Baudot code, but I digress), but hey, they
showed that they had the knowledge at one time. What ya gonna do, test
folks again?

>> I think the Russian federation's
>> statement is pretty much in line with what I think about keeping a
>> code requirement.
>
> How come the Russianns don't expect everyone to
> be conversant in Russian? Latin American countries
> in Spanish? Its the same concept.

Not exactly - the same concept is that everyone is conversant on voice
modes (SSB, AM, FM, etc.).

However, I should modify my comment above. While I do certainly believe
that code testing is a good thing, I also do see what folks who don't want
code tests are saying: it's obvious that we need to maintain the health of
the ARS by bringing more people in. The Foundation license in Great Britian
is an interesting way to deal with the problem, and maybe it'd be a good
compromise. There's a few kinks - experimentation not being allowed is
rather silly, for instance - but I think it's worth studying to see where
it goes.

Sounds like a plan. Dick, let us know when you get through to Europe with
CW on 160m at high noon. No other mode gets through to Europe on 160m
at high noon. CW gets through when no other mode will. Seems simple
enough to prove you are right.

If it is written from scratch and is not some trivial algorithm, it will
be new and unique. Every piece of software at Intel is copyrighted.

> >You have misunderstood the concept. A new chip is a new design.
>
> By your own definitions, that's not true unless it involves a new technology.

Nope, most new chips are logically different from the older designs. A
chip *designer* designs the new layout.

> A nice little integration of two pieces of manufactured gear. There is a
> commercially available "tune mode adapter" for the IC-706, btw, but I don't

I suspect all screwdrivers operate essentially the same way. My design
does what I want it to do. The commercially available designs do not
do what I want done. My tuning process is accomplished without touching
the IC-706. I used it all day today. It works like a champ.

I had access to all ham frequencies as a Conditional in 1952 - only
ever used the Novice frequencies, though - XTALs, you know.

Giving Carl the old brush-off? Tsk, tsk.

I know something about brushes and pigment as a credentialed and work-experienced artist-illustrator. What I see there is an _airbrush_, little micro-sprayer thingy that blows a lot of air with very thinned pigment in a teeny container. [not talking about Carl there]

Hello? That's the criterion N2EY was using for a long while, labeling current statistical interpretations "correct" versus others' interpretations (invariably) as "wrong".

Gotta love it when a "criterion" is "right" when used and "wrong" when another is claimed as doing so.

Er, this year is 2002. 1936 was, um, 63 years ago. Three generations ago, a big world war just igniting (it was in all the papers I remember while beginning to read).

Why don't you go ALL the way back to 1836? Nice time, no radio, no morse telegraph, a tabula rasa to begin the discussion? :-)

Thanks anyway; and, by the way, I hope you get at chance to read the March QST "moved and seconded" and annual meeting highlights section. There, I think you will see that:

1. The buzzards are circling to pick at the dead carcass of the novice bands, thus fulfilling the final steps of the NCT agenda supporters.(P.61 "Novice Band Refarming Plan").

2. The Newington Crowd is consolidating further their strangle hold on the ARRL by prohibiting any initiatives or creativity by the field organizations.(p.60, 1st.col.)

3. Not all things are cut and dried in the board meetings, because of the allowance of 11th hour "Director's proposals" on the agenda (see Minute 66). Bodson and Milne proposed moved and seconded to promote "data emissions in the MF/HF bands where phone emissions are authorized"

Boy, we are sure going to be better off not seeing these "near misses" published in QST anymore. We can only hope that data is allowed everywhere in the phone bands soon. ;-).

The only good thing about the BoD vote to suspend printing
the minutes is that the vote was not unanimous. It may have
been close, one or two directors difference maybe. Where
does a member find the director vote report? Maybe this
decision could be reversed.

As to whether the commentary on the meeting or the meeting
minutes are more valuable, pick up a March QST and see for
yourself. The commentary does not show the near miss
proposal of "data in the phone bands".

> If I take those words at their face,

Surely you're not so unconscious as to take Cecil's words -any of them- at face value.

If you believe what he says then Morse/CW has no merits based on the fact that so many of
newer hams "refuse" to learn it to a useful level of skill. As you know, the minimal 5wpm reqiured as the maximum tested speed is not useful speed. For anyone who uses the 5wpm on the air regularly skill quickly improves well beyond the 5wp. I believe it to be accurate based on several factors that few newcomers are spending the time to do it. What other realistic
conclusion can be drawn when so many of the untrained consider it to be a "hazing ritual"?
Should we just assume that because it's no longer on the test that now they will embrace it?
Really? Are you lucid today? Evidently not, if you believe that.

Shows what you know. 160 fades long before noon, and when it starts
to fade, CW will fade to the level of unusability AFTER
the other common modes. And you will troll on, and on, and on,
ad naseum.

Why are YOU a dumbshit? Especially when you bill yourself a genuis.....
It *has never been used*, much less widely used, on HF.

>be unwise depending on how popular the digital modes become. "Wideband"
>digital modes such as packet radio are giving way to more spectrally
>efficient modes such as PSK31.

The way it works on many HF bands is this:

The CW folks hang out at the bottom of the band, the digital folks above them,
then the non-US 'phones, and finally the US 'phone band begins. That's a
simplified version, but fairly accurate.

If the US 'phone bands are widened, the non-US 'phones will move down to avoid
the US
QRM (US hams are allowed more power than most of the rest of the world, too).
Then the
digital folks move down to avoid the foreign 'phones, and the CW folks get
squeezed even
more.

In any scenario, the narrowband/spectrum efficent folks (digital and CW) get
squeezed
out to allow a few more wide band voice QSOs.

> > Would you say the same thing about the technical parts of the written

>to use premanufactured equipment with wideband output circiutry.

It was never critical to understand a pi-network - one could always use a
conventional
link-coupled tank. Most of what is on the written exams today is not critical
unless a
ham wants to use that particular mode or technology.
>
> > I agree - but only if it is popularized actively.

>even if S25 is struck next year.

Maybe. But it is up to Morse enthusiasts to "sell" the mode, just like the
packet
and PSK31 folks have done.

Let me be clear - I still think Morse testing should be required for any
amateur
license. If anything, the arguments I've read against the test have only made
Morse testing appear more necessary, not less.

But it's clear that the FCC and it's counterparts don't think that way. It's
clear to
anyone with an open mind that the chances of S25.5 surviving WRC 2003 are
"slim to none". Even if there is ANY support for it, there probably won't be
anywhere near enough votes to keep it alive. And once S25.5 goes, FCC will
drop the codetest hot potato ASAP.

The thing to focus on it what the license structure should be without S25.5

> >>After all,
> >>SKYWARN, ARES, and RACES manage to survive without the "aid" of being
> >>mandatory for license privileges.

> > Those activities do not require the acquisition of a new skill.

>Oh, really?

Yes, really. Most people know how to talk and listen already.

>Then why are emergency simulation drills held so
>frequently? Why is traffic handling repeatedly practiced. Please don't
>imply these activities require no new skills. To do so takes away from
>the time and effort hams perform in public service.

Let me clarify:

They do not require a new skill be acquired before you can begin participating.

Sorry Josh...but of your examples, only the code test
stood on its own as a separate pass/fail. You could
have just as well ignored the AMTOR, RTTY, SSB, SSTV
questions and still passed the test. None of the other
modes (AMTOR....SSB) have their own "must pass" test
element.

> > Indeed, once licensed, there is absolutely NO reason that you can

The bottom line is still a lack of any requirement to
engage in any "universal" mode/language/etc.

> However, I should modify my comment above. While I do certainly believe

Not all people that oppose code tests do so because they
expect "more people" to become hams. I have always
taken the position that the code tests are simply no
longer justified today...regardless of any prospective
increase in new hams.

> KF6WXJ

Is it (1) illegal to impersonate a ham...or is it
(2) illegal for a ham to be an extra or advanced and not know
code?

The answer to #1 is, no...unless they impersonate
"on the air".

The answer to #2 is NO since there is absolutely no
requirement for any ham to retain their code ability
once they have passed the code test.

By the way...how have you determined they don't know
code by way of email contacts?

Cheers,

Amateur Radio Newsline Report 1279 – February 15, 2002

Amateur Radio Newsline report number 1279 with a release date of
Friday, February 15th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio helps in the face of a California wildfire and an appeals court says that pirate broadcasters cannot be banned from getting FCC licenses. These stories are first on Amateur Radio Newsline report number 1279 coming your war right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAMS AID AT FALLBROOK CA. FIRE

Ham radio was on the scene as a wind-whipped fire raced through the remote north-western portion of Fallbrook California on Sunday February 10th. Sixteen homes were destroyed along with one sheriff's vehicle and two fire trucks. Among the houses that suffered damage was that of Grammy winner Rita Coolidge. An estimate 2600 acres were burned as this report is being prepared. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--
According to Bob Gonsett, W6VR, Amateur radio operators were more than ready when the emergency the emergency hit. And so was their local repeater system:

--
W6VR: “We have two repeater systems that are tied together on Red Mountain that serve Fallbrook and Fallbrook is fortunately a hotbed of Amateur Radio activity. Lots of logistics communications took place in support of Red Cross activities, animal evacuations, people evacuations and it was a very, very busy repeater system which, incidentally, is backed up by emergency power.”

--

Gonsett, who is editor of the CGC Communicator broadcast industry newsletter says that hams were posted at key points in the community. This included the fire department, the sheriffs department, the hospital and the evacuation centers. Some hams provided mobile communications for animal rescue operations. Others, who specialize in evacuation matters and health and welfare traffic worked in conjunction with the American Red Cross to provide support. W6VR says that it was just about a textbook ham radio communications effort for both people and equipment.

--
W6VR: “Their performance was outstanding in every respect. The repeaters worked flawlessly. There was no jamming. The greater community pulled together on this one.”
--

Volunteers came from across the region. Bill and Wayne Dewey, WD6AHW and WD6AHX, served as the Net Control operators. A father and son team, the Dewey’s spent hours directing all radio communications on the Fallbrook Amateur Radio Club's repeaters. Another ham volunteer was Jess Mauk, KD6YEI, of San Diego. He manned a RACES van sent in from San Diego County. In all close to thirty radio amateurs served in the first wave of volunteer communicators. Gonsett says that hams were there because they wanted to help:

--
W6VR: “It was really heartwarming to find such an outpouring of devotion from the ham community in people coming up here and making their presence known and contributing as they could. They were all useful and the community leaders thanked us repeatedly for our roles.”
--

Most communications took place over the Fallbrook Amateur Radio Club’s dual redundancy repeater system This is actually two separate machines designed and built by Chris Durso, AA4CD. One outputs on 146.175 MHz and the other on 445.600 MHz. Both carry the same audio. In time of emergency anyone with a scanner radio in the Fallbrook and Temecula California area can tune to either frequency and hear all of the ham radio communications.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

One last note. According to Gonsett, one of the luckiest hams on Earth has to be Joel Brown, KE6FHS. Brown is the president of the Fallbrook Amateur Radio Club. His home survived the wildfire. Sadly, his immediate neighbor’s' house burned to the ground. (ARNewsline(tm), W6VR)

**

RADIO LAW: COURT THROWS OUR PIRATE RADIO LICENSING BAN

Just because a person one operated a pirate radio station is not enough reason for the FCC to ban him from ever getting a broadcasting permit. So says a Washington D.C. Federal Appeals court. Amateur Radio Newsline’s Paul Courson, WA3VJB, reports from the nations capitol:

--

The government is not allowed to use your past as a bootleg radio operator to block you from holding a legitimate broadcast license, according to a ruling from a federal appeals court February 8th.

But any victory might be short-lived for onetime pirate operators wanting to turn legit.

The case out of Washington DC involved Greg Ruggiero, a onetime bootleg radio station operator around New York. He challenged an FCC rule that bans those found guilty of pirate broadcasting from ever holding a license, or being formally associated with the recently-created low-power radio station service, an industry that has become known as FM microbroadcasting.

The appeals court agreed with Ruggiero's claim such a ban is unconstitutional as the law is now written. But the court also left open the possibility Congress could write a more narrow law in line with the First and Fifth Amendments. Part of the argument centered on a protest philosophy held by many unauthorized microbroadcasters, who see their bootleg ops as civil disobedience.

The appeals court, siding with the former bootlegger, said there was some evidence Congress, in writing the ban into broadcast law, meant to punish those with a protest message, without really improving future compliance with the law. They called it viewpoint discrimination, and said ... not allowed.

Communications law experts are mixed whether the ruling has implications beyond FM low-power broadcast licensing, including whether FCC can use violations in one service to administer broader punishment.

Traditionally, the FCC has kept open the option of revoking other licenses held by a violator, beyond the service where the violation took place. For example, someone in violation on the ham bands might have his commercial radiotelephone license pulled as well.

In Washington, Paul Courson, WA3VJB, reporting for the Amateur Radio Newsline.

--

And what might this decision mean to Amateur Radio? Especially those cases where ham licenses are challenged based on character issues. According to retired ARRL President George Wilson, W4OYI, probably very little. George, who is also an attorney, says that despite the ruling, the FCC still has the authority on a case by case basis to deny a license to a pirate broadcaster. They can also still designate for hearing the license of any station who breaks the law or violates government rules. (Published news reports)

**

RADIO LAW: FOIA BECOMING MORE DIFFICULT

Hams fighting the FCC over enforcement and other issues are finding it a lot more difficult to obtain government records under the Freedom of Information Act. This is because of an administration policy change made a month after the September 11th terrorist attacks. That’s when Attorney General John Ashcroft directed all agency leaders to be more cautious in releasing records.

Over the years, some hams who have been tagged with violations by the FCC have tried to use the federal Freedom of Information Act to try to get a line on their accusers. Most of the time the government refuses unless the person making the request can show good reason for the information to be released.

While not of a national security nature, none the less, bureaus like the FCC will most likely be heading the words of Attorney General John Ashcroft who says that agencies must carefully consider things including the effectiveness of law enforcement before releasing any documents. Ashcroft says that agencies that legitimately turn down requests made under the Freedom of Information Act will have the backing of the Justice Department in doing so. (Published news reports)

**

RAIN PROMO: HOW MANY HAMS ARE THERE IN THE USA?

I'm Greg Sperling, KB9DBC.

Just how many hams are there in the United States?

As you heard last week here on Amateur Radio Newsline, the picture is not a rosy one. You can hear Bill Pasternak, WA6ITF, interview with W5YI publisher and VEC Fred Maia this week on the RAIN Report. It is accessible in both Windows Media and RealAudio at www.rainreport.com and for the technologically challenged by telephone at 847-827-7246. (RAIN)

**

Break 1

From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the Three Rivers Amateur Radio Club repeater serving Philadelphia Pennsylvania.

ENFORCEMENT: LOS ANGELES AREA PAROLED RADIO OPERATOR RE-ASSERTED FOR PROBATION VIOLATION

A Bell California man on parole for jamming police communications is now being held without bail for violating his probation and allegedly making death threats on the 2 meter band. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details.

--
You may remember that back on November 14, 2001, the FCC set aside an Amateur Service license and the call sign KG6IRO that it had issued to one Jack Gerritson. That grant was made only a few days earlier on November 8th. The Commission took action after it received information that Gerritsen had been arrested in 1999 and convicted in 2000 for interference to the Los Angeles Police Department radio system.

Gerritsen was out on parole after serving one year of a five year prison term on that conviction. On January 29, Los Angeles FCC agents participated in the pre-dawn re-arrest of Gerritsen after authorities received complaints of death threats allegedly made by him on several Amateur frequencies.

As Gerritsen was on parole in the earlier case, a no-bail search and arrest warrant was served. This is because the terms of his probation banned him from possessing any kind of radio transmitting equipment.

But at the time he was taken into custody Gerritsen reportedly had over twenty radios at his premises. Of these the FCC says that eight were capable of operating on frequencies in the Amateur, Marine, Land Mobile and Public Safety bands. The FCC says that Gerritsen even had a Marine radio with batteries connected to it, and a length of antenna line running outside his residence hidden in a closet.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The FCC says that after they set aside Gerritsen license that he continued operating and causing deliberate interference to numerous Amateur radio repeaters in the Los Angeles area. It acted on these complaints. Now Gerritsen may spend the next four years in jail. (FCC release, other sources)

**

ENFORCEMENT: FCC ORDERS POWER COMPANY TO HELP A HAM

The FCC has told an Alabama power utility that it has to clear up interference it is causing to a local ham radio operator. Amateur Radio Newsline's David Black KB4KCH, has the latest from our South East Bureau in Birmingham:

--

For more than two and a half years, Dan Jeswald, W4NTI, says his ham radio communications have been hampered by a pesky problem: interference. Jeswald moved to Anniston, Alabama, in June, 1999. It wasn't long after that, he says, that he began experiencing interference on numerous high frequency bands. He says 6 meters became unusable because of popping sounds and other interference Jeswald says sometimes rates full scale on his equipment. He says the noise is worst during cold weather and sometimes goes on for days.

Jeswald suspected a faulty transformer or other power company equipment. He says he contacted Alabama Power. Jeswald says the power company responded and began working on the problem. But in midstream before the problems were eliminated, Jeswald says there was a change of people he dealt with at the power company. Jeswald says his efforts to get help with the problem since then
have gone nowhere.

With few options left, Jeswald contacted the ARRL, which put him in touch with the FCC. On January 30th, Special Counsel Riley Hollingsworth sent a letter to Alabama Power's Chief Executive Officer. In the letter, Hollingsworth advises the utility about Commission rules governing equipment that generates unintended interference. And he informs the company of its responsibility to fix the problem, or possibly face fines if a violation is found.

A call to the power company seeking comment was not returned. Meanwhile, Dan Jeswald just hopes the airwaves clear up--and soon.

From Birmingham, Alabama, David Black, KB4KCH, for the Amateur Radio Newsline.

--

Alabama Power was given thirty days to advise W4NTI as to what steps it was taking to solve the interference. (FCC release)

**

THE CHANGING OF THE GUARD: WAYNE WILLIAMS, K4MOB - S.K.

A radio amateur who dedicated almost a quarter of a century editing a ham radio magazine has crossed over to the other side of the Ethereal Abyss. This with word that Wayne Williams K4MOB, editor of the SouthEastern Repeater Association magazine "The SERA Repeater Journal" has passed away.

According to Gary Pearce, KN4AQ, Williams died at home early Tuesday morning, February 12th of complications from cancer. He was 65 years old.

Pearce says that Williams passion in Amateur Radio was FM and repeaters. He became active in SERA's predecessor, the Carolinas-Virginia Repeater Association, in the early 70's. This, at a time when two meter FM was just beginning to gain in popularity.

In 1977 Williams became the editor for the group's magazine, the Repeater Journal. The Journal was already a respectable size 44 page booklet, with regional advertising from local dealers and hamfests. But over the next 23 years, K4MOB built it into a quarterly magazine featuring full-color covers and both national and regional advertising.

--
Gary Pearce KN4AQ: “Through the Repeater Journal and through the coordination body Wayne helped to provide the infrastructure that we enjoy today on VHF and UHF FM. Repeaters that we can operate with a minimum of interference and maximum of range and quality of enjoyment.”
--

In parallel with his SERA activity, K4MOB also established Williams Radio. He started the business by amassing a huge inventory of crystals. In that pre-synthesizer era, two meter FM radios required a pair of crystals for each frequency used. Other crystal sources made hams wait days or weeks for delivery but Williams Radio was one of the few instant sources of crystals for almost every frequency, and for almost every radio. Later, the business added accessories and several lines of radios. It was a family affair, with Williams wife, brother and sons pitching in at hamfests across the region. K4MOB retired from Williams Radio in 1997.

Wayne Williams, K4MOB, is survived by his wife Gerry KB4SER, and two sons, Wayne Jr. and Chris. A third son, Greg, passed away in 2000. Pierce says that Wayne Williams was a very special man in ham radio. All that knew him say that he will be missed. (KN4AQ)

**

AWARDS: THE VITA WIRELESS SAMARITAN AWARDS

The Cellular Telecommunications and Internet Association along with the Cellular Telecommunications industry Association's Wireless Foundation have honored the winners of the 2001 VITA Wireless Samaritan Awards and the 2001 Wireless Industry Achievement Awards. Among the recipients are average citizens from Massachusetts, New Hampshire, Texas and South Dakota, who had the presence of mind to turn to their cellular telephones in emergency situations. The VITA Wireless Samaritan Awards are given annually to individuals from all 50 states, the District of Columbia, and Puerto Rico. (CTIA Release)

**

AWARDS: HAMAWARDS.COM

Hamawards.com is a new website that is currently under development. According to Anthony Farmer, KB3HGY, the mission of hamawards.com is to provide centralized on-line information regarding all awards that an Amateur Radio Operator can receive. The site is currently being developed. More information is at www.hamawards.com. (News release)

**

BREAK 2

Here when you need us 52 weeks a year. We are the Amateur Radio Newsline, with links to the world from our only official website at www.arnewsline.org.

**

HAM RADIO AT THE WINTER OLYMPICS: ANOTHER COMMEMORATIVE STATION

Yet another commemorative station is taking to the airwaves form near the site of the 2002 Winter Olympics. Linda Reeder, N7HVF, reports from Salt Lake City Utah.

--
Linda Reeder, N7HVF: "It will start on Friday February 22nd at 5 PM to the 24th. Our station call will be K7O on 80 through 10 meters. If you want a QSL send an self addressed stamped envelope to Mark Richardson, W7HPW, 11361 South 5825 West Payson Utah 84651-3622"
--

Again the call sign to listen for is K7O and QSL's with a SASE go to Mark Richardson, W7HPW, 11361 South 5825 West Payson Utah 84651-3622 (ARNewsline (tm), N7HVF)

**

CONVENTIONS: HAMVENTION 2002 BANQUET MASTER OF CEREMONIES NAMED
The Master of Ceremonies for the 2002 Dayton Hamvention Banquet will be Carl Nichols, N8WFQ. Nichols is the Chief Meteorologist for WDTN channel 2 News in Dayton. This is a forth return performance for Nichols who served as Hamvention banquet Master of Ceremonies since 1998. (DARA)

**

CONVENTIONS: WIA IN MELBOURNE IN MAY

The 2002 Federal Convention and Annual General Meeting of the Wireless Institute of Australia is now slated for the city of Melbourne on the 17th, 18th and 19th of May. Among the many subjects to be discussed at the meeting will be a possible restructuring of the WIA and the possibility of a Foundation class license similar to that recently introduced in the U-K. (WIA)

**
HAM RADIO IN SPACE: HAMS ASKED TO HELP NANOSAT PROJECT

Ham radio is being asked to provide technical support for an upcoming satellite project. Jeramy Boot, G4NJH, says it is a bird called Nanosat:

--

John Heath, G7HIA, the Secretary of the National Space Centre Amateur Radio Society, reports that Bristol University is asking the world-wide amateur radio community to assist with data capture from their forthcoming Nano Satellite Project.

Hand-launched from the Space Shuttle during a space walk, the 6.5-kilogram satellite will send data that can be decoded with software available free from their web site. The software is not yet written because the university wants to give amateurs the chance to have input into how they would like the data stream: 1200 baud AX25 packet, 9K6 packet, Bell 202, or Soundcard etc. More information and an on-line survey form is available on the web at www.handsat.co.uk

Jeramy Boot, G4NJH

--

If you missed that website address you can find it in the print edition of this weeks amateur Radio Newsline report. (GB2RS)

**

INTERNATIONAL - ENGLAND: QUEEN ELIZABETH’S 50TH ANNIVERSARY

Thanks to the efforts of the Radio Society of Great Britain, UK Amateur Radio operators will be taking part in a very special celebration. On Wednesday the 6th of February, England’s Queen Elizabeth marked the 50th anniversary of her accession to the royal throne. The Queen's Golden Jubilee will be celebrated next June, and the RSGB has negotiated the use of a special prefix for the celebration. Starting June 1st and continuing through the 30th, UK hams will be permitted use of the 'GQ' prefix to help commemorate the event. (GB2RS)

**

DX

In DX, E20NGF says over the Internet that there is now a new Worked All Thailand Provinces award. There are currently 76 in Thailand and this particular awards requires that you contact and confirm each one. And while E20NGF calls it a great challenge to all award chasers, he also notes that its

not all that difficult to log 20 provinces these days with more than 1000 Thai hams already on H-F. Check the various DX and awards websites for full information. (RSGB)

**

THAT FINAL ITEM: THE NEW ZEALAND AREC AWARD

And finally this week, New Zealand's team of Amateur Radio Emergency Communications volunteers has received an important award. Its a special honor in recognition of their providing support of Search and Rescue efforts down-under. Amateur Radio Newslines Jim Meachen ZL2BHF in Auckland has more:

--

The inaugural presentation of the New Zealand National Search and Rescue Award for the year 2001 was made to AREC at a ceremony held in Wellington earlier this month.

The Award recognizing AREC's outstanding performance and contribution to search and rescue in New Zealand was made by Marion Hobbs MP on behalf of the Government Minister of Transport. In presenting the Awards Marion Hobbs said of AREC:

--
Sound Here
--

Brian Purdie ZL2ADL the National Director of Amateur Radio Emergency Communications accepted the Award on behalf of the AREC team and thanked the New Zealand National Search and Rescue Committee for the award.

--
Sound Here
--

The National Director of New Zealand's Amateur Radio Emergency Communications Brian Purdie ZL2ADL. Further detail of the award ceremony with photographs can be found on the NZART web site at www.nzart.org.nz.

From Auckland New Zealand, I'm Jim Meachen ZL2BHF for Newsline.

--

By the way, ZL2BHF says that he will be a flying in from Kiwi Land to take part in this years Amateur Radio Newsline sponsored live Ham Radio Town Hall meeting. It takes place at the 2002 Dayton Hamvention at 1 p.m. Eastern time on Saturday, May 18th. (ZL2BHF)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio

Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, we want to mention that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year is now open. No significant changes from last year. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm _____ saying 73, and we thank you for listening. Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

In article <3c6ea0ad_1@news7.fast.net>, wa6vse-shack@fast.net says...

> Stating the facts supporting the contention that there is no
> longer a justification for Morse proficiency tests in order to get
> a license with HF privileges is NOT an attack on the mode
> itself ... it is merely an attack on the TESTING requirement.

When such "facts" are wishful thinking, and when such "facts" portray the
mode in a negative light, it is an attack on the mode.

> You neglect to mention the parts of the "NCI Mission Statement"
> where we stress the fact that we are NOT against the USE of
> Morse ... only the test requirement.

And you similarly neglect to mention that there are a number of NCI members
that most certainly are against the use of CW as it currently stands.

> As far as mentioning that other countries don't have the
> same sort of sub-band mode restrictions that we have in
> the US (and that it doesn't seem to have caused a problem),
> goes, that is simply a matter of fact.

[snip]

> Your assertion is TOTALLY false. Again, we have publicly
> stated ... from the very beginning until this day ... that there
> is NO "hidden agenda" to "eliminate or restrict Morse usage."
>
> All that the above discussion of sub-bands involves is that ...
> discussion of the FACTS as they exist, both in the US and
> in other regulatory domains. Don't read more into it than
> is there ...

Then what about this statement?

> The ONLY need for "mandatory bandplans" is to solidify the status
> quo of existing band usage and make it more difficult for folks to
> develop and introduce new modes.

And what on earth does this statement from a comment to the FCC on RM-
9259 by NCI have to do with code testing?

> NCI is concerned that if the FCC declares that the observance of
> band plans parallels "good amateur practice" the ARRL/IARU cartel
> will continue or adopt band plans which will further their narrow
> agenda. We further believe a case will be made that their version
> of amateur radio is the only one that should be authorized. This

> would place the FCC in the untenable position of having to enforce
> a flawed -- and we believe unenforceable -- concept.

If, as you said, NCI is only about getting rid of a testing requirement,
and, as you said, you're only stating facts from I shouldn't read
anything into, then how on earth do you explain this?

Again, the agenda is clear.

>does a member find the director vote report? Maybe this
>decision could be reversed.

Most often, the Board minutes do not show the voting record. In some cases, one of the Directors call for a roll-call vote, in which case the results appear in the minutes. If you want to know how your Director voted, you will have to ask. He may also share with you his impressions of how close the vote was. He will also gladly hear your views that you feel that the minutes should continue to be printed in QST.

>As to whether the commentary on the meeting or the meeting
>minutes are more valuable, pick up a March QST and see for
>yourself. The commentary does not show the near miss
>proposal of "data in the phone bands".

Data is not allowed in the phone/image bands. Digital voice is not allowed in the CW/data bands. The FCC rules are what prevail here.

However, you are correct; the commentary does not cover every single point in the minutes of the ARRL Board meetings. One has to download the minutes and read through them in all their exciting detail. :-)

Nice, try, though, Clay, but there really is no conspiracy here. Better luck next time!

"TraNSforMATionS MaLetoFeMAle" <doodadoodadoo@aol.com> writes:

>I was around when the arrl screwed ham radio in the 60's with
> it's so-called "incentive" licencing program...

It was the FCC's program, not the ARRL's. ARRL went along with it
for two reasons:

- a small majority of the membership favored it
- the FCC made it very clear that they were going to install some form of
incentive licensing program no matter what.

The FCC's proposals were actually far more draconian than what the ARRL
proposed. Example: FCC wanted to demote all Advanceds to General, then
institute a new "Amateur First Class" with 16 wpm code test and new written.

ARRL leadership knew they could either fight the FCC and lose all input to
the process, or work with it and moderate the effects.

>I was here when they backpeddled in the late 70's because school
> clubs were evaporating because of lack of interest...

Ever think that perhaps Vietnam, Woodstock, and the 60-70s youth
culture might have had an effect on amateur radio, which was
considered pretty "square" back then?

>I was here when they heavy-petitioned the FCC to publish the exam
>question pools for the -->SOLE PURPOSE<-- of putting Dick Bash out of
>business and NOT because they wanted to make getting a licence any easier...
>
> (Dick Bash crossed the line and took 50% of the arrl publishing
>business
> you see..I can recall one person after an ARRL board meeting =
>repeating
> over and over: "..How dare he print those guides without our approval =
>!")

In its 1975 restructuring proposal, FCC wanted ALL licenses to be available
via volunteer examiner. FCC offices would also do tests, but the trend was
clear.

The old ARRL License Manual "study guides" were simply the FCC study guides
reprinted with permission. They say so right in the LMs.
>
>I am still here an watching hamfests dissapear because nobody new is >buying
> those *obscenely overpriced * recycled plastic & steel Jap radios...

Sure they are - they just buy them via the Internet and 1-800 numbers.
>
>I am still here and THOROUGHLY ENJOYING watching arrl shrivel up
> and die on the vine... (having my "I told you so" strawberry =
>shortcake
> and coffee - pfhblttt!)

Think about who will look out for amateur radio without the ARRL. Will
any other organization go after Little LEOs, SAVI tags, or RF exposure
limits? How about PRB-1 and CC&Rs? Will other mags publish
Product Reviews that are as in-depth as those in QST? How about
RFI issues?

The enemies of amateur radio would just LOVE to see the ARRL
disappear.

Question:

Does the FCC require that people taking the US amateur radio
tests be conversant in English? I've never heard of any procedure
to allow non-English speakers to get the tests in anotheer language.

But CW does fade to unusability which proves your statement wrong.
After CW fades to unusability, the other modes do not get through.
But you say that, "CW gets through when the other modes do not
get through." Your statement is therefore, false.

Maybe it's the basis at the end you missed: "this would place the FCC in the untenable position of having to enforce a flawed -- and we believe unenforceable -- concept" Did you miss that part? I also abhor faulty legislation.

Kim:

I have a "Tuna Tin" QRP transmitter for 40-meters, made from the QST
article many years ago. Had it on-the-air many times while operating
as DA1RZ in Germany -- great fun making QRP QSO's with a home-
brewed rig. Gotta dig that thing out again sometime. I've also home-
brewed several non-transmitting projects, like an electronic
attenuator for DF'ing, iambic keyer, a couple of antenna-tuners
(which I sold at a hamfest in Colorado and wish I had back!), not to
mention numerous kit projects ranging from HW-8's to a repeater
control-link receiver. Suffice it to say, I've melted more than my
share of solder.

My on-air and in-person behavior is nothing like what you see in
this newsgroup. Here, I am subject to the same (false) sense of
security everyone else has, including yourself, while safely hiding
behind my keyboard. Of course, I have been known to publicly
demonstrate my unwillingness to suffer fools gladly, and that has
caused the typical reaction from whining, sniveling no-coders. I've
gained the respect of supporters, and the disdain of detractors,

but I've always had the courage of my convictions and a willingness
to speak the unvarnished truth whenever necessary. I am not on
this planet to win a popularity contest. As to who would take any
kind of class from me, there have been dozens for whom I've been
able to successfully teach the code, if they were willing to learn it --
and many more who gave up without putting in the effort required.
However, I always made it clear at the beginning that their success
or failure was entirely under their own control -- I can't beat the
code into them, and will not even try. All I can do is use time-
honored techniques to teach it, and the rest is up to them.

>there, eh?

That doesn't matter to me. If they want my services as an emergency
communicator, they can have them, as long as I'm given something
useful to do, and am not having the chair pulled out from under me
by some No-code Tech with a Ham Hero complex. I am not in it for
any kind of recognition; I'm there to serve, and give something back
to the hobby through the use of my skills as a radio operator. I have
nothing to prove, and nothing to lose.

>> Lots of
>> excuses are given, such as "the local officials want to be dealing

>Wow, yep. Sounds just like some of the arguments about RACES down here.
>You're describing local politics and poor leadership, Larry--NOT the state
>of emergency communication.

I'm describing conditions I've found while attempting to be an
"emergency" communicator in at least three stateside venues.
However, as I said, if they don't want to make use of my skills as
an experienced radio operator, then that's their loss, AFAIC. I don't
define myself as a person, or as a ham, by my ability to grab a
2-meter rig's microphone and talk into it. I can, however, move
large volumes of traffic very efficiently and effectively via digital
modes, a bit less so on CW, and just as well as anyone on voice.
If and when I'm ever in a position to do just that, I'll be able to get
the job done. And I'll probably be too busy at my rig and computer
to get my picture taken for the paper. That's what the guys with
the HT's are for.

>> When
>> hams show up for some "emergency communications" exercise, only

>your personality to even approach an emergency communication group that I
>had any leadership in, I'd do my level best to dissuade you from
>participation--you can be sure of that.

Which makes you the problem, not the solution. You'd be judging
my ability as an effective communicator on your singular, and
incorrect, assessment of my "personality," and not on my ability
to get the job done. Your willingness to discourage me due to my
"personality" only demonstrates that you are in it for personal glory
and group acceptance, not to get the job done.

>Again, the politics of emergency communication: people leading who can't or
>have no business doing so; people who are in the "hip pocket" of others;
>etc., are local and should not be considered to the "state of" emergency
>communication in ham radio. In fact, while those incestuous little groups
>are left alone to do there thing...there's often a lot of good work going on
>elsewhere.

Yes, and it's hams like me, willing to work quietly in the background,
without seeking the spotlight, who are doing that "good work." The
"ham hero" wannabes are the problem, not me. If being a "politician"
is necessary to send and receive message traffic, then I've yet to find
a way to incorporate that skill into the task at hand. If you have, then
God bless you and keep up the good work!

>Kim W5TIT

Kim:

Sez who? I think no part of the license testing regimen has any
possibility of keeping out potentially bad operators. Witness the
fact that most of the NAL's issued in recent years have gone to
20-WPM code-tested Amateur Extra-class licensees. Some of
the sloppiest CW operating I've ever witnessed on-the-air has been
inflicted on my by my fellow Extras. However, I'll still take that
over a life consigned to having the same old pointless QSO day-in
day-out on the local repeater with the rest of the codeless blunders.
Code testing only achieves one purpose -- getting hams involved
in *using* the Morse code. As in anything else, what they do once
they gain their operating privileges is going to vary from individual
to individual. I've never claimed that it was any kind of "lid filter,"
and I don't think anything else is, or could be. Lids are born,
not made.

Yeah, Josh, it's been clear for a LONG time. Stevenson, NCI Inc et al
have decided that their version of ham radio will be dictated to
ARRL, FCC, even IARU and ITU! Isn't it amazing?

Not to worry, Ed, I know all about my accomplishments, and something about
their lack of accomplishments in ham radio- yes,
in the area of licensing. Which should be the easy part. While you and
I and many,many of thousands of ordinary people just did what
the rules required to gain the top level of licensing these two
geniuses couldn't cut the mustard. So they keep the troll going in
a lame effort to compensate. We all know where they're coming from.

I don't see how traffic control can be seen as micromanaging. Without band segments there would be MANY more on-the-air conflicts that we don't see because of them. That has been true for all the years I've been a ham. Seems those who protest just want to do whatever they want wherever they want. That is the genesis of conflict and problems.

Nope. As long as there is a definite period of time when CW will get
through when other modes will not, the statement is true.

>
> After CW fades to unusability, the other modes do not get through.
>

As an engineer (even as an experienced ham)you can be held
responsible for knowing that there
are HF propagation characteristics which dictate that there are are
periods when there is NO propagation for any mode. Thus you can
be expected to accept without excess verbiage needed, that simple fact as
it relates to the instant conversation. Anything is is pure trollery on
your part, as per your usual, and you know it.

Troll, troll, troll. Doncha *ever* get tired of it???

Personal preference has in ice cream or anything else has
nothing to do with it.
It is rather a matter of ham radio operaters learning the basics of
radiocommunications. There IS NO more basic mode than radiotelegraphy

However, it's an interpretation shared by more than a few knowledgeable
folks, and backed up with some serious factual evidence, no less.

> How many ARRL members are there that agree with every mission/tenant of the
> ARRL? Oh, but that's OK, right, because it's the ARRL.

You betcha. The ARRL has a system where if you disagree with their
policy, you can work to change it. The NCI, on the other hand, purges
people who vary from their doctrine. Which is their right, of course, but
makes NCI a very different creature from the ARRL.

> Maybe it's the basis at the end you missed: "this would place the FCC in the
> untenable position of having to enforce a flawed -- and we believe
> unenforceable -- concept" Did you miss that part? I also abhor faulty
> legislation.

Faulty is in the eye of the beholder - but if you think it's faulty,
that's kosher. If Carl thinks it's faulty, ditto. When Carl and NCI say
that NCI's only position is to get rid of code testing and then NCI
comments on a rulemaking petition on something completely removed from
code testing, he is lying.

What's really not kosher? When NCI does the above then encourages members
to harass someone for making a comment for that same petition. That's
scurrilous, shameful, and very indicative of their mindset.

> No, I think your overreaction is clear.

Hey, I'm just as prone to overreaction as the next person, but here I
think that the facts do speak for themselves.

Let's try some other things...
How does Golf continue to gain new players?
How does the antique car hobby keep attracting new enthusiasts?
How does the local volunteer Red Cross, First Aid Squad,
Vol. Fire Dept., keep getting new members?
...the list goes on and on.

> It is rather a matter of ham radio operaters learning the
> basics of radiocommunications.

So why is it ONLY hams that should be so required?

What about the many radio communications professionals
who have never learned morse?

> There IS NO more basic mode than radiotelegraphy

So what? Knowledge in the mode in NO way inhibits
anyone from becoming a proficient ham. Indeed, IF the
basic aspect of morse was any sort of foundation knowledge,
then engineering schools would have required it for
part of the engineering syllabus. To my knowledge,
NO school EVER had such a requirement. I attended a
two year tech school and we built a 10 watt CW
transmitter when studying transmitter fundaments...but no
knowledge of morse was needed to build it or test it.

Cheers,

>KF6WXJ

Bill:

No, it's not illegal, it's just ham radio in the Post-Restructuring Era.
All that's required to get an Extra-class license these days is to
answer 70% of the questions correctly on a 10-question multiple-guess
test based on a 5 minute, 5 WPM code transmission, or producing
one minute of solid copy (which is about 25 characters). Once
the test is passed, any code knowledge gained to pass the test would
be quickly lost, if no further use of the code were pursued. Therefore,
it is entirely possible for any ham who has been licensed for a time
to no longer know the code, and most likely with new hams who
were licensed or upgraded to Extra since 4/15/2000.

>Cheers,
>Bill K2UNK

Bill:

Well, in a worst-case scenario, the obvious answer is zero -- although
I doubt that we'd see a total abolishment of on-the-air usage of CW in
my expected remaining lifetime. However, I don't think we'll see any
more growth in the numbers of CW operators -- just enough replacements
of dying-off old timers to maintain a stable plateau for a few more years --
then we'll see a decline, probably at a rate a bit shallower than the typical
bell curve. In any event, I doubt that we have half the number of CW
users 20 years from now that we have today. In the absence of a
code testing requirement, the WWII-generation old timer CW users will
be going SK at a rate that we won't ever be able to keep up with simply
by current CW afficianados "selling the mode" as it were.

Cecil:

Actually, I don't think it had anything to do with either. It seems to me to have had more to do with certain people adopting the "We got here first, the power, fame, and glory is all ours" attitude. Had it been a problem with my personality, I probably wouldn't have wanted to bother trying to get involved in emergency communications in the first place.

>73,
>Ed Hare, W1RFI

Ed:

I never said I have anything against digital voice. I believe in it, and hope the ARS adopts it very soon. There is more than enough phone spectrum available right now -- simply displace analog SSB with digital voice. Leave the non-voice segments alone for digital data and CW.

>feel would be very offputting to potential newcomers.

Ed:

Why should the TRUTH be "offputting?" Perhaps there are potential newcomers who are being put off by the existence of dumbed-down, technically uninclined and uninvolved hams, who were also the ones spending years of their lives whining and complaining about something as universally achievable as 5, 13, and 20 WPM code testing! Perhaps the "newcomers" don't want to be associated with such lazy and unmotivated seekers of instant gratification, and would appreciate an ARS where operating privilege was still linked to learning and growth in knowledge and skill. You have no right to criticize Dick for speaking the truth, considering the damage done to the ARS by the dumbing-process presided over by the ARRL.

>Why don't you settle the matter and send Carl an insultive email once and get
>it over with, then say things here that will be directed at helping to
>interest new people in ham radio and Morse code?

I've got a better idea, Ed -- instead of making outrageously inane and offensive suggestions, why don't you try to understand the point of view of those of us who disagree with the notion that we can save Amateur Radio by giving away full operating privileges to any passerby who may have a fleeting interest?

Yea, right. I suppose potential new golfers are similarly
"put off" by the existence of non-athletic, inept, duffers who
make no effort to improve their golf game.

> Perhaps the "newcomers" don't want to be associated with such lazy

Larry...please point us all to the rules in Part 97 that
require any ham to "be associated with" any other hams...lazy,
dedicated, smart, dumb, or otherwise.

> You have no right to criticize

No opinion? You certainly weren't hesitant about showing it a few posts back
when you mis-read Cecil's question.

I see...now you're putting conditions on your original statement because
Cecil proved you wrong, and you can face up to that fact.

Too bad that happens...and I agree with Larry that such
can be the case in many different settings. Newcomers have
to be welcomed and encouraged or else they just won't
come back. I've seen that in every type of voluntary
endeaver I've been involved with...including ham radio,
public service, antique car club, etc.

The ARRL has been dictating their version of what amateur radio should be
for years, but that's ok because they're the ARRL. Right?

I don't agree with you end result...I suspect there will always
be a niche of CW users. I do agree the number (as a percent of
the total of all hams) will go down over time. But, just as
people still bow hunt, musket shot, or drive 40 year old
antique cars, there will be that niche following.

Thanks for answering my question.

Cheers,
Bill K2UNK

From http://www.nocode.org/articles.html

William A. Tynan, W3XO, Files Scathing "Reply Comments" in RM-9673

Bill Tynan, W3XO, a well-known VHF DXer, former QST columnist, and former President of AMSAT NA, was involved in the filing of and is apparently an ardent supporter of the CSVHFS' Petition for Rulemaking. A number of major organizations have filed comments in opposition to the CSVHFS' Petition, including the ARRL, the Texas VHF FM Society, the 220 Spectrum Management Association of Southern California, and NCI. In his "Reply Comments" W3XO systematically attacks all of these comments in opposition to his desired outcome in the Proceeding, questioning both the motives and the integrity of the organizations in question. He also insinuates that new operators are at the root of the (alleged) "problem" which the Petition "seeks to remedy," stating: "The influx of new operators, most of whom have not been brought up in the tradition of amateur radio and belong to no organization, national or otherwise, can only exacerbate the problem." To view a copy of Mr. Tynan's "Reply Comments" in RM-9673 click in this link. (Adobe .pdf)

Speak for yourself. The exams I took were nowhere near the hardest ever in ham radio. And I would like to think that the accomplishments I have had after I have my license exceeded the accomplishment of passing the test.

Cecil and Carl have both done just what you and I did -- met the requirements in place at the time they were issued their licenses. Those requirements have been through a lot of changes over the years.

Nope. I'd be "judging" your ability to work with others. And, based on
what I see here in this newsgroup, if you are anything like here my
judgement would be that you'd probably disrupt more teammanship than be a
part of or build any.

>
> Your willingness to discourage me due to my

And, you're wrong again. My willingness to discourage someone who may be
disruptive to the smooth operation and transition duties required in an
event proves that I am willing to make decisions not based on popularity,
but on the ability of the group to work effortlessly and seamlessly toward a
common goal--establishing whatever is required from the EOC.

Because of what I've seen on this newsgroup, I question your idea of what a "ham hero" is. You've indicated to me that you think I am a "ham hero" or cop wannabe. I couldn't swear to it, but I think even people who don't like me (because I always challenge status quo in emergency communication services) would say I am not "in it" for the glory.

>
> If being a "politician"

>
> 73 de Larry, K3LT
>

Well, suffice it to say that I did like a lot of the commentary you had in the snipped part of this message. The leadership-that-isn't down here have told me many times that it takes politics to be in emergency communication in ham radio. I say balderdash. I've never "bought into" their crap and the only people whose respect I don't have is, well...guess who, them.

The very commentary you had is the "system" of things that exists many times. What I do is ask questions, on the air. Ask why, on the air. Ask why, in meetings. What "damage" they've tried to do because of all that, I simply remind people of the non-answers they always have. Only thing is, because I've asked those questions and because I've been belligerent in trying to get answers (never did), it is the leadership that keeps me from being involved. Their loss.

Do you happen to remember when I was in a hisi-fit over the whole structure of Dallas RACES/ham radio politics quite some time ago? Remember when Johnny Davis/K5JD, posted a message to this newsgroup that anyone who "wanted the truth" could call him collect? Remember the open post I made back to him asking all those questions? Remember there were no answers? It's because I ask, quote "the wrong" questions. That was then and this is now and I think Dallas RACES has actually improved--ever so slightly--but is still very political. Yeah, that irks the crap out of me because it discourages some damned good volunteers from getting involved. But again, their loss, not mine. I don't even live in Dallas County. I work there and hope I'm not in town if and when something happens down there.

Guess what I did hear a while back on a Dallas RACES net? I've always (or used to always) bugged and bugged about simplex communications. After the 9-11 disaster in NYC, I actually heard a Dallas RACES net control station state during training that they were going to have to begin focusing on some simplex operation training!!! I nearly fell outta my chair. It's about the last net I listened to, so don't know whatever became of it...but I hope they did it and continue to do it.

No, Larry, I would never discourage someone who was interested. But, their interest must extend beyond sniping at others for the way they are *especially* as it relates to ham radio operators. I don't care how someone is as a ham radio operator. One can be the most opinionated bugger in the world--yet be the greatest at team work and team building skills. I don't see you being there. Even for me, it takes great effort sometime and when I was younger I never won over my stupid ego-emotions. I'm older now and "don't care" about ego--I have enough of it to last myself.

Interesting that this particular exchange was quite different from our most.

The post above offers nothing to substantiate your
claim that: "NCI ...then encourages
members to HARASS (emphasis added) someone for
making a comment for that same petition."

Where is there any statements that show NCI is encouraging
anyone to do anything regarding the post above?

Still no cheers :-)

I still think lots and lots of people want the test there to use it as a filter. I say that someone who is an "undesirable" ham will go away after time.

It seems to me that this discussion of what CW's niche might be
concentrates almost solely on HF. In my opinion this may be the less
likely usage over time. There are very few things workable on HF CW
that are not also workable on some other mode. I suspect we will
eventually see the rules change so there is little HF spectrum that
excludes phone but I think we will continue to see CW allowed
everywhere. Usage may fade but I think there will be a cadre of devoted
users for many years to come.
On the other hand, CW for weak signal VHF/UHF work seems firmly
entrenched even though most casual users are likely to be on FM. A good
recent example was the extensive F openings on 6M this fall. There was
a lot of CW DXing going on in addition to SSB.
I can think of VHF DX contacts I have made that were not possible on
Phone due to the weakness of signals. I am not set up for EME, is there
any such thing as Phone Moonbounce? (Yes I know there are also more
modern signal processing techniques but they are not mainstream yet.)

Your ignorance of logic and the English language is astounding. Let
me make it even simpler. Here are two statements which, I presume,
you believe to be true.

1. CW gets through when SSB gets through.
2. CW gets through when SSB doesn't get through.

Does there exist any time other than when SSB gets through or
doesn't get through? No, there isn't. Therefore, when SSB
gets through and when SSB doesn't get through is always, i.e.
100% of the time. There doesn't exist a time when SSB gets
through or SSB doesn't get through.

Therefore, CW always gets through, when SSB does and when SSB
doesn't.

Your statement is false, Dick, and is proven false beyond any
shadow of a doubt. I've noticed you haven't produced a QSO
between your QTH and Europe using CW on 160m at high noon.

It indeed does logically imply always. When other modes get through and
when other modes do not get through is logically always. In other words,
there doesn't exist any other time than when other modes get through or
other modes don't get through.

Let T1 be the time when other modes get through. Let T2 be the time when
other modes do not get through. T1+T2 = all the time. There doesn't exist
any time besides T1+T2. Therefore, CW always gets through. That's a false
statement.

I don't know why you state the above as though it should bear some kind of
extreme importance. It takes many to make this world go 'round, Joshua.
There are at least just as many knowledgeable folks, backed up with some
serious factual evidence, who believe differently than you.

I can't help but wonder if NCI made those comments *based on* the CW issue.
And, if Carl is lying--so what? What *if* NCI also takes on other issues?

So what?

>
> What's really not kosher? When NCI does the above then encourages members

> scurrilous, shameful, and very indicative of their mindset.
>

I agree. However, I've not been witness to it. I also know that politics
(those which embroil every controversial item in ham radio) is quite nasty.

> >
> > No, I think your overreaction is clear.
>
> Hey, I'm just as prone to overreaction as the next person, but here I
> think that the facts do speak for themselves.
>
> joshua houk
> kd7pos
>

Like I said, *if* Carl is lying that is a personal fault. If Carl is lying
and misrepresenting what NCI is all about, shame on him/them. However,
maybe NCI felt compelled to comment on an issue that parallels their
platform. That, I have no problem with. I might tell you today that I
can't stand something. Then, two years from now I am just lovin' it. You
gonna pick then to call me a liar? Maybe I changed my mind?

By the way, the ARRL has members who detract from policy all the time. I
don't know about NCI, but I'm sure that if there are detractors there is a
platform for them utilize. If not, Joshua, then there is always the exit
door. Simple as that.

Larry: I've never seen anyone "whining" about CW. I've seen debates on both sides happen, seen people argue and nearly stomp each other over the issue--but I've never seen anyone whine. Unless you call the statement "I don't like CW and don't want to use it" whining.

I don't.

And, maybe they don't *WANT* to be contest-grade CW operators, Larry.

If ya wanna know the truth, in my opinion the future of the ARS is *always*
in jeopardy. If it ain't one thing, it's another. And, it doesn't take
more, less, highly qualified, meagerly qualified, or anything else to make
it that way. It takes each passing year, and newer and newer technologies.

But to the original "concept"...the Russians
wanted the code test because (I guess) many
Russians only had code capability. Nothing,
however, mandates anyone speak or know
Russian.

Cheers,
Bill K2UNK

4869. NCI Members have no FREE SPEECH

Isnt this cute:

2. Openly making statements in any public forum, opposing the primary goal of NCI, abolition of mandatory Morse code testing in order to hold an amateur license.

You can join, but you can only say what we want you to say. You say a bad word and we will throw you out.

4870. NCI Funds

Now isnt this interesting:

In addition, NCI may choose to publicly comment on matters where Morse code policy directly or indirectly influences amateur radio policies. Examples of topics on which NCI may make comment are licensing structures, band plans and spectrum issues, and especially where operating privileges of no-code amateur licensees are affected

Didnt someone say they would not making comments on Band Plans ?

The above is a classic case of MISDIRECTION in a subject thread,
attempting to steer a thread away from its direction into a pre-
arranged thread of the challenger's own choosing. What is tragic
here is that this "historian expert" on ham radio has previously
"neglected" some full information on the history of communications,
especially that of morse code. What follows is a more complete
communications history, albeit short, but devoid of spin that favors
a historian's favorite mode.

Visual communications "networks" had existed for at least two
centuries prior to the various electrical telegraphy experiments of
the first half of the 1800s. These networks, primarily in France
and Great Britain, required manned "stations" and signalled by
letter-number representative symbols, flags, or torches. While
these were slow and prone to mistakes in transmission, they
were much faster than horse courier modes. An itinerant portrait
painter named Morse received backing from an heir to a railway
equipment family business (Alfred Vail) and developed an
electrical system requiring only a switch or "key" controlling a
battery current flow to a remote electro-magnet-driven ink pen,
later an electro-magnet-driven acoustical "sounder." The original
Morse code was a set of on-off "keyings" in a pattern that
represented a letter, number, word, or some pre-chosen phrases.
The "code" itself was primitive, sufficient to allow "operators" to
note the on-off indications and "receive" them at slow speed,

then transfer them to written paper form. Backer Vail is said to have proposed an alternate code form having two on-times and forming on-off patterns of "dots" and "dashes" to indicate just letters, numerals, or punctuation. This latter form of "code" is slightly faster to use but takes much practice to be proficient at any speed. This primitive system was limited by battery technology, not-yet-developed wire manufacture of that time and had an average range of 20 miles.

The Morse-Vail Telegraphic Relay Apparatus patent of 1840 secured the system commercially in that the "relay" of the patent was essentially an unmanned repeater that could extend a single telegraph circuit to an average of 100 miles without increasing the number of telegraphers beyond one at each terminus. At the time this was an extraordinary technical feat and economically viable as a communications medium. By 1855 many countries had taken up the Morse-Vail telegraph system, built hundreds of miles of circuit pairs, and also developed a number of variations on the original "morse code," always representing one character in their languages by a specific arrythmic on-off pattern.

It should be noted here that "morse code" is not "universal" nor is it necessarily optimum (it has never been quantifiable studied or compared to other methods). What is now called "international morse code" is simply an on-off pattern representation of characters in the English alphabetic-based language. The total of the world's population having alphabet-based languages is a minority; the majority use syllabic or ideographic languages having many more such than the 26 to about 38 letters of the various "western" alphabetic languages. "International morse code" is simply a standardization to one variant of "morse codes" among the several hundred such "morse codes" in the world. The majority of telegraphers had to learn at least part of a second "language" if their primary national language was not in the minority of "western" alphabetic languages.

What is usually lacking in the amateur radio communications histories is that ALL of the "morse codes" indeed ALL of the on-off codings were imperfect and error-prone due to at least two human operators on each circuit. This was made worse when the relatively slow telegraphic throughput (average of about 10 WPM all factors considered) and data security needs (primarily commerce and trading) forced messagers into using "commercial codes." These code books evolved 5-character groups that represented long words, phrases, whole sentences and some quantities. [the "5-letter plus a space" grouping comes from this] Bentley's Commercial Codes ran to over a dozen editions over a quarter century, used less for security reasons (it wasn't) and more for reducing time of messaging.

While a commercial code secured some privacy from telegraphers overtly or inadvertently "eavesdropping" message content, it required an extraordinary proficiency to maintain absolute accuracy. A mistake of one letter or number in a code group could result in a gross error, usually with some economic problems to the messager. None of the "morse codes" have any built-in error detection or correction. The only way to assure accuracy is to "back-send" a message to the originator, have that end check the copy and report of any error. That drops the message throughput rate by at least half, usually a third of the original time if any error did occur. There were several litigations in civil courts of the US during the latter half of the 1800s involving transmission mistakes. As telegrams were used more and more, the communications providers had to find a better method in order to stay in business and out of the courts.

The answer was the teleprinter, a blend of the already-in-use manual typewriter of the 1890s and the telegraph. The tele-printer had been in development since the middle of the 1800s, lagging the manual telegraph due to complexity and state-of-the-machine-arts of the time. The teleprinter offered enormous advantages to communications providers. The primary one was that an exact copy was available at both ends of a circuit; no "translation" was necessary at either end. Speed was an advantage in that early teleprinters met and exceeded the throughput of the best manual telegraphers with less error. An obvious advantage was that it could be operated by "ordinary" clerical help or anyone familiar with the standard keyboards of that time, no specialists required. The punched paper tape (1904 or before, Teletype Corporation) reader and distributor enabled immediate back-sending or re-transmission of the same message if originally on p-tape. Finally, the teleprinter could operate 24/7 between maintenance periods, did not need weekends off or time to sleep or lunch or dinner, never caught a cold or had a headache. It was semi-automatic in that a message could be transmitted and received without any human present at the receiving end.

The communications carriers and governments went for the teleprinter in written communications en masse, hindered only by a few stubborn officials who insisted that everything keep on working in the old, "proven" way. The militaries saw immediate advantages into adapting on-line or off-line encryption to tele-printers. The "stock ticker" (an early model teleprinter) appeared in every stockbroker's office and telegrams began being sent by the "ticker" style of printing on paper tape (then glued on small paper forms).

By the end of the 1800s the skills of the manual telegrapher were becoming unwanted. The "downsizing" of telegraphers began as communications carriers shifted over to the tele-

printers, limited only by new equipment availability and capital equipment budgets. Teleprinters could use the same wire circuits as manual telegraphy. The physical infrastructure was in-place. Laid-off or dismissed telegraphers were angry, bitter that their valued skills were no longer needed. Some became destitute if they did not know another, useful craft. They could no longer brag and demonstrate a specialized skill or feel "important"...they were replaced with a damned machine!

There was an answer just around the corner, proven by several curious genius academics and an entreprenuerial Italian-English lad named Guglielmo Marconi and an experimenting Russian scientist named Aleksandr Popov. The year was 1896. Marconi sent the first radio signals 2 1/2 kilometers near Bologna, Italy, while Popov sent the first message 300 meters in St. Petersburg, Russia (the message was "Heinrich Hertz" the German scientist's name who had observed the first radio wave propagation in his laboratory in Karlsruhe, Germany, in 1887).

RADIO was born only 106 years ago. It was a God-send to the displaced telegrapher.

(continued in part 2)

4873. A Small History of Telegraphic Glory and Despair, Part 2

Message-ID: <20020217195904.18406.00001523@mb-ma.aol.com>
Source record: 34483

(continued from Part 1)

While primitive radio was born in 1896, some growing-up had to be done. Marconi established radio communications between England and France in 1899. It took another two years before the famous 1901 "DX" demonstration between Poldhu, Cornwall, England, across the Atlantic to St. John's, Newfoundland. Marconi had gotten his "S" across the pond.

Two genius Englishmen, Michael Faraday and James Clerk Maxwell had already established the physics and mathematics of electromagnetic wave propagation in the period 1831 to 1864 without using the crude spark gap transmitter Hertz used in Karlsruhe in 1887. Scientist Hertz was a "VHF pioneer" by the descriptions of his experimental transmitting-receiving dipoles. Workable hardware had appeared and it could be demonstrated!

The maritime world was very interested. Where ships had been limited only to visible communications paths (semaphore, light blinkers) the "magic" of radio waves could cut through fog and clouds and bend over the distant horizon to shore stations and other ships. This was truly a mystical mode, old salts and landlubbers alike exclaiming on the "magic" and "romance" of radio. Mariners had little communications with the world before and now they had everything!

A problem was of radio technology. It was PRIMITIVE. Receivers were simply tuned diode detectors. Transmitters used brute-force arc-discharge energy sources ("spark") or specialized high-speed expensive motor-generators ("alternators"). The spark transmitter and "galena crystal" receivers could barely work reliably over the visible horizon. There was only ONE method of carrying any communications over early radio...turning the transmitter on and off in a known pattern. Landline telegraphy used the same mode.

No problem. Out-of-work or about to be out-of-work telegraphers were given short courses in radio operating (longer than seemed necessary since nothing seemed to be standardized yet). They could use their (mostly) unwanted telegraphic skills immediately! The maritime world embraced these "magicians" as God-sends, dubbed them "sparkies" for the audible, sometimes flashing spark transmitters. A "radio room" became standard on ships, a place of mystery and excitement as they pulled messages out of thin air and heard other, unseen ships in distress. Legends were born and tall tales grew in the tradition of the sea. Hero status was awarded the sparkies by the press as they helped save lives in sea

disasters. They could do no wrong. They were quickly made a regular part of a ship's crew for their importance. Legends of expertise were firmly established. Never mind that they used primitive equipment in a primitive manner, they were new and exciting to a majority of humans never having been to sea.

Seemingly forgotten in the glory and heroism of the first two decades of the last century was the everyday communications on land. The invention of the vacuum tube was a quantum leap in electronics technology. True long-distance voice communications could exist on land. The principles of "sideband" were discovered and formulated for landline telephony, the basis for frequency-multiplexing up to four separate voice circuits on a single pair of wires. Up to four tele-printers could now exist on a single voice circuit. Teleprinters became the standard medium for written messaging. Communications carriers did their work 24/7, quietly, without fanfare. The carrier companies pioneered HF communications, adapting their landline carrier equipment to radio for intercontinental communications. The megaton-equivalent explosive growth of electronic-radio technology of the first half of the last century left lay people bewildered...too much for common understanding. As radio grew, a quiet box of hot tubes was foreign, alien, a thing from an unknown universe. A lay person could "under-stand" a buzzing, arcing spark transmitter...it showed evidence of "working" in sensory terms. Lay persons could hear broadcasts and accepted them quickly because the sounds from receiver speakers were familiar. They understood those sounds just as they understood the telephone sounds as familiar or common-language voices. The quiet "black boxes" had no dramatics, devoid of sensory clues except for heat.

By the mid-point of the last century, the legends surrounding morse-manship were firmly established. The mass media entertainment business used the arrythmic morse sounds to emphasize "radio" operation in motion pictures and that newcomer, television. Never mind that such things were used primarily for artistic, nor realistic effect, lay people had associated morse code with radio. Retiring morsemen took their old skills to the hobby of amateur radio and also took their legends and old work ethics with them. The radio world was changing rapidly again in the post-WW2 technology boom even before the semiconductor era beginning about 1960. Retiring morsemen were lagging behind in radio skills as they promoted their old skills and attributes over the mysterious "new" technology in radio. They emphasized morse skill because that was what they could do easily. Not many adapted to new ways.

By the beginning of the semiconductor era the radio world now had television, transcontinental radio relay (hundreds of voice circuits per link) by microwave, the first of the communications satellites, most public safety mobile radios above 30 MHz, private land mobile radios in use by small businesses, private UHF to microwave range fixed radio relay, the first direct-dial-

long-distance telephony beyond domestic boundaries, civil air communications standardized on English worldwide (a result of who won WW2, not that English is the most effective voice language), radiotelephony on cruise ships, voice radio for private boat owners, and a small radio service known as "CB." The teleprinters could run reliably at either 60 WPM or the new 100 WPM rate on landline or radio circuits...and did. Domestic long-distance telephony was commonplace and users could not detect that such circuits were on land or over radio. None of these communications required morse code skills in any way. Radio amateurs were required to know morse code to achieve a license, a permission to transmit on radio.

Twenty years later, by about 1980, intercontinental color television was an established fact, the first of the personal computers had been on the market for a few years, inter-continental direct-dial telephony was an accepted service, so many communications satellites were up and working that equatorial "parking places" had to be worked out. Information Theory had made great strides, now being able to send data at 2400 BPS over voice grade lines. That rate would jump 40-fold in less than a decade. Telephone service from air carriers in flight was begun. The US military began planning the "digital battlefield" of the future with the success of NAVSTAR and such systems as TacFire; their communications had already phased out manual morse methods and frequencies were primarily on VHF and above. The US Army had deployed Troposcatter communications units for radio relay as well as older mulit-channel frequency- and time-multiplexed relay. Citizens Band radio had peaked, now expanding into other countries, sales aided everywhere by low-cost Asian manu-facturing. A new service called "cellular telephony" had begun subscriber trial in urban areas. Amateur radio licenses still required demonstrated morse code proficiency, still touted as a "vital, essential" skill.

By the year 2000 anyone with $1500 could buy a personal computer that had MORE computing speed, MORE mass-storage capability (on tape, disk, CD, or hard disk) on a small desktop than a room-filling IBM 370 mainframe of 1975. Cellular telephony was established with over 40 million subscribers in the USA, cell sites in remote areas, making it possible to direct-dial to any other subscriber in the world. The public Internet was now 8 years old and it was possible to link intercontinentally at a few keystrokes from a residence or office. Modems were now running at 56 KBPS on 3 KHz bandwidth telephone lines. The maritime world had abandoned the old 500 KHz distress-and-safety frequency in favor of GMDSS, ship radio equipment already migrating to voice and data modes earlier. Private boat radios are now on FM over VHF and SSB on HF. Private

Land Mobile Radio Service and private sea and air licensees outnumber total US radio amateur licenses issued. Amateur radio ready-built equipment has precise "VFO-like" frequency control (including "split" frequency capability) as commonplace plus DSP and a number of data modes in ready-to-go peripheral equipment. Digital selection of frequency and function is a common feature of consumer radios, including SW BC portables. The Family Radio Service began in the USA using low-cost ($40/pair in 2002) handheld, palm-sized transceivers with digitized voice; one would save a group of climbers on Mt. Ranier in 2001. The Gulf War is ten years in the past and modern military communications involving voice, data, and imagery has proven itself in a combat zone never once resorting to any morse code modes for any purpose except passive ELINT by MI detachments. Six years earlier FEMA had debuted their transportable sat terminals and used them as "visible bulletin boards" for survivors of the 1994 Northridge Earthquake. The "talking head" portable suitcase-sized journalist's satellite terminal for slow-scan imagery and voice is on the market. Worldwide subscribership for cellular telephony is predicted to number 300 million by 2004. Wireless LANs have proliferated, Ultra-wideband radio makes its debut with FCC beginning studies on how to regulate it, Harris unveils the first Software Defineable Radio for militrary environments. The US military's SINCGARS family begins its 11th operational year as the standard land force small-unit radio, a selectable FHSS type with COMSEC capability. The changeover from analog to digital television broadcasting begins in the USA, promising better video and less TVI from any source (proven in testing). Direct-to-subscriber satellite broadcasting readied, to begin in late 2001 (it does). While an amateur radio license without a code test has existed for ten years, those license classes are restructed to over-30-MHz amateur bands. Amateur licenses having below-30-MHz privileges still require a code test, still touted as a "vital, necessary" skill in radio, to "demonstrate committment and understanding" (only required to old morsemen).

Some old morsemen are forever stuck in a radio time warp of the 1930s while the rest of the radio world has gone far past them, ignoring their old skills that are no longer needed. Even if they were born in the 1950s they demand adherence to standards existing 20 years before they were born.

Of course you'd be as wrong as usual. What it means is that a bunch
of arrogant characters who "just don't want to" do what is required
to get the license, rather would rather spend many years in protest instead of
on the air enjoying ham radio. That anyone can believe
that such a bunch will be valuable assets to ham radio is amazing.

Hi Cecil,
I used to work slow codes on the novice bands (mainly
40m)to help the new novices. I have worked several first
time over the air contacts. It was a kick.

I would not think of working "data" (translate: any mode
that interferes with CW that is not phone) on top of new
novices trying to get their feet wet on the air, or for that
matter, any slow code operators looking for a slow code
contact.

Of course, that is soon all gone. :-(Let me know if you
want a sked.

73,
Clay N4AOX

Let me make it so simple that you can understand it, Dick. Is the
following logically true or false?

"Cars are black."

"All" is clearly implied so this is logically a false statement.
To make the statement true requires a qualifier.

"Some cars are black" is a true statement.

Applying our knowledge of logical truth to the CW statement:

CW often gets through when the other popular modes fail
to do so.

This is a logically true statement depending upon your definition
of "often". Your previous statements completely omitted the case
where CW doesn't get through.

Just wanted to point out that virtually nobody uses those Novice
frequencies anymore. While tuning around there, I hear a CW signal
maybe every 20 minutes usually calling CQ with no response.

I've got a new IC-756pro and am monitoring 7058 right now. If
someone sends CQ, CQ, de _______ FISTS, is he she looking for
FISTS members or will he/she come back to a non-member?

What a crock. Why don't you just set up a math "proof" that
you're as old as your grandfather, like that math teacher?

Bingo. There is no "loyalty oath" attached to ARRL membership. Indeed,
ARRL members can "steer" the process by electing directors who
support their views - even if those views are currently 100% opposed
to current ARRL policy.
>

???What prompted that outburst? The exams I took shortly after
the beginning of Incentive Licensing were certainly tough enough
that one could not pass them without knowing a considerable amount
about the subject matter. I did. I didn't mess a question, as
evidenced by the fact the the FCC official grading the answer sheet
did not make a single move to check an incorrect answer.
That didn't help the "Test protesters" who sat it out for another 30
years till the Grate Dumdown.

> And I would like to think that the accomplishments I have had after I

So I, knowing that I would never again need to take a ham radio
exam, couldn't rest easy in that knowledge while doing constructive
things within ham radio. We got it.
Of course, you're the fella who
also says that "logically" CW won't get through when other modes
can't.

The General test I took about 1959 (highest written test needed
for any additional privileges) only took some routine reviewing
and memorization from this, then teenager.

> I didn't mess a question, as
> evidenced by the fact the the FCC official grading the answer sheet
> did not make a single move to check an incorrect answer.

Who cares. You passed the test. I passed the
test. The grade means nothing. Did you get more
privileges than someone that missed the maximum
allowed while still passing?

> That didn't help the "Test protesters" who sat it out for another 30
> years till the Grate Dumdown.

Huh? Last I checked, the ham license states NOTHING
about your test score. The license as issued shows only
that you passed the same as anyone else.

I think he made his point. The mystery to me is that even with the facts on the side of reducing/eliminating code testing sane adults generally prefer to be in the tent pissing out than outside of it pissing in.

Nope, I say, "Sometimes CW doesn't get through." You say, CW gets
through at all times, both when the other modes are getting through
and also when the other modes are not getting through. So which one
of us is telling the truth? Do you really think, "Cars are black"?

So nothing that is said on rrap can ever be logically correct unless it included all possible cases and covers all situations leaving no room for any part of it to be implied or assumed on the basis that ham radio operators are the readers. And surely engineers should never be assumed to have knowledge of such factors. We see.

I could dig into the archives and scroll out plenty of times when you made such assumptions, but I'm sure that won't be necessary. We all know how it is. And your supporters will be your supporters whatever the situation. Those inclined to support your longterm ingrained trolling will just overlook whatever you do and make every effort to hold me to every dotted i and crossed t, just as you try to co. Sorry I'm so uncooperative, but hey, stuff happens. Even to you.

So now Dick can read people's minds.
Sorry Dick, none of us in NCI have any
such illusions of being able to dictate to
anyone. What we recognized from day one
was that there was a specific process to
be learned, to be followed and we would
do that. We also made our own efforts to
garner support from those that agreed with us.

Cheers,
Bill K2UNK

Don't *need* to read NCI minds, we can read their writings.

4904. Will i lose my novice hf privliges?

I am a tech-plus. I might try building a qrp CW rig. I plan on upgrading
to general. Is the FCC planning to have the novice hf privileges removed
from the tech+ hams to make only three lic classes(tech, general, extra)?
Thanks for your help

Don't think so. But if you upgrade, you'll have access to
those HF freqs no matter what the FCC does with the tech +
privs. While you're upgrading, try for the extra. Doesn't
cost any extra(!) and maybe you'd get it.

Look here for practice tests:

billsohl@mindspring.com says...

> The post above offers nothing to substantiate your
> claim that: "NCI ...then encourages
> members to HARASS (emphasis added) someone for
> making a comment for that same petition."

Certainly does. Why did NCI pick out W3XO? There were certainly dozens of others who commented on RM-9673 without NCI putting out a news bulliten on it. And why is someone making a comment to the FCC in any way newsworthy? There were hundreds of comments about RM-10352 - none of which were singled out on NCI's website. Why this particular person in this particular instance?

> Where is there any statements that show NCI is encouraging
> anyone to do anything regarding the post above?

Did Carl intend for people to read that and just go "eh"? He specifically singled out one person with comments to provoke NCI's membership.

Should we ask W3XO if he was harassed for making his comment to the FCC?

<wyn@worldnet.att.net> writes:

>160 meters was what I mainly had in mind.

OK. Acess to 160 was very limited for many years because of the LORAN
system that used those freqs. It was started during WW2 and lasted many years.

In return for the loss of 160 and the top 50 kHz of 20 (used to be 14,000 to
14,400) we got 15 meters (450 kHz).

Of course several years elapsed between when the band was allocated (1947)
and when hams were allowed to use it.

>For US ARS I
>believe there are still restrictions on VHF and UHF
>frequencies use along parts of the Canadian Border for
>security purposes. Of course in the 40's, VHF and UHF were
>not as cherished by the ARS as they are today.

I think those restrictions are much newer than WW2.

Also the wind shear radar limitations on 70 cm and the quiet zone
around the radio astronomy area.

There you go again, taking everything to the rail. The addition of
one word to your CW statement makes it true instead of false. Why
on earth would you refuse to add that simple word? You refuse to
discuss the simple statement, "cars are black", which illustrates
exactly what is logically wrong with your CW statement. The fact
that you refuse to add the word, "often", to your statement about
CW is a clue to your supernatural feelings concerning CW.

Exactly, Ed, that is exactly what is wrong with Dick's statement. It
presumes that no other combination can exist. The addition of the
qualifier word, "often" or "sometimes", would indicate that other
conditions can exist. My argument is based on the accepted rules
of mathematical logic.

Do you think, "cars are black", is a true statement? It's not. It
needs a qualifier like, "some", to make it logically true. I can
dig out the rules of logic that apply if you would like.

Speaking as a Firefighter, the requirements keep going up every year as to the amounts and levels of training necessary. Fortunately most all of the training we recieve is directly related to our jobs. As to why fire departments keep getting new people? Hopefully for the same reason I joined the fire service, to serve my community. Along with the fact that it is one of the most exciting careers out there! :)

> All are possible under different circumstances and none of them imply "always."

Yes, Ed, they all imply, "always", and statements 1 and 4 contradict each other. Statements 2 and 3 contradict each other. In order for any of those statements to be valid, a qualifier, such as "often" or "sometimes" must be used. From logic/probability, one must mind one's p's and q's. If you add the qualifier "sometimes" to all of those statements, they will all be valid.

There are times when CW gets through when SSB doesn't get through.

That's a true statement because it implies that there exist times when CW doesn't get through.

Wrong. ARRL's leadership have expressed their views on the subject, nothing
more. That leadership is elected by the members, btw.

Message-ID: <20020218091859.13794.00000658@mb-dd.aol.com>
Source record: 34443

Dear Leonard,

Enclosed is a copy of a recent post in which you assert that you were "rejected" for membership in NCI.

I had forgotten this particular item until an interested third party brought it up to me, but Carl had SPECIFICALLY solicited your membership IN THIS FORUM. He's a board member. I assume he has the authority to grant your membership.

Also, I know of other "unlicensed" persons who joined.

You really DO enjoy being made a fool of, don't you?

Keep it up, Anderson. Your date with the maker can't be far off. If I were you, I'd be doubling down on good deeds right now.

Lying in a public forum ain't heping things!

Joshua, I'm NOT a member of NCI nor of the ARRL and my license is commercial, not non-commercial (amateur). *I* am not in favor of OOK CW for either use or testing requirements. NCI rejected me for membership despite actually operating (legally) HF transmitters 49 years ago...and having since operated on more parts of the EM spectrum than are allocated to amateurs, with more different modes than are allocated to US amateurs..

I assure you I am not trivializing their deaths. I am upset whenever
I hear of decent people losing their lives in an undeserving way.

What I *am* trivializing are the comments about how "hams have died
trying to activate X". The original discussion (a tangent from the
eQSL subject) was whether DXpeditioners lose money due to eQSL's; i.e.
whether they deserve monetary compensation for their efforts. I, for
one, typically send $5 to a DXpedition group when I request a QSL.
I appreciate what they do, and want to help out. That a few DXers
have died on an expedition does not make DXpeditions more noble, nor
does it make them more deserving of cash. It's simply an unfortunate
occurence, like an ice fisherman who falls through the ice or a skier
who hits a tree.

That rule makes perfect sense, though.

The organization claims to exist for a single purpose. Suppose a member starts to behave in a way exactly opposite to that single purpose. It is only logical for the organization to "accept the resignation" of the member who does so.

By putting that rule in the by-laws, the organization serves notice up-front as to what they consider acceptable behavior. They avoid a lot of confusion and argument. If ya don't like it, don't join. Simple.
>
>What would FISTS do with a member who publicly asserted that he hates CW?

Nothing. The organization is about promoting and preserving the mode. People can "hate" something yet still be interested in its preservation.

Why would a person who "hates" CW become a member of FISTS, anyway?

Dave:

The recommendation from the ARRL to the FCC would expand the HF CW privileges for Tech+ and Novice license holders (10m phone would remain unchanged).

Not for a moment. If Carl's diction doesn't read as dictatorial to
you you need to borrow Cecil's dictionary.

> It would not have sounded nearly so onerous had he told the truth

> There are times when CW gets through when SSB doesn't get through.
>
> That's a true statement because it implies that there exist times
> when CW doesn't get through.

And all of that clearly shows the fallacy of attempting to use pure logic in
circumstances where statements depend on the context in
which they are used. The application of pure logic excludes all
previous knowledge which in the case of "CW gets through when other modes cannot" is
a sequentiallty occuring statement, dependant on those prior facts. As in "it
happensBy your application of pure logic,
it happens, all the time, whatever it is! Silly to the max! and not even
logical.
But you already knew that, of course, and your application
of logic was pure Trollism, as per your usual.

Sure did. I enjoyed being a Novice before I upgraded to Conditional.
I enjoyed being a Conditional/General before I upgraded to Advanced.
I enjoyed being an Advanced before I upgraded to Extra. Fact is, I
have not used any of my Extra privileges so far and in spite of that
fact, Dick still rags on me for not upgrading sooner. The strange
thing is that I first upgraded long before he did.

Which means you didn't copy someone else's design.

> In other words, he rearranges standard logic blocks. If that's "design", then
> W0EX is an RF system designer.

Rearranging standard logic blocks is logic design, Jim. If I copy a relay
driver circuit that uses a 2N2222 and substitute a 2N3904, I have not done
any design. Dick won't say what he did so I have no way of knowing whether
he designed anything or not. I assume he copied circuits designed by others.
He did not deny doing so or explain what he really did. A man who refuses to
defend himself is usually guilty.

> >I suspect all screwdrivers operate essentially the same way.
>
> Therefore it's not unique, or new.

If you know of another design that automatically puts the IC-706 into tune
mode when the screwdriver motor is engaged, I would like to know about it.
I have never heard of it being done before by one relay and one resistor.

> That you have not found them does not mean they do not exist.

Well, that's true and is the reason that patent lawyers do patent searches.
Do you know of any two-component systems that automatically key the IC-706
into tune mode when the screwdriver motor is engaged? I would really
appreciate knowing about it.

>On what basis? Do they have a requirement that members be licensed hams?

I haven't checked...what are their requirements, Ed?

>If it would console you, you can be an ARRL member.

That does no consolation. ARRL "membership" is NON-VOTING if a member has no amateur license. The only reason to be a non-voting member in any organization is ego boost. It gains nothing else, has no assurances that any "director" (that I didn't and could not vote for) will listen to comments/suggestions.

Ed, please avoid trying to pull wool over sheep's eyes. Hans Brakob tried that same ploy a year ago. I am not sheep and you are not a salesman, nor are you good at misdirection of a thread.

I've been a voting member of the ACM courtesy of my IEEE voting membership, got an actual t-shirt free for that (true). Would I get a free t-shirt for joining the ARRL as a NON-VOTING member? I can be a voting member of the Radio Club of America for a small, very small fee. The RCA was begun well before St.Hiram organized the ARRL. The RCA (not, never a part of the former RCA Corporation) is interested in ALL radio, not the subset of radio enjoyed by amateur hobbyists.

For some slight misdirection, allow me to mention another hobbyist organization, the Academy of Model Aeronautics. Founded in 1936, it now has 170 thousand members (about the same as the ARRL), has its own Headquarters staff (like the ARRL), its own Hq building complex (like the ARRL), publishes its own membership magazine (like QST) which must compete for advertising revenue with other model magazines not affiliated with any clubs, has just completed a museum (like the ARRL's). Instead of an antenna farm, it has a much larger flying area adjacent to its midwest headquarters. The AMA is allied with foreign model organizations (but doesn't have web pages on their Internet site like the ARRL does for the IARU). The AMA

maintains a set of competitive contest rules, comprehensive and covering all aspects of model flying and some surface model competition. Like the ARRL the AMA encourages and monitors safety, much more conscious of the impact of model flying on the public (active campaigns, visibility) than the ARRL, gets slightly more media exposure than the ARRL (the recent AMA Convention in Pasadena, CA, got more LA TIMES column inches and NBC-CBS-ABC news video than the Glendale, CA, amateur emergency organization activity. Enthusiast-hobbyist-activists of modeling are active enough, volunteer enough, to be able to secure public recreational locations of rather large size (Sepulveda Dam Recreational Area in the San Fernando Valley here in a relatively dense urban area). There are hobbyist-activists who are into lobbying government(s) in various parts of the nation to secure flying areas. You can find out more by accessing www.modelaircraft.org

What does that have to do with radio? Model flying has evolved in its majority to radio control. Part 95 of Title 47 CFR has a specific section on telecommand or "R/C" with many allocated frequencies solely for telecommand. Model flying includes all phases from free-flight (my first activity, no R/C on free-flight permitted in 1947-1951) to "park flying" (occassional fun flying) to aerobatics (single or multiple aircraft) to U-control combat to high-tech model helicopters (R/C, some able to fly and hover inverted...have to see them to believe them). I was an AMA voting member in post-WW2 times (AMA 19700) and a "professional hobbyist" working part-time at Testor's while in high school (in their model shop) before Testor's got into the plastic model part of the hobby industry. I helped develop the gang-sawing of balsa (a technique stolen by Sig, a competitor in balsa suppies located in Montezuma, IA) at Testor's. I have some experience in the post-WW2 hobby industry.

Modeling is no longer limited by balsa sticks and tissue paper but has embraced all manner of construction materials and techniques. Modelers exist who prize balsa-silkspan structures much as boatanchor hams want radios that glow in the dark. That's a skill-required technique needing much patience and sense of workmanship. It is no less skilled to use fiberglass, plastic sheet covering and foam-plastic-core wing and tail structures. Some radio amateurs refuse to get involved with "modern" semiconductors or any non-vacuum-tube technology.

I'd say that modern aeronautics and real aircraft have advanced since the end of WW2. While aeronautical engineering has concentrated on supersonic flight, it has also advanced general aviation for private fun flying, competitive aerobatics, ultralight, hang-gliding going as far as the first man-powered aircraft ("Gossamer Albatross") to the notable Rutan-Yeager round-the-world flight without landing. Aeronautics has advanced in

several quantum leaps in almost the same period that radio and electronics has advanced (first manned heavier-than-air flight in 1903, Marconi getting his "S" across the pond in 1901).

AMA has about 170 thousand members. ARRL has about 170 thousand members. Both are organized, have permanent Hq, have publications, have activists and volunteers, have foreign organization ties, are subject to government regulations (both FCC and FAA), lobby the government for their "causes," are concerned about public relations (although AMA does more by public evidence), members of both have served in the US military and some dying for their country while in service. Both have museums and welcome visitors at their respective Headquarters and seek to preserve their respective history and lore and whatnot.

The outstanding difference between the two organizations is that the AMA doesn't go into self-patronizing flag-waving of how "good and important they are for the country and national defense-safety" nor do they go off on fantasy island dreaming of preserving old traditions and practices "for advancement of the state of the art" or to make their hobby "a start of life-long learning, service, and dedication" nor do they continually promote their hobby as such a "service" as a craft-guild-union with appropriate class distinctions, titles, labels, credentials so as to make all newcomers feel as lowly on the multi-tiered totem-pole of "excellence" and "worthiness" to their "community." The AMA simply goes into the fun and recreation of their hobby, concentrates on that, works for that, only gets "authoritative" on being the ruling body and arbiter of competitions. That works. The AMA has enjoyed 66 years of existance, wasn't shut down during any war. Model hobbyists can demonstrate their skills and abilities in front of everyone, hobbyists or non-hobbyists alike without needing tall tales, certificates, or wearing any flags except a channel indicator on their R/C antennas.

I am fully qualified (perhaps overly so compared to present company) to design, build, test, and operate a radio in nearly all US radio services; I'm not _authorized_ to transmit on amateur band frequencies that are primary to amateurs.
I am fully qualified though slightly out of practice to design, build, test, and fly a model aircraft under 55 pounds in weight and, like all, subject to local FAA flying rules near airways and airports. I don't need to learn morse code to be evidenciary of a "vital necessity skill" mode for R/C model flying nor even take any federal tests for same...nor do I have to adopt a fraternal order mind-set that embraces gratuitous lodge-hall self-promotion as a lifestyle. Model aircraft flying is just fun, recreational all by itself. No pretenses, no camoflage, everything out in the open.

In all honesty, which membership do you think is the most
attractive to the public?

With all due regards,
a winner in the 1948 Plymouth Internationals, Detroit, MI

writes:

>Add to that the fact that even *if* CW "gets through when other modes fail,"
>it should never be more relied upon than any other mode, phone included.

So even if Mode X is the most reliable, we should not rely upon Mode X more
than other modes? That's just not logical.

>For each and every circumstance in which phone won't work, packet won't
>work, 20M won't work, CW won't work, there is a likely circumstance that
>will take its place.

Nonsense. You must not understand much about reliability and availability, Kim.

>No mode should be "favored" over another for
>reliance--they all have their place.

Yes, they all have their place. But it is simply illogical to say that a more
reliable mode should not be relied upon more than a less reliable one.

Suppose:

Car A will get me where I want to go 99% of the time
Car B will get me where I want to go 69% of the time
Car C will get me where I want to go 39% of the time.

If it's really important that I get where I want to go, I'm
going to take Car A, if available. You're saying that I
should not "favor" Car A over Car B or Car C just
because it gets me where I want to go.

>
>I still think lots and lots of people want the test there to use it as a
>filter.

If it works as one, is that a bad thing?

I think what REALLY irks some folks about the code test is its function
as an equalizer for MOST new hams. Except for a very few potential
hams who already know the code, it's a start-from-scratch learning
experience that cannot be done by reading a book now and then.
Age and experience in other radio activities don't help much. The
fabled Ph.D. in EE, the electronics tech, and almost all others are
suddenly given the same task as the pre-teenager who would be a
ham. Just from comments I've read here, that simple fact annoys
some folks no end.

In fact, that's probably what bothers many folks about the code,
test or no test. The grumpy "old-timer's" CV/resume means
nothing in a pileup.

> I say that someone who is an "undesirable" ham will go away after
>time.

All of us will "go away" after enough time. But the fact is that the
"undesirables" have become far more numerous and visible (audible?)
than in the past.

Your answer to number 1 actually answers what I was trying to say in
number 5 -- "Element credit locked in by a license is good forever."
The catch in number 5 is the 365-day expiration of the April 15, 2000,
et. seq., CSCE for Element 3. One needs the General to lock in the
Element 3 credit in order to take Extra after the 365-day period on
the CSCE.

BUT ... a big thanks for answering my "not sures." Good information.

I think the failed motion concerned petitioning the FCC to change
those rules. I'm at a loss to imagine the considerations which
led to the motion failing, though I guess one could find this out
by asking.

While on the topic, and I'll probably get in trouble with Phil Kane
again, don't the current FCC rules strike you as, well, weird? If
the bits you are sending in the phone bands are well-compressed voice
its okay, if they're well-compressed text it's not okay, if they're
well-compressed pictures it's okay, unless they're well-compressed
pictures of text in which case maybe it's not okay, if they're the
output of a pseudo-random number generator sent to test the error
characteristics or propagation delay of the link it's probably okay,
unless you've modified the output of the PRNG by exclusive-oring it
with some lower-speed message in which case it is "spread spectrum"
and not okay, even though the bits generated by any of these processes,
if well-done, will be virtually indistinguishable when put on the
communications channel (there's a theorem about this, but I forget
whose).

That the distinctions are drawn by trivial differences in how the
bits were generated, rather than the more fundamental properties of
the communications channel like occupied bandwidth and maybe symbol
rate and modulation characteristics, seems so utterly at odds with the
way digital technology is used in the real world that I'm having trouble
finding any logic in it, especially when the regulations are utterly
silent on digital voice and image coding and hence seem to allow anything.
That is, if you implement your high-compression voice codec by using voice
recognition software (IBM sells some that is good) to generate text
in real time, then compress and send the text, and then use audible
reading software to regenerate voice at the far end from the text then
you've got something legal to run in the phone bands, but if you generate
the same text by just typing real fast then you can only do it if you
change frequencies and fit in tigher bandwidth constraints? It's bizarre.

It is a good thing hardly anyone actually experiments with this stuff since the regulations for anything that isn't either exceedingly slow or a traditional analog mode are irrational.

What is all gone? Slow code? Hams can operate OOK CW at almost any speed they want. If ARRL's plan to refarm the Novice/Tech+ bands goes through, Novices and Tech+s will have spectrum elsewhere in the band.

If my old Novice buddy and I are going to have our 3704 reunion, we better do it soon, though. :-)

In article <20020218091859.13794.00000658@mb-dd.aol.com>, k4yz@aol.com (Steve Robeson K4YZ) writes:

> Enclosed is a copy of a recent post in which you assert that you were
>"rejected" for membership in NCI.
>
> I had forgotten this particular item until an interested third party
>brought it up to me, but Carl had SPECIFICALLY solicited your membership IN
>THIS FORUM. He's a board member. I assume he has the authority to grant
>your membership.

Ordinarily, I reject Robeson's messages and do not reply to those who have such a deep personal mental aberration that they must confront and attack any posting of another just for the sake of confrontation and attack.

An archive search way back before Robeson joined this chat room, NCI did solicit membership in a general invitation. Carl Stevenson was NOT the executive director at that time. Google will have the dates and times of postings. AT THAT TIME I applied for membership with NCI through their website. The first application went unanswered. A second application was made. That was also unanswered. All of those applications and direct correspondence with NCI are not on any public record or archive.

In a later public posting in this chat room, I mentioned this to Carl Stevenson. He informed me that NCI membership rules "had been changed" and that I was now (at that time) "eligible for member-ship." I answered that posting saying that I had no further desire to apply for any NCI membership but that I supported their position. Those messages are archived and were all public. See also a few messages of at least three years ago between Bill Sohl and myself discussing this matter in public. Those messages are public and archived.

None of that in any way was a negative on either NCI has an organization, its purposes, or the correspondents Anderson, Sohl, and Stevenson. The messaging was about the criteria for membership in NCI. Their original criteria rejected those applicants who did not possess an amateur radio license. That has been changed so that those not licensed in an amateur radio service may have membership.

Some time close to that time period was the ending of the Comment period on NPRM 98-143 (FCC date 15 January 1999). I had submitted a 14-page text Reply to Comments to a Comment

made by Michael Deignan. Due to press of other personal activity I was late but within the deadline, my document indicated as being in the FCC record on 13 January 1999, FCC notation made to indicate paper copies received in the requested quantities along with a 3 1/2" disk containing the test in WordPerfect format.

FCC public record shows that Robeson "replied" to my Reply to Comments on 25 January 1999, filed electronically ten days AFTER the deadline. In that brief one-paragraph "reply," Robeson made NO mention of ANY of the items that I addressed in 14 pages of single-spaced text. Robeson demanded that the FCC discount ALL of my submission because I did not have an amateur radio license. That is all on the public record. At that same time Robeson was making confrontational, accusatory, personal-attack statements in this newsgroup and not achieving his apparently-desired goal of subjugation of any or all who have or had viewpoints other than Robeson's. The timing of that was not coincidental or random, it was a deliberate attack by Robeson to limit my freedom of petitioning to my government as a citizen.

Two other "regulars" in this newsgroup (or chat room, it is difficult to tell sometimes) have since "commented" on my comments, specifically in pages 13, 14 of my text concerning a last item on suggestions for a minimum age. That was opened by Hans Brakob and, while confrontational and accusatory, Brakob never once stated, insinuated, or hinted that I be denied my freedom to petition my government on anything in government. Robeson, in a direct comment had done that very thing directly and has stated in a public message in here that I had "no right" to make any comment to my government based solely on Robeson's personal beliefs (or mental aberrations); that is also public in any newsgroup archive.

As part of my total submission to the FCC on 98-143, I included a cover letter, common practice in business correspondence, stating the contents of the envelope submitted for USPS delivery. In a lengthy and unneccessary series of newsgroup messages, Robeson insisted later that my Reply to Comments was "15 pages" instead of 14 due to the FCC recorder including that cover letter as part of my submitted document. Anyone who had downloaded that particular Reply to Comments could see the page numbers and count for themselves. Robeson insisted on being "right" no matter what the evidence, that I submitted "15 pages" and that I "lied" in the newsgroup. Clearly that indicated Robeson had no wish to discuss anything, just attack, fight, destroy another he did not like. His manner to some others in this newsgroup is consistent with that. No discussion on subjects, just attempts at subjugation through personal attack.

Robeson has continually used the word "lie" and "lying" as a pejorative. This is a curious thing considering that subjects in

threads can be easily supported on facts obtainable from
disinterested sources. However, Robeson uses them rather
clearly in a personal-attack mode against another. Those reasons
might be:
1. He was once caught lying in the past and this has left an
indelible spot on his psyche, correlated with some personal
shame. A method to erase that spot is to make others try to
feel as liars or do as psychologists call "transferrence," to role-
switch so that he is the accuser and the victim of accusation is
no longer him but someone he dislikes, to let them suffer so
that he does not have to endure more painful memories.
2. Beliefs and Truth have been fused in his own perception so that
anything against his personal Belief-set is therefore untrue. This
has been seen in others in this newsgroup. This seems popular
with ex-military types.
3. The control-freak cum bully mind-set. Domination of everything is
their control. They cannot fit into an environment so they seek to
change an environment to something they can handle by any
means possible. Such cannot compromise, cannot accept any
condition but their own. It is a total thing, accept theirs or die.
4. Frustration at failing to achieve certain things in life, anything from
education to occupation to avocation to choice of mate, or to find
out that there is no guarantee in life that they are owed good things
just because they exist. A psychological survival tactic is to
demean those who have achieved things, denigrate accomplishments,
to elevate their own accomplishments far above anyone else's.

> Also, I know of other "unlicensed" persons who joined.

That must have happened after NCI changed their membership criteria
but is not bona fide factual information. Only the NCI can say who is
a member and not a member.

> You really DO enjoy being made a fool of, don't you?

That stand-alone sentence is another in a series of Big Lie technique
statements made by Robeson. The Big Lie technique consists of
constant repetition of statements over a period of time in the hopes
that someone will believe it. It is a covert form of subjugation, knowing
that that the chargee will eventually grow tired of refuting an obvious
pejorative. The charger can then claim "success" when refutations
stop...the charger is vindicated by default.

> Keep it up, Anderson. Your date with the maker can't be far off. If I
>were you, I'd be doubling down on good deeds right now.

This is another perverse attempt at harassment and/or attack. No one
is immortal, everyone will eventually die. It is a condition of being
human. Those who are relatively sane have already come to grips
with reality and must accept it. He is expressing denial that others
have done things before his time, of greater difficulty or greater
accomplishments than his.

Rather than learn from older person's experiences he wishes to subjugate them, to forbid them doing anything in "his" territory. Robeson has previously demanded "learning" such as in microwave theory and techniques, for free. He may think such a thing is a few sentences in length where the condensed version is easily a full year's formal study of 6 hours classroom per day. That may be ignorance on his part but it is always perceived as supremely arrogant in demanding free instruction just because he asked for it!

> Lying in a public forum ain't heping things!

The charges of "lying" have been refuted. Unfortunately, some of a rare gender dislike "long, boring" messages that do not entertain them. :-)

To verify, one need only to do a FULL access to the appropriate subjects at Google archives and/or consult the FCC full public document record on NPRM 98-143. This discussion is closed.

News Flash:

ITU-R S25.5 has not yet been changed, nor is there any released statement on the FCC's version of the US administration position on agenda item 1.7.1 for WRC-03.

Test element 1 as described in Part 97, Title 47 CFR, still requires a passing of a morse code cognition test for a US amateur radio license class of General or Extra.

There has been NO "elimination" of the code test in US regulations.

McCollum's insinuation of "elimination" must be in regard to his wanting to piss on others. :-)

Those who say that are generally trying to pull the wool over others' eyes.
N2EY forgets that others are not PCTA sheep.

Wool shrinks when wet. Some PCTA opinions are all wet. Ergo, the
"truth" as the PCTA wishes it to be is no longer truth.

>Bingo. There is no "loyalty oath" attached to ARRL membership. Indeed,

Members must, for according to "the Amateur's Code" published in all
ARRL Handbooks since 1978...

"Two
The Amateur is Loyal...He offers his loyalty, encouragement and support
to his fellow radio amateurs, his local club and to the American Radio
Relay League, through which amateur radio is reprsented."

Golly, Gomer, that there shore do look like falling into the ARRL Party
Line in a rather absolute way. No excuses. The ONLY national amateur
radio organization is the ARRL, the only one claimed to represent all
amateur radio.

>>Hey, I'm just as prone to overreaction as the next person, but here I
>>think that the facts do speak for themselves.
>
>Only to those who can see them.

It is not unknown to see things that aren't there in all aspects of human endeavor. Astigmatism exists in mental sight just as it does in opthalmy.

It is well known in this newsgroup that some lie by omission, the deliberate omission of certain facts so as to emphasize their points of propaganda.

With all kind regards,
20/20

You're not going to like this, WA8ULX:

From http://www.arrl.org/aabl.html#bylaws

ARRL BY-LAWS

Members

2. Applications for membership or renewal of membership shall be submitted to the Secretary. In the case of any applicant whose character, reputation or conduct might make him an undesirable member, the Secretary shall refer the application to the Executive Committee for review; in all other cases, the Secretary shall have the authority to grant membership.

Hmmmm, while I don't have a problem with the above, just as I don't have a problem with NCI's #2, above, I wonder if you'd place the same scrutiny on the ARRL--especially since "character, reputation or conduct *MIGHT* (emphasis mine) make him an undesirable member" is pretty darned loosely defined. At least the NCI #2 is clear and leaves little ambiguity.

Who's doing the above, Dick? And, why are you so concerned about them? Or,
are you saying there are ARS licensees who did *not* do what was required to
get the license, but have the license anyway?

Why would "such a bunch" be a valuable asset ham radio--unless you're
speaking of the general public and then, while not directly an asset--we
need all the help we can get, don't we?

So, you have no problem with the loosely defined statement below:

http://www.arrl.org/aabl.html#bylaws

BY-LAWS

Members

2. Applications for membership or renewal of membership shall be submitted to the Secretary. In the case of any applicant whose character, reputation or conduct might make him an undesirable member, the Secretary shall refer the application to the Executive Committee for review; in all other cases, the Secretary shall have the authority to grant membership.

You know, by the standards noted above, I wonder if my "reputation" makes me a questionable ARRL Member. I wonder if my "conduct" makes me a questionable ARRL member. It's all quite loosely defined, probably deliberately so.

By the way, the caveat of those elected Directors is that there is little accountability at that level.

I don't think your interpreatation of this is correct. However, your mileage may vary. I would expect any organization to get involved with any facet that comes under their charter. If bandplans are in some way affected by CW policy decisions, then it would be irresponsible of NCI to ignore the matter.

Not only is he tedious and monotonous, but extremely long-winded and wrapped up in himself as well.

I did notice that he continually keeps retro'ing back to this splendid military career of his. Based on literally lots of actual veterans I know who experienced war up close and personal, I found them to very quiet about their "careers" regardless of where they served. Those that had to mention their military experiences in every other sentence were so far back from the actual "war" that they the closest they came to front line action was trying to cut the line at the base PX to see war footage on the silver screen. Based on this NG's career veteran, I figure him to be either a cook or a clerk and so far from any front lines that the only action he'd have seen was as they emptied the trash or the latrines.

Keep on calling 'em as you see them. You were right on the nose for this one. High 5's all around.

Ya think he'll take a hint and keep the self serving posts to a minimum...nah...he's on a roll (not Larry Kramden). Only 4 stories of his amazing life, including that thrilling 2 parter. Can he cut and paste or what. And that thrilling analogy about being able to legally use HF..wow how exciting except for the fact that it was not frequencies available to amateur radio operators and since this is an amateur radio NG, just serves as self puffery.

Hope to c u on 10 metres some day. Be interested to actually talk to some NG denizens, the legally licensed ones that is.

I don't think there's any difference when the ARRL chose to campaign against
the W5YI initiative, back when I was first licensed. Hell, I can't even
remember now what the issue was--but I do remember the hoopla.

And, actually, I'm not even sure it was a direct ARRL campaign, but I'd be
willing to bet it was directed from HQ.

It's called politics, Joshua. If it's something you agree with, then it's
OK. When it's something you totally disagree with, then it's a conspiracy.

I can tell you that even though CW is supposed to be as reliable as people say it is, I don't think we should rely on CW that much. Yes, that is what I am saying. Why? Because even though CW may be that reliable, there are more reasons not to rely on it than its reliance.

> 73 de Jim, N2EY

Nope. Because even though Car A may get you where you want to go, you may be better off with Car C. What if Car A is *most* likely to get you where you want to go, but there's few garages that can trouble-shoot a problem with it, if one should occur, and less parts available since it's so darned reliable? Then, Car C--a less likely car to get you where you want to go--has a higher rate of mechanics who understand it and can fix it, and a much greater availability of parts. Guess which one I would take on a long trip?

Hey, kewl...keep a listen up. I don't know where you are (heck, what's your
call), but I have just installed this weekend, my 10M radio, have the Wilson
1000 up on top of the truck, and I even took a listen this afternoon.
Sounded like a lot of great QSOs. Over the weekend I took a listen while
installing and it sounded as though there was a contest...maybe a 10-10
contest. I'm a 10-10 member myself, but it sure would be nice to turn 10M
on during a weekend without a 10-10 hunt going on, sheesh...LOL

Anyway, give me a sked and we can try it. I'd be around between 6:15A-7:15A, then about 4:15P-5:30P on the weekdays. That's when I'm mobile, most of the time. My hubby and I have a Yaesu 890AT sitting right here, and never even turn the thing on. He and I said a long time ago, no TV in the bedroom. We *should* have said no TV in the office/shack...LOL

:-)

Dennis, welcome to the club! :-) :-) :-)

Er, I think you "lost" a lot of the PCTA traditionalists with "modern" terms like "exclusive-ORing" (over 40 years old) and PRNG/PRSG acronyms (at least 20 years old) and such like. :-)

REAL ham radio to the PCTA doesn't operate with "bits," only "dits" (plus dashes and spaces). :-)

"Gigahertz for gigasquirts!" - KH2D circa 1997.

"Ein ham, ein volk, ein kode!" - just about every PCTA in here.

"One enhances the state of the radio art by demanding
all to learn morse code and achieving proficiency in morse
at high speeds! That is REAL ham radio!" - PCTA psalm

There is so much difference I'm frankly amazed that anyone would compare
the two.

The W5YI initiative, whatever it was, would have been an FCC *proposal*.

W3XO did not have an FCC proposal on the table, he simply made a public
comment on a proposal in front of the FCC.

Do you seriously expect the ARRL not to comment on a proposed rule for
Part 97??? Can you come up with one instance where the ARRL publicly
noted a *comment* made by someone in response to an proposed FCC rule?

>any design.

Don't get me started on relay circuits and design. I've done a few of those.
;-)

>Dick won't say what he did so I have no way of knowing whether
>he designed anything or not.

He described at least one project that I know of. There are probably lots more.
From his description of his pair of 813s amplifier I would say some fairly
serious RF design took place. Also power supply and control circuit design,
mechanical design and layout, fabrication, and testing.

> I assume he copied circuits designed by others.

Not a good assumption. And there's a lot more to designing a rig than the
circuit.

>He did not deny doing so or explain what he really did.

Yes, he did, in at least one instance cited here..

How many amateur receivers, transmitters or transceivers have you designed and built, Cecil?

>A man who refuses to defend himself is usually guilty.

To a biased judge, maybe. JC didn't defend himself.
>
>> >I suspect all screwdrivers operate essentially the same way.

>Well, that's true and is the reason that patent lawyers do patent searches.

You gonna patent it?

>Do you know of any two-component systems that automatically key the IC-706
>into tune mode when the screwdriver motor is engaged?

Nope. Yours uses at least three components.

You coulda used an optoisolator and eliminated the mechanical relay, too. As much as I like relays, the cheap ones can be trouble.

Not necessarily. Rearranging standard logic blocks results in a brand new
function. Does rearranging RF blocks result in a brand new function?

> How many amateur receivers, transmitters or transceivers have you designed and
> built, Cecil?

None. I always copied existing circuits and integrated them. I did, however,
do original designs for controllers for transceivers.

> You coulda used an optoisolator and eliminated the mechanical relay, too. As

I had RFI problems with solid state on 10m. That good old mechanical relay
cannot follow RF.

It certainly did for me -- nothing else was able to accomplish that
goal, including a lot of "selling of the mode" by hams who used and
loved CW at the time.

>This is getting really confusing, Little Dick.

That's MISTER Carroll to you, dear.

>It sounds more
>like you wish to force CW on people. Is that right?

How can Dick, or anyone else, "force" CW on anyone? Nobody was
able to "force" it on me -- I learned it because I wanted to be a ham
with HF privileges, and code tests were required.

>Having CW as a phase of testing does not do anything one way or the other
>for whether someone is going to use it or not.

Well, it certainly did for me, since I had no intention when initially
licensed to become a CW operator. In fact, I was (at the time) a
most vociferous NCTA kinda guy. If NCI had existed then, I may
have joined. However, learning the code and getting on the air a
few times got me "hooked," and before I even thought I was ready
to take it, I had passed my 20 WPM code test! If code testing had
never been a requirement, I very strongly doubt that I would have
become a CW operator, although I'm not saying it's impossible that
I could have in the absence of the requirement. After all, it was my
umpteenth bad experience with a rabid Ten-Ten number chaser
on 10-meters that put me off of SSB operation back in the early
'90's. Of course, if I hadn't passed at least a 13 WPM code test,
I wouldn't have been on SSB, wouldn't I? Therefore, knowing the
code, and passing the tests, both got me ON the CW bands, and
OFF of the phone bands! Talk about your unintended consequences!

> the two.
>

Quite frankly, not as amazed as I am over the energy you are expending in feeble attempts to discredit an organization. Could it be simply because their mission is something you are so opposed to? Being opposed to their charter is fine, but why is that you find it so easy and correct to attempt to discredit them, rather than either starting your own organization (oh, that would take way too much effort, eh?), or just waiting around for it to flop--if you believe you're in such a majority?

>
> The W5YI initiative, whatever it was, would have been an FCC *proposal*.
>

True. Politics is politics though. I took it that you were just plain opposed to an attempt to campaign (harrass as you called it). So, you're right...the W5YI whatever was, I believe, something to do with a request from the FCC. Like I said, I was just getting my license, and the very first time I turned my brand new handie-talkie on, there was an on-the-air club meeting discussing how bad, bad, bad this person was and it was imperative that each and everyone write the FCC *and* copy him. Like I said, politics is politics.

>
> W3XO did not have an FCC proposal on the table, he simply made a public
> *comment* on a proposal in front of the FCC.
>

Well, I wouldn't know. I simply wonder why it's not OK to campaign. Maybe the behest (if there was such a thing) to send comments to W3XO was to help him/her(?) understand that their opinion was not a popular or favorable one. Not that it would matter to this person--maybe they wouldn't care. But, *if* they were expressing what they thought was a popular opinion, maybe it's a good thing to let them know that, hey, it maybe isn't as popular as

they think. Hey, people feel compelled all the time to make comments to me about what a dumb ham I am, eh?

>
> Do you seriously expect the ARRL not to comment on a proposed rule for
> Part 97???
>

This wasn't necessarily the ARRL doing anything--as I stated. It was, however, an on-the-air mudslinging event, possibly inspired by the desire of the ARRL to undertake a campaign to diminish the possibility of success for W5YI.

However, without truly understanding what it was that was in question, I would be remiss to comment further. Suffice it to say that I see nothing wrong with responding to someone who makes public comment in a public forum. Really. Isn't that one of the "risks" of public forums--even such as this one here? I also think your equating it to harrassment (unless it truly was harrassment--calling someone on the phone at all hours of the day, bothering them at their place of work, disrupting their private life, etc.) is a lot harsh (I started to say a little...but it's a lot).

>

In order? Heck, what was first :o Yeah, they're all pretty darned
antiquated, too. I should have defined antiquated. Antiquated in terms of
other modes that are more handy, just as favorable to band conditions, etc.

And, that would have, what? Been bad? Who cared whether you became a CW
operator? I learned CW to pass a test. Dropped it right after the test.
So, you were encouraged by learning for a test and I was discouraged by
learning it for a test. With just the two of us, that's 50/50 odds.

>
> although I'm not saying it's impossible that
> I could have in the absence of the requirement.
>

I think CW is "miraculous" enough and fun enough for people who like it,
that those who are inclined to use it in the longrun don't need to be
encouraged by having to learn it for a test. I wasn't tested for APRS or
packet, but I've tried both. Can't stand packet and dig playing with APRS.
I wasn't tested for PSK31, watched my husband doing it one night, shook my
head in bafflement and never will try it.

>

>
> 73 de Larry, K3LT
>

Your unintended consequence there is that you seem to think that everyone
and anyone else must have the same experience as you. Or, that those who
don't are somehow much lesser a person than you. You can wish forever that
someone would experience your life, Larry, because you think it is so

wonderful. While you are wishing, you may completely miss the beauty of their life. I am so tickled just to get someone on the air and into ham radio that I couldn't care less if they ever even hear of CW.

Well I never heard of FISTS nor ARRL precluding anyone from
membeship on philosophical grounds. When they ante up that's
considered prima facie evidence. NCI is a "different" sort of
organization with "different" kind of members anyway.

Wrong show. Alex Terbec hosts "Jeopardy." Pat Sajac is the one who dispenses the vowels, with the assistance of Vanna White, on "Wheel of Fortune."

<seventythree@eightyeight.net> writes:

>Larry: I've never seen anyone "whining" about CW.

Kim:

You may not have "seen" it, but I hear it all the time. Most recently,
at our local radio club meeting last Tuesday, when our Section
Manager made one of his infrequent visits, and during the Q&A
period, some big, fat, stupid looking idiot chimes up with the
inevitable "When are they going get rid of the code?" Needless
to say, after Randy fed us the usually politically-correct ARRL
boilerplate tripe about all the "good people" that came into the
ARS with the No-code Tech etc. etc, I proceeded to explain to
them how the reduction of code testing doesn't seem to have
had the promised effect of creating the "digital paradise" that was
promised so clearly and specifically by ARRL officials ever since
the St. Valentine's Day massacre of the ARS in 1991 -- especially
since all the talk now is about "refarming" the former Novice/Tech
segments to expand voice mode bandwidth.

>I've seen debates on both
>sides happen, seen people argue and nearly stomp each other over the
>issue--but I've never seen anyone whine. Unless you call the statement "I
>don't like CW and don't want to use it" whining.
>
>I don't.

Of course not, since you're one of the whiners.

>And, maybe they don't *WANT* to be contest-grade CW operators, Larry.

You forgot the "So there, nyaa naya!" and the "sticking your tongue out"
emoticon, :-P.

>Chicken Little routine.

Well, if Art ever invited me to "The Kingdon of Nigh" to be a guest on
his show, I'd be quite honored to explain my views on the future of
ham radio, with respect to code testing and other policy issues.
However, even though I live in Delaware, I'm a transplant, not a native --
so I'd probably not be the one to do any kind of a chicken impersonation.
For that, he'd need someone born and raised in Sussex county,
where chickens outnumber people several times over.

I don't think I have to. After S25.5 goes away, the (then) former
NCTA's will most likely go into that mode on their own. Then I
guess they'll be "No Written Test Agenda" -- although I'd prefer
a label that fit the acronym NITWITS. And since I don't do
"smileys," I'll throw in a <BSEG>.

I don't, because to a person, everyone I've heard say this has YET
to bother to get involved in learning the code -- even though they only
have to pass 5 WPM to get up to Extra-class HF privileges! They
still figure that a couple more years of whining will make it go away
completely, and they may be right.

>> As in anything else, what they do once

Well, as already stated, I don't see ANY part of the testing regimen
to be capable of "filtering" out potentially bad operators. However, to
whatever extent it does, I'm glad that we derive that secondary benefit.

>Kim W5TIT

Kim:

You may have accidentally stumbled on a good point. Commercial
communications technologies have made what even the most advanced
hams can do seem quite "old hat" by comparison to the most
basic cell phone, not to mention broadband wireless voice/data
digital services which are becoming ever more ubiquitous. From a
strictly technological standpoint, about the only thing hams are doing
that stands out would be the more arcane modes like Moonbounce --
but that is hardly a mode which provides viable and reliable
communications capability.

Hams are at the point now where the best we can hope for is to be
accepted as a "backup" communications service, and I believe we have
a proven and vital role to serve in that capacity. However, in order to
be the most capable "backup" operators we an be, we need to
maintain a solid grounding in the very essential basics of radio
communication, including the Morse code. Bringing in a lot more
technically uninvolved button-pushing appliance operators, who
possess no operating skills other than the ability to speak somewhat
clearly into a microphone, is not going to solidify our place in the
public's mind with regard to our REAL backup capability. Yakking
into an HT just doesn't impress anyone anymore, nor should it.
The last time I sat at the operator's position of our radio club's
station at the county EOC, the county's Emergency Operations
Director was more impressed with my ability to copy a W1AW
CW bulletin, than with the PTT skills of the No-code tech sitting
next to me, clutching the mic of the 2-meter rig for dear life.

Not hardly, Cecil. It is a common understanding among PCTA's
that anyone with the requisite initiative can learn and become
proficient in the Morse code. The Emergency Communicator
Ham Heroes are not nearly so "inclusive" in their attitude toward
newcomers.

>73,
>Ed Hare, W1RFI

Nothing like that, Ed -- just personal experience. An experience imposed on me mainly by what were then mainly Technician-class "emergency" communicators. You know, the ones who squeeked thru a 5 WPM code test somehow, then proceeded to view themselves as capable of saving the world on 2-meters FM. And my bad experiences in this area began long before I entered the Code/No-code (testing) debate on Fidonet, and later, on Usenet.

BTW -- another Extra-class ham has just posted a message on the FISTS reflector saying, in effect, "Real radio men know the Morse code." Are you going to go there and set him straight? Or is your politically-correct support of the new, dumbed-down ARS strictly reserved for this newsgroup?

>;-)

Okay, let's get you started on transistors, then. You've avoided the obvious by not mentioning a 2N2222 or 2N3904. Do you know the difference? How about between a 2N2218 or a 2N3905? Or 2N3906? Or 2N4124 or 2N4125?

What should you add to such a circuit to keep it working and why?

>>Dick won't say what he did so I have no way of knowing whether
>>he designed anything or not.
>
>He described at least one project that I know of. There are probably lots
>more. From his description of his pair of 813s amplifier I would say some
fairly
>serious RF design took place. Also power supply and control circuit design,
>mechanical design and layout, fabrication, and testing.

Claims are not verification, only claims. There have been dozens of 813 finals in amateur literature, many more on the 807-1625 and the 829...and power supplies for all of them. Final amplifiers in HF are not the sum total and ending
of amateur radio design.

"Serious" would imply load-line charting, tests with various impedances (high to accommodate the tube prior to working out the output network). "Serious" implies checking for parasitic oscillations, observation of RF envelopes during keying, checking rise and fall times, and understanding the why and what-happens with all of them.
"Serious" would imply at least some sort of spectrum analysis (even if

only listening-observing with a highly-attenuated receiver).
"Serious" must include checking for spurious and harmonic output to
ascertain that the amplifier follows FCC regulations.
"Serious" would include knowing how to fix/re-design if the performance
did not meet FCC standards.

>> I assume he copied circuits designed by others.
>
>Not a good assumption. And there's a lot more to designing a rig than the

>To a biased judge, maybe. JC didn't defend himself.

The reference to "JC" is rather out of place, isn't it? Is electronics design
somehow theological or supernatural?

Are you Judas Escargot? :-)

>>> That you have not found them does not mean they do not exist.
>>
>>Well, that's true and is the reason that patent lawyers do patent searches.
>
>You gonna patent it?

Is the divine JM aware of the approximate full price of a single electronics
patent these days? Unless someone can do their own patent search for
the full disclosure a Search firm must be hired. The total patent applicant's
cost was in the neighborhood of $6000 to $8000 US two years ago
according to a certified patent attorney out here who makes his living in
such law.

>>Do you know of any two-component systems that automatically key the IC-706

>
>Nope. Yours uses at least three components.
>
>You coulda used an optoisolator and eliminated the mechanical relay, too. As
>much as I like relays, the cheap ones can be trouble.

Does the divine JM consider himself the Design Review Leader now?

If so, he must present his case of negative reviews of another's personal efforts
in clear electronics terms considering all factors of why this particular effort is "unsuitable." Show the work, JM, assumptions are invalid anywhere else.

This non-review by JM is simply a personal negative of no valid electronic signifcance except to attempt putting another down for his expressed personal viewpoints on an unrelated matter. This violates Rules Three and Four in the Amateur's Code.

I don't understand. Are not the Directors elected by secret ballot of the
members?
Can a Director not be recalled or not reelected?

I've been vpoting in every Director election for my region since 1968. ARRL
sends me the ballot and I fill it out and send it back. I kinda think they
count 'em.
They're independently audited, too.

>facet that comes under their charter.

The CSVHS thing had nothing to do with code testing.

>If bandplans are in some way affected
>by CW policy decisions, then it would be irresponsible of NCI to ignore the
>matter.

Here's the simple facts:

1) There is no code test for access to ALL US amateur privileges above 30 MHz.
2) Except for 50.0 to 50.1 and 144.0 to 144.1, which are CW only, and the
data-only segment 218-219, all authorized modes may be used on all
authorized amateur VHF-UHF frequencies.
3) Use of these bands by mode is mostly by voluntary bandplan
4) CSVHS members and others have experienced interference from other hams
operating in violation of the bandplan. Specifically, FM users operating
simplex
on frequencies normally used for weak-signal SSB and CW.
5) The CSVHS petition was to set aside BY LAW 300 kHz of 2 meters and
similar amounts of 6 meters and 70 cm for narrowband modes. Specifically,
modes less than 3 kHZ wide - SSB, PSK31, CW, Pactor, etc. The current CW
only segments would disappear.

Now I ask you - what does any of the above have to do with code testing? How
does it come under NCI's "charter" to oppose the CSVHS proposal?

If made into law, how would the CSVHS proposal have affected license testing in
any way other than to change a question or two in the written test?

You previously said something about "bandplans schmandplans - put some meat
on the thing" or some such. That's EXACTLY what CSVHS tried to do.

Please explain how NCI's "charter" authorizes it to get involved in opposing
something like the CSVHS proposal, which has nothing to do with code testing.

>Thanks for your help
> Dave kb9iig

Dave:

What the FCC is looking at is authorizing voice modes on parts of
what are now the Novice/Tech-plus CW/digital allocations. If this
happens, would lose some CW bandwidth, but so would everyone
else. When you upgrade, you still retain the privileges you have as a
Tech plus, until that change takes place, if it does. All current
licensees are "grandfathered" into their existing privilege levels,
nothing is ever lost when upgrading. Since you would not have
to take any more code tests, you may as well just study some
more and go for your Extra. They're giving it away these days.

From: Birdman67 <Birdman67@wi.rr.com>
Message-ID: <v7oc8.2431$kq1.474327@twister.rdc-kc.rr.com>
Source record: 35446

Let me first say "thank you" to all the volunteer observers who take take their time and effort to keep the ham bands a self policing entity and as good as they are.

Keep up the good work.

Second, I received a notice that I did not ID for 40 min during a QSO. I don't doubt it is true. I was wondering why the observer did not let me know after say 20 or 25 minutes that I needed to ID, Does the word "observer" mean just that he/she observes but does not participate. Why did the ham operator allow a rule that was obviously being broken continue to be broken. I have noticed that I have paid more attention to my IDing practices since I received the notice but, I think I still would be paying just as much attention if I received a note for not IDing after 25 min. I am not angry, however, and have no ill will against the observer.

Third, I would be very happy to get any information on being a observer. I have much time on my hands and would consider "offering" my time and service to help the hobby. I have had my ticket for 9 years and am a tec+.

Do you have to "know some one" or be friends with the "right people".
Do you have to be appointed.
Do you have to be an amateur extra.
Is offering you time and service enughf to be considered.
Do you pay your own postage on notices.
Is there a good web page to go to.
How much paper work is involved ETC....

Finally, Thanks again to all the volunteer observers. You are all doing a GREAT job. I wold be proud to join your ranks.

Don't listen to Larry. He has some inner need to see the accomplishments of new hams as inferior to his own. He starts with the tests and goes downhill from there.

He is right that you may as well shoot for your Extra, though. The things you will learn to take the exam open up a lifetime of learning.

That makes no sense, Kim. Don't rely on something even though it is reliable?

I'm not just talking about CW here, but about how to make choices in general.
If a mode "gets through" more of the time, it makes sense to rely on it more
than a mode that doesn't.

For example, suppose I want to have reliable communications from EPA to SF.
Depending on time of day and sunspot count, the bands between 40 and 15 meters
are the most reliable. But by your logic, those bands should not be relied upon
more
than, say, 6 meters, because there are times when 6 meters will do the job.
Huh??

>> >No mode should be "favored" over another for

What you need to do is filter and bypass the junctions for RF. Also install a
bridge of diodes for the opto because the motor polarity reverses. Then wire
the whole thing with shielded leads and mount on a double layer PC board in
a metal box. Maybe a time delay and sequencing circuit - good job for a PIC,
doncha think?

Component count? Who cares, we're talking cutting edge control circuits here.
We can't be stuck in the past.

After all, relays are OLD technology. Older than vacuum tubes, even. Slow, antiquated, expensive, outmoded, replaced by commercial and military users in all but a few applications. Legacy technology. They go back at least as far as Morse's original telegraph! In an emergency you might be tempted to tear off the
cover and use the relay to send code!

Now, if that observation doesn't demonstrate that the present FCC rules are
really not adequate, nothing does.

If any limitation is needed, it should be bandwidth alone, IMHO.

Probably five transmitters and two regen receivers. I never got a superhet
to work right. The mixers didn't mix very well.

> What you need to do is filter and bypass the junctions for RF.

It would be more trouble than it's worth. The power wires to the screwdriver
motor are loaded with RF. One relay is a lot cheaper than all that RF filtering.

> and context under which the statement was made.

Readers of r.r.a.p can join the group at any time, Dick. In
order to avoid uttering falsehoods that newcomers might believe,
what is wrong with keeping the statements true by adding one
small four-letter qualifying word like "often"?

CW often gets through when SSB fails to get through.

That's a true statement and doesn't convey supernatural
powers to CW like your other statement does. For instance,
working Houston on 10m CW from my QTH is close to impossible.

>The only reason to be a non-
>voting member in any organization is ego boost.

An answer I would expect ONLY from you.....

Use of ARRL membership services...

Support of ARRL programs....

QST and QEX subscriptions...

ARRL insurance for radios...

>I am not sheep and
>you are not a salesman, nor are you good at misdirection of
>a thread.

Ed...how could you have made this mistake?...Lennie the Creep is always trying to get your GOAT...not SHEEP.

And Lennie is correct...YOU have no problem allegedly misdirecting threads...He does that ALL himself.

>Would I get a free t-shirt for joining the ARRL as a NON-VOTING
>member?

No free shirt...but they DO have other occassional promotional items. And no license required...

>The RCA (not, never a
>part of the former RCA Corporation) is interested in ALL radio,
>not the subset of radio enjoyed by amateur hobbyists.

Which has WHAT to do with the ARRL? If you want a "one size fit's all" club, go there. That's not what ARRL is about, now, but then you knew that......

>For some slight misdirection, allow me to mention another
>hobbyist organization, the Academy of Model Aeronautics.

Rest of interesting parallels beteween ARRL and AMA snipped due to thier complete irrelevence in Amateur Radio matters. But thanks. I am sure it kept you from drooling in your pablum for a while.

>The outstanding difference between the two organizations is
>that the AMA doesn't go into self-patronizing flag-waving of how "good and
important they are for the country and national defense-safety"....(BIG SNIP)

Could that be because there is NO mandate for them to do so in codified
federal regulations? You are again redirected to the Basis and Purpose of the
Amateur Radio Service, Your Putziness.

Could it be because that those models are STRICTLY for entertainment?

Could it be because those models are useless to anyone more than a mile or
so from the person controlling them?

>I am fully qualified (perhaps overly so compared to present
>company)...

What were the words uttered by one Leonard H. Anderson about
"self-patronizing"...?!?!

>I am fully qualified though slightly out of practice to design,
>build, test, and fly a model aircraft under 55 pounds in
>weight and, like all, subject to local FAA flying rules near
>airways and airports.

Have fun with your models...Not nearly as fun as the Skylane I
fly...Uh...It's a "bit" over 55 pounds and flies a bit faster! Oh yeah...got
the pilot's license for THAT too, Lennie.

>I don't need to learn morse code to be
>evidenciary of a "vital necessity skill" mode for R/C model
>flying nor even take any federal tests for same.

Nor do any of the other 169,999 members of AMA who fly RC, nor any of the
persons licensed by Part 97 who elect to operate RC..Your point was...???

>...nor do I have
>to adopt a fraternal order mind-set that embraces gratuitous
>lodge-hall self-promotion as a lifestyle.

No...you simply lie and decieve...or ATTEMPT to decieve, anyway...you're
not really very good at covering your tracks with YOUR "misdirections", now are
you?

>In all honesty, which membership do you think is the most
>attractive to the public?

Well now...a RATIONAL mind would ask "Guess it depends if I wanted to be a
Ham Radio Operator or just fly model aircraft, now doesn't it, Spunky...?!?!"

>a winner in the 1948 Plymouth Internationals, Detroit, MI

And not a wit's worth of maturity nor civility since.....

Once again, the use of neo-Nazi analogies noted. Unable to suppress the
truth that he has, again, been caught lying causes him great consternation.

By the way..."what" is suppressed? Your bile flows freely despite reams
of bandwidth expended disproving your allegations and insults. And by more
persons than just "me".

>Ordinarily, I reject Robeson's messages and do not reply to those
>who have such a deep personal mental aberration that they must
>confront and attack any posting of another just for the sake of
>confrontation and attack.

"Thug" "Nazi" "Jackboot" "Elitist".....

You started it, Lennie...Do a Gogglesearch on that.

>All of those applications and direct correspondence
>with NCI are not on any public record or archive.

Of course...very convienient.

>In a later public posting in this chat room, I mentioned this to Carl
>Stevenson. He informed me that NCI membership rules "had been
>changed" and that I was now (at that time) "eligible for member-
>ship." I answered that posting saying that I had no further desire
>to apply for any NCI membership but that I supported their position.

I tend to believe that it was due to thier desire to distance themselves
from someone known to be as undesireable and unreliable as you, Lennie.

Can't say I blame them. Your existence is one of mediocrity and failures.
Your retirement one of insignificance and antagonism.

Who'd want you?

>In a
>lengthy and unneccessary series of newsgroup messages, Robeson
>insisted later that my Reply to Comments was "15 pages" instead
>of 14 due to the FCC recorder including that cover letter as part of
>my submitted document.

Lennie..15 pages were catologued by the FCC. You can try to find some
"technicality" to argue, but it's all pretty childish.

>Clearly that indicated Robeson had no wish to
>discuss anything, just attack, fight, destroy another he did not
>like. His manner to some others in this newsgroup is consistent
>with that. No discussion on subjects, just attempts at
>subjugation through personal attack.

"Thug" "Nazi" "Jackboot" "Elitist"

Yep...Your words...Now you were accusing WHO of "subjugation through
personal attacks"...?!?!

>However, Robeson uses them rather
>clearly in a personal-attack mode against another. Those reasons
>might be:

Hmmmm....Lennie must took a "psych" course in his fourteen years of night
school to get that four year degree......

>1. He was once caught lying in the past and this has left an
> indelible spot on his psyche,....(SNIP)

Nope. I have been wrong in this forum, but have not intentionally misled,
which is what a lie is....You know, Lennie...like YOUR stuff.

>2. Beliefs and Truth have been fused in his own perception so that anything
against his personal Belief-set is therefore untrue.

Nope. Untruthful statements made BY YOU and, as you have noted. verifyed
by disinterested parties.

>This has been seen in others in this newsgroup. This seems popular with
ex-military types.

Yep..it does..."Sarge"...ex-Army radio-God of the 1950's .

>3. The control-freak cum bully mind-set. Domination of everything is their
control.

"Thug" "Nazi" "Jackboot" "Elitist"

Yep...You're right...And you have demonstrated it consistently.

>They cannot fit into an environment so they seek to
> change an environment to something they can handle by any
> means possible.

Curious comment coming from a loser who haunts a Ham Radio newsgroup, who
is not himself a licnesee, yet feels compelled to force his "opinions" on all
comers as "the" correct way to be.

>Such cannot compromise, cannot accept any condition but their own.

Evidence "NoCWTest" "Lenover21" "Lenof21" "AveryFine", et all in his
numerous nomme de guerre.

>4. Frustration at failing to achieve certain things in life, anything from
> education to occupation to avocation to choice of mate, or to find

> out that there is no guarantee in life that they are owed good things
> just because they exist.

Hmmmmmm....I am not first cousin to Ross Perot, nor am I Brittaney Spear's personal nurse...so I guess there are some failures there...

Otherwise I'd have to say that, all things considered, I have accomplished more than Lennie could ever hope to do.

The simple fact that more than one human being is still alive and well as a result of MY life's choices is more rewarding than an Amateur Radio license could hope to provide...But since I DO have that TOO, I guess it's a pretty sweet deal!

>A psychological survival tactic is to
> demean those who have achieved things, denigrate accomplishments,
> to elevate their own accomplishments far above anyone else's.

You do a good job all on your own, Lennie.

You just don't get it that YOU are the source of all those things that you consider "denigrat(ing)". You ARE your own worst enemy. You just fail to accept it.

>That stand-alone sentence is another in a series of Big Lie technique
>statements made by Robeson.

I see you didn't answer it. I didn't expect you would. It is not a lie. It is a question based upon YOUR demonstrated misdeeds.

You need not respond. WE (yes, WE) know the answer.

>He is expressing denial that others
>have done things before his time, of greater difficulty or greater
>accomplishments than his.

Part of your own "Big Lie" syndrome, Lennie. I have, as countless others in this forum can attest, have acknowledged your (apparent) knowledge of radio theory and application.

What I ALSO assert is that YOU have NO practical experience in Amateur Radio. Your own posts support that. It is not a lie or untruthful.

>Rather than learn from older person's experiences he wishes to
>subjugate them, to forbid them doing anything in "his" territory.
>Robeson has previously demanded "learning" such as in microwave
>theory and techniques, for free.

Within the past 96 hours, you have posted no less than 20 pages of text on historical matters tha had no relevence to on-going threads.

You have repeatedly (as the above paragraph attests) made reference to your own alleged technical prowess, suggesting that someone might have something to LEARN from you.

I intentionally put myself in the position of "pupil" with you as "teacher".

It was a roll you were not up to. Incapable. Unprepared.

>That may be
>ignorance on his part but it is always perceived as supremely
>arrogant in demanding free instruction just because he asked for it!

I am sure you think so. Pretty embarrasing for you, I imagine...Being asked to actually DO the things you assert you can by the person you least expect it from.

But your "response" was exactly what I anticipated.
"Nothing"..Well...Nothing but excuses, to be exact.

>The charges of "lying" have been refuted.

"Refuted"...?!?! Hardly. An obfuscation, at best, on your part.

>To verify, one need only to do a FULL access to the appropriate
>subjects at Google archives and/or consult the FCC full public
>document record on NPRM 98-143.

And look for the above mentioned screen names of Leonard H. Anderson, used to dilute his bile.

>This discussion is closed.

There's no discussion. There never was. You lie. You berate. You villify and denigrate.

THOSE are facts.

Now run along...Mrs A is getting her neo-Nazi leatehrs out for you....You've been a baaaaaaad boy...

Again.

Steve

Go back and retake Reading Comprehension 101. It's the jokers
like you who constantly insist that CW is too old and antiquated
to be useful for anything but a "novelty" and that anyone who
insists otherwise is a dinosaur and Luddite. Meanwhile us PCTAs
are the ones who are actually on the air with the latest digital modes.
What's strange is how they come to their idiotic conclusions while
*we8 insist that CW is one mode among many, but one we need to keep, and the ONLY
one that
requires a ham to actually cause HIMSELF to do what is necessary
to learn how to use it. Their refusal to do that speaks volumes
about their lack of interest in and value to the hobby.
If it was a problem of understanding that can be solved. But in the cases
we see here that clearly is not so.

Better yet:

In each HF/MF ham band have a subband for CW, a subband for "digital"
(data, voice, image, whatever), and a subband for analog voice/image
(SSB, AM, NBFM,
etc.). CW still allowed almost everywhere but discouraged outside the
CW
subband for routine work. Contest rules state "all contacts must be
made inside
the CW subband" or some such. Digital modes typically cluster by
bandwidth -
narrow modes like PSK31 at the bottom end, wide modes like some
digital voice
systems at the top end.

If 40 meters gets straightened out at WRC 2003 the subbands could be
world wide.

Carl Stevenson and Bill Sohl went to DC and made their own
ex parte presentation to the FCC on 98-143. That's public
record, can't be "overlooked."

"Code supporters." Are they some sort of athletic clothing
article used in radio-sport "athletics?" "One size fits all" is not
a correct phrase and does not fit.

>Nope. I mean where you won't even look at information presented to you.

"Information presented" is not a universal truism just because it exists.
Many,
many, many people have looked at the PCTA "information presented" and
disagree with it.

Disagreement with PCTA personal views is not against religion, politics, or
anything else. Disagreement is not heresy nor do the PCTA have any "lock"
on "what is good for everyone" yet so many of them insist they do...

>>2. Applications for membership or renewal of membership shall be submitted
>>to the Secretary. In the case of any applicant whose character, reputation
>>or conduct might make him an undesirable member, the Secretary shall refer
>>the application to the Executive Committee for review; in all other cases,
>>the Secretary shall have the authority to grant membership.
>
>Nope. Standard boilerplate membership stuff. Without it, an organization has
>no mechanism to kick out anyone who pays the dues.

So, selective membership and adherence to the Party Line is well and good if explained differently? There is much disagreement among the non-PCTA folk.

NCI does not have dues, does not claim to represent "all" of amateur radio.

>It behooves anyone who wants to join a group to make themselves "desirable"
>to that group.

It "behooves" a group to dictate the Party Line to the faithful in order to maintain
order and control as exercised by a minority leadership in a membership organization that does not represent a majority of licensed amateurs.

That is essential to survival of the group.

>>By the way, the caveat of those elected Directors is that there is little
>>accountability at that level.
>>
>I don't understand. Are not the Directors elected by secret ballot of the
>members? Can a Director not be recalled or not reelected?

This is a standard boilerplate statement by the party faithful. It attempts to wrap the flag of American democratic principles around its own as if voting within the group is "exactly" like that of US governmental elections which are required by law to have election overseers (who may be of an opposite party). The ARRL is a private organization and is NOT bound by any election laws, only those laws which pertain to non-profit groups for tax revenue and real ownership legal purposes.

>I've been vpoting in every Director election for my region since 1968. ARRL
>sends me the ballot and I fill it out and send it back. I kinda think they
>count 'em. They're independently audited, too.

Two words: Arthur Andersen.

There is NO assurance whatsoever that such voting is aboveboard, only the statements by the ARRL that "everything is honest." ALL assurances come from the ARRL. The faithful MUST believe for they have NO other way to check on the veracity, the validity of claims.

There is not General Accounting Office, no Registrar of Voters, no Election Monitoring agency or equivalent name that is present with government elections. The only "overseer" of ARRL election results is a private organization auditor.

>What part is not correct? Isn't NCI's sole purpose to end all code testing
>for ham licenses? That's what they keep saying.

What part of that does N2EY not understand?

>> However, your
>>mileage may vary. I would expect any organization to get involved with any
>>facet that comes under their charter.
>

>The CSVHS thing had nothing to do with code testing.

Many, many, many efforts of the ARRL may be interpreted as "stepping out of their representative role for amateur radio" when it speaks against OTHER radio services. Why is that considered "good and acceptible" yet becomes "bad and inappropriate" when another organization does it?

The ARRL makes a blanket statement of "representing amateur radio." That is clear, repeated, has been repeated for years.

Equally clear is that the membership in the ARRL has remained a MINORITY of all licensed radio amateurs in the USA for years.

Why does this MINORITY insist on ruling or "knowing what is best for the MAJORITY of amateurs who are not members?"

>Here's the simple facts:

NOT "all of the simple facts."

The simplest fact is simply that the ARRL does NOT represent a majority of licensed radio amateurs in the USA yet it claims to know what is "best for ALL."

>Please explain how NCI's "charter" authorizes it to get involved in opposing
>something like the CSVHS proposal, which has nothing to do with code testing.

Explain how the ARRL is "authorized" in ANY representation of US amateur radio, on ANY federal radio regulation matter, especially involving other radio services.

Explain how the ARRL is "authorized" to implicitly rule on the "necessity" of newcomers' knowledge, skills, and ability in radio to GET INTO amateur radio? THE ARRL DOES NOT REPRESENT THE UNLICENSED-IN-AMATEUR-RADIO, never has, yet it claims to "set standards" for entrance.

ALL of the "authorization" of the ARRL is really an egregious group of claims of a MINORITY who have conferred "nobility" on themselves to "rule" over others.

Now show your "authorization" for your own nobility and righteousness.

Actually, either the relay is silent or I'm deaf. The IC-706 sidetone comes
on when the relay is energized.

> Sorry if it wasn't clear that my comments on relays were tongue-in-cheek.

It was pretty clear and I decided to play along. But please note there is no
mandatory skill testing on the use of relays.

I'm a newcomer to the Extra class, Dick, and you have certainly insulted
me and made me feel unwelcome. Those three guys may need to use CW for
something one of these days. Let's say one of their scheds fail on SSB.
It's logical to switch over to CW on the calling frequency since digital
is illegal on voice bands.

Which is a good thing.

> But to the original "concept"...the Russians
> wanted the code test because (I guess) many
> Russians only had code capability. Nothing,
> however, mandates anyone speak or know
> Russian.

I kinda suspect that the Russians require that anybody who wants a Russian
license (except for reciprocals) be able to use Russian, same as the FCC
effectively requires ability to use English.

While Morse helps break down language barriers, and has some "language-like"
characteristics, it's clearly not a "universal language".

Do the Russians really want to keep the code test? I don't know.

Maybe it's just a bargaining chip for them, to get something else
they really want, which might not even have anything to do with
amateur radio.

Maybe they really do want to keep it, for any of a variety of reasons.
Either way, will they have enough votes to make any difference? I
sincerely doubt it.

It would seem that someone lobbying for change shows more interest in the
value of the hobby than someone who would rather walk away and might say,
"Hams still using morse code? To hell with that. I'll find another hobby."

I just have one simple question. I hope somebody can help me out because I'm very confused. I received my Tech (no code) class license Dec, 1993. I upgraded to Tech Plus in May ,1995. If I upgrade to General now, do I have to retake the 5 wpm code test or just take the new element 3 test? The way I understand it, I just have to take the new element 3 test because I passed the code test before April 15, 2000 - but I'm not sure.

Thanks,
Mike

All you need is Element 3. If you do not try 4 on the same fee, you are a
fool.

Come prepared with both the original and photocopy of your ticket.

5105. Testing in Languages other than English (was Re: Would Morse Code die without the testing requirement?)

Newsgroup: rec.radio.amateur.policy
Date: 2002-02-19 23:47:11 UTC

Source record: 34564

I went to the source and ask the ARRL VEC if it was legal for VE teams to translate the pools into languages other than English and give applicants tests in those languages.

Here is Bart Jahnke's explanation:

> FCC allows it, so long as all three VEs are fully fluent in that language,
> and so long as their coordinating VEC agrees to coordinate the examination
> in a language other than English.
>
> ARRL established an ARRL VEC policy some ten plus years ago that we would

Actually, Dick, I drew that conclusion from the discussion I had with you over your use of the term "dictate." When pressed as to how someone without any authority whatsover could be a dictator, you cited his attempts to influence the FCC as the reason for your choice of the word "dictate."

It wasn't Carl's diatribe at all, Dick; you are foist on your own petard on this one.

I don't think anyone would be offput by knowing that hams still use Morse code.
I think it important that they realize that hams do more than use Morse code
and that the license opens them up to experiment with nearly any mode they
please, at least on some frequencies.

That was the FCC's position on the only non-Rnglish commercial
exam. The Commercial Element One and Two exam for the Marine
Third Class Radiotelephone Operator Permit (minimum required by law
for safety purposes on certain classes of vessels) was given in
Spanish only in Puerto Rico and such licenses carried a restrictive
endorsement making them valid only on Caribbean waters.

Well, send it in, then, Larry. Quit your whining and do something about it.
You claim all these other people are whining and the only whining I've ever
seen is coming from you. It also seems to me that a long-time ham worth his
salt would have been through so much experience that reading "sloppy" CW
would come as second nature. After all, seems like any good ham worth his
salt would get on the air with the sloppy fist and give some pointers for
correction. Sorry you don't feel up to the challenge...we know how much
easier it is for you to whine and condemn.

And I am pretty sure you are wrong. More hams who bring a mix of interests to the hobby of the ARS and begin weaving their experimentation with all of them is what will keep the ARS in some way viable. By the way, those who wish to do nothing but pick up the microphone are probably a vast minority when it compares to the number of people who see the ARS as an exciting laboratory for experimentation with internet/wireless and other endless new technologies.

Hmmm, no, you must have read backwards, Little Dick--and of course that is no surprise. While the very first brand new car I ever bought all by myself was a Yugo (that ran perfectly fine the two years I had it), I would not choose a Yugo...neither then nor today. I don't think they were reliable at all for a good run; nor would the availability of parts or mechanics be all that common (though the Yugo was quite a simple car to work on--they had the Fiat 128 engine in them by the way).

Mercedes? Hell no. I'd not choose them and if you're implying you would your showing some true ignorance in this context. In this context, for the reliability, availability of parts and more frequently found mechanics who would be able to repair, I'd probably pick a Ford or *maybe* a Buick. Ford first, Buick second.

>(data, voice, image, whatever), and a subband for analog voice/image
>(SSB, AM, NBFM,
>etc.).

I can see reasons to segregate modes like that, but OTOH, having an open allocation of spectrum allows the use of the bands to adjust dynamically. On a CW-test weekend, CW can go as far "up" the band as it needs to to accomodate the nubmer of users; the converse is true on 'phone or digital 'test weekends. For the most part, it seems to work okay in those countries that don't have mode allocations. I rarely hear Canadians or Europeans below 7040 kHz or so, except during major phone contests.

I don't care either way, but I would imagine that the mode that can get through when others fail would be able to get through even better when others are getting through, too. :-)

more
> than a mode that doesn't.
>

Well, I am taling *only* about CW here.

It makes little sense to rely on a reliable mode just for the sake of its reliability. The fact that you are all missing in your haste to misunderstand what i am saying is this: the reliability of a mode does little if the mode is little understood.

> For example, suppose I want to have reliable communications from EPA to SF.
> Depending on time of day and sunspot count, the bands between 40 and 15 meters
> are the most reliable. But by your logic, those bands should not be relied upon
> more
> than, say, 6 meters, because there are times when 6 meters will do the job.
> Huh??
>

Because my logic says that if I am going to make more contacts, I will make more contacts via other modes that are more commonly understood. It's great that you, a CW operator, have the CW mode to rely on...all the time. Many, many hams do not. Because of the current state of affairs--that of perhaps not that many skilled CW operators any more--I would be least inclined to rely on CW as a mode in disaster communications. Sorry, but that's the way I feel about it. I may very well be wrong in my assessment. But, I don't believe there are as many hams, or people in general, who would hear a CW signal and understand it, as there would be hams who will hear or see almost any other mode and understand it.

> >> >
> >> >No mode should be "favored" over another for
> >> >reliance--they all have their place.
> >>
> >> Yes, they all have their place. But it is simply illogical to say that a
> >more
> >> reliable mode should not be relied upon more than a less reliable one.
> >>

I am more going to go with the sure thing than I am something that *might* work. For every one ham that could hear and understand my CW signal, there are probably 100-150 who could hear and understand my voice signal. In precious seconds, I'd be willing to take the risk that my voice signal may be what saves a life.

I'd sacrifice mechanical reliability for more likelihood that there's someone out there who'd be around to fix it *in the event* of failure. Let's see...it's hard to equate this to automobiles because there really isn't such a rarity of people who can fix whatever make. But, let's say there was a choice between a really reliable auto, though garages are few and far between that know it well; and a not-so-reliable auto with garages that know it well are quite common. I'm banking on the likelihood that, knowing my luck, either auto is going to break down. I am going to go with the auto most likely to get repaired.

OH!!!! Forgot to say, and that's why I also have a CB in my auto. I'm more
likely to get ahold of someone on CB than by CW, 2M, 70cm, or HF any day...
The person may not be the most desirable, but then some hams I know aren't
so desirable either :o

I didn't quite get the connection either, Larry. I lived in a Wisconsin
county that was even a Metropolitan Statistical Area where the Holsteins
outnumbered the humans and live in a state today where things that moo
outnumber the two-legged population several-fold. So what?

Maybe that is why I am so sensitive to bullshit.

A good analogy might be that the stick shift vehicle is more reliable but
you don't know how to drive it.

Exactly! I personally prefer a standard over an automatic transmission,
especially with Pittsburgh's winters. I don't, however, think that someone
should be required to show proficiency in driving a standard shift vehicle
in order to obtain a driver's license.

I noticed in the Fresno, CA newspaper a
few weeks ago a columnist
mentioned that California has a new law
that overrules CCR's which
prohibit pets. It specifically states
that a homeowner may have one
pet regardless of CCR's which prohibit
pets.

Isn't that neat? Fido and Kitty get a
pass while hams get no antennas
with which to conduct emergency
communications for the public good.
Something's wrong with this scene....

You didn't say that he was trying to dictate, Dick; you said that he was dictating to the FCC and the ARRL. I disagreed that someone who has absolutely no authority can be a dictator. You argued for a while, but I can infer from the rewrite of your statement you made above by adding "try" as a qualifier, that you now agree with me.

Some organizations have permanent memberships (QRP ARCI, NCI), but retain an
active membership for those whose dues are paid up. I have been QRP ARCI member
5860 for a long time, but I let it lapse for so long that they couldn't even
find the records that showed I ever WAS a member. :-) They took me at my word
and reissued the number to me.

Perhaps Dick is a lapsed FISTS member.

Try listening to the HF bands other than 10 meters when they are open and
see how much CW use there is, compared to other modes. How many hams
do you think could decode a PACTOR 2 signal?
>
>> >> >No mode should be "favored" over another for

Where do you get such numbers? The reality on HF is more like 1 in 3, not 1 in
100 or 1 in 150.

Or are you saying your CW signal would not be understandable? ;-)

>In

I think it's good news for hams.

First off, the fact that the new law came to be
means there IS a way to get such a law. We
need to find out how the pet preemption came
to be and use a similar method to get an antenna
preemption.

Second, the new law shows "reasonable
accomodation". One pet, not an unlimited
number. For hams that might mean one antenna
of reasonable size, not an unlimited right to put
up any sort of tower/antenna farm.

Third, your argument about emergency comms
is valid. If preemptions happen for pets, why not
for emergency preparedness?

I'll bet that one factor in the law getting passed
was strong support by pet owners, in the form
of letters to the appropriate legislators.

What ARRL has been asking for is an CC&R pre-emption similar in scope to that given by the FCC to broadcast reception antennas. This would certainly allow verticals, wires in trees, outdoor ground planes, VHF Yagis, etc. It might allow a small HF antenna like a Butternut beam. So far, the FCC has said no.

You've been hanging out with Cecil too long, you're getting to be the same sort
of wordmeister
Sure he can "dictate"
without authority. If he had authority we'd have to listen. That's
the scary part.

Once a FISTS member your membership doesn't expire. If you
want the monthly newsletter you pay an annual membership dues, if not you just
don't get the newsletter, you do keep the membership
and its number. (That's the way it was explained to me). I dropped
the newsletter a couple years ago.

Cecil was probably looking at a list of those who are active
subscibers to the newsletter.

I sure have, and by far the worst one was ever assumsing one could
have a calm, candid, rational conversation with the likes of Cecil
and in fact you yourself. You guys can start your own "organization"
anytime, you are more than ready. Call it NPI, Nit Pickers International. Your
motto can be "We never assume that hams of
long experience will be familiar with anything but they must give
a most complete description of every subject they address, lest
all those wellread newcomers be confused. Don't hold us to our
own standard, though".

I've never lived in a CCR restricted place but have spent considerable time visiting in them, and have been on the air many times. It's surprising what you can do with a pair of dipoles on 40 and 20 that are hung paralleled on a 6 ft wooden (or in one case concrete block) fence, especially when working CW and digital modes.

And if an unfriendly (to ham or CB radio) neighbor learns that it is
not in use for TV he can cause you all sorts of problems.

Of course N2EY Jim is right, the California Pet Pre-emption law
should help hams get relief of some sort from CCR restrictions. The problem as
always is in the details. One antenna wouldn't be
enough, one would need one for each band in use, particularly
for widely separated frequencies, HF and VHF etc. It would
probably have to be the start of specifying just what could be done,
as opposed to allowing whatever a ham decides he needs. The
potential for problems is large. Some ham will always want something
that a neighbor will consider excessive, etc.
It will certainly be worth working out the details.

> of letters to the appropriate legislators.

I'm not sure just when this law was passed, but I wish ARRL
had the information when they asked for reconsideration of FCC's
refusal to prempt CCR's. (assuming they did not). It would seem

to to have been a telling point to be able to point out that at least
one state believes that CCR contracts are not impenetrable for good
reason, and to point out that emergency radio communications
are at least as good reason as a homeowner wanting to keep a pet.

Cecil: FISTS memberships do not expire. Dues are only paid to
spport the monthly newsletter, which I dropped a couple years
ago. Actually I think you need a change of attitude more than
a change of glasses.

So because I believe that a code test is appropriate for licensing
ham radio operators, I try to dictate.

You need a brain change.

My understanding is that the FCC wants Congress to tell them to do it, same as
what happened with those "pizza dish" sat antennas. So we need to develop a
way of mustering Congressional support all at once.

I have some insight on this, since I just took and passed my Extra
class exam this past weekend.

I'm not smug, or liberal, or arrogant, or even close to politically correct.

The test was just about as hard as I would expect it to be for the
priveleges accorded an extra. It was certainly not simple. A person
could not "memorize the test". You had to know the answer. Note, that
even using the question pool as a study guide, the answers were rearranged.

The test was no harder or easier than tests I've taken in school.

To the original poster: Go for your General, then the Extra. If you
want to take them at the same time, fine. There may be some subtle
advantages to getting them separately though. Just easing into the
levels isn't a bad thing.

And Larry, you ought to give it a little bit of a break! Flip answers
and mostly negative commentary about how Ham radio is being "dumbed
down" can certainly have the effect of steering potential hams away from
the service, if not from general discouragement, then from the
impressions that Hams are just cranky.

It's California Civil Code 1360.5, effective Jan 1, 2001. It
demonstrates a state's authority to prempt CC&R's.

5195. The tests that Real Hams took

Newsgroup: rec.radio.amateur.policy

I've heard a lot about how the new ARS tests have been "dumbed down".

Does anyone have any copies of the tests that prospective amateurs took before this happened? I think some comparison would be a great help.

And if not, how is this argument for dumbing down supported? We need something substantive here, not just "I know".

If Kim is not skillful with a stick shift, it might be advisable
to avoid stick shifts. If Kim is not skillful with CW, it might
be advisable to avoid CW for emergency situations. For instance,
her CB radio would probably be a lot more useful out on the
road than HF CW even though HF CW is more reliable.

Mike, they are talking about the lowering of the Morse code requirement to 5wpm.
They believe that a person's IQ goes down when he/she learns Morse code at the
5wpm level. How is that attitude supported? Pure Neurotic Fantasy.

Okay, let's get you started on transistors, then. You've avoided the obvious by not mentioning a 2N2222 or 2N3904. Do you know the difference? How about between a 2N2218 or a 2N3905? Or 2N3906? Or 2N4124 or 2N4125?

What should you add to such a circuit to keep it working and why?

>>Dick won't say what he did so I have no way of knowing whether
>>he designed anything or not.
>
>He described at least one project that I know of. There are probably lots
>more. From his description of his pair of 813s amplifier I would say some
fairly
>serious RF design took place. Also power supply and control circuit design,
>mechanical design and layout, fabrication, and testing.

Claims are not verification, only claims. There have been dozens of 813 finals in amateur literature, many more on the 807-1625 and the 829...and power supplies for all of them. Final amplifiers in HF are not the sum total and ending of amateur radio design.

"Serious" would imply load-line charting, tests with various impedances (high to accommodate the tube prior to working out the output network).
"Serious" implies checking for parasitic oscillations, observation of RF envelopes during keying, checking rise and fall times, and understanding the why and what-happens with all of them.
"Serious" would imply at least some sort of spectrum analysis (even if only listening-observing with a highly-attenuated receiver).

"Serious" must include checking for spurious and harmonic output to
ascertain that the amplifier follows FCC regulations.
"Serious" would include knowing how to fix/re-design if the performance
did not meet FCC standards.

>> I assume he copied circuits designed by others.
>
>Not a good assumption. And there's a lot more to designing a rig than the
>circuit.

All of us readers are left with a very general CLAIM with not verification
except for your ASSUMPTION, which is specious indeed.

>>He did not deny doing so or explain what he really did.

>Yes, he did, in at least one instance cited here..

Please reference or cite that "instance."

>How many amateur receivers, transmitters or transceivers have you designed
>and built, Cecil?
>
>>A man who refuses to defend himself is usually guilty.
>
>To a biased judge, maybe. JC didn't defend himself.

The reference to "JC" is rather out of place, isn't it? Is electronics design
somehow theological or supernatural?

Are you Judas Escargot? :-)

>>> That you have not found them does not mean they do not exist.
>>
>>Well, that's true and is the reason that patent lawyers do patent searches.
>
>You gonna patent it?

Is the divine JM aware of the approximate full price of a single electronics
patent these days? Unless someone can do their own patent search for
the full disclosure a Search firm must be hired. The total patent applicant's
cost was in the neighborhood of $6000 to $8000 US two years ago
according to a certified patent attorney out here who makes his living in
such law.

>>Do you know of any two-component systems that automatically key the IC-706
>>into tune mode when the screwdriver motor is engaged?
>
>Nope. Yours uses at least three components.
>
>You coulda used an optoisolator and eliminated the mechanical relay, too. As
>much as I like relays, the cheap ones can be trouble.

Does the divine JM consider himself the Design Review Leader now?

If so, he must present his case of negative reviews of another's personal efforts
in clear electronics terms considering all factors of why this particular effort is "unsuitable." Show the work, JM, assumptions are invalid anywhere else.

This non-review by JM is simply a personal negative of no valid electronic signifcance except to attempt putting another down for his expressed personal viewpoints on an unrelated matter. This violates Rules Three and Four in the Amateur's Code.

5209. Re: Radio Policy

>
>Ah, I see. You are saying I should not use CW because Kim can't
>drive a stick shift.

No one has said any such thing. All the conclusion leaping has gone on in N2EY's head and never propagated into reality space.

The various states allow a great assortment of motor vehicles on roadways and all cooperate in that, limiting only the drivers who must pass tests for certain qualifications set by each state. States cooperate with each other on allowing other-state motor vehicle operator licensees to operate in their state jurisdictions. "Reliability" has little to do with the type of license but rather the motor vehicle itself. "Reliability" MAY enter into the discussion in inclement weather conditions relating to a specific type of vehicle.

If N2EY has a rare specific type of vehicle and has been authorized to drive it by a particular state, he may feel free to use it within the boundaries of that state's regulations. If he drove the rare vintage three-wheel post-WW2 Messerschmitt motor vehicle and was duly authorized to do so, he may feel "safe" in its reliability but that is not related to safety in bad weather and its potential effect on other motorists, motor vehicles, or pedestrians should he lose control of that or any other vehicle.

Proper control of a motor vehicle does not depend on the style of its transmission or control thereof, but does depend on the motor vehicle speed for road conditions (controlled by throttle, foot or hand operated), steering control (front or rear wheel depending on approved vehicle type), ability to see properly, judge distances to coordinate speed and steering

in differing weather and light conditions, obeying all traffic signals, direction and control signs. The type of motor vehicle transmission control does not enter into the discussion, including those rare cases where a few motor vehicles do not have any transmission (the last steam motor vehicle manufacturing company in the USA was located in eastern Pennsylvania, shut down approximately in the 1970s).

Steering of a motor vehicle does not mean exclusive control by means of a steering wheel. Three-wheel hybrid vehicles modified from motorcycles using a handlebar steering control are allowed in all roadways provided they pass tests to prove their steering capability and control. That proof does not require a specific method of control, only that control ability and safety exists.

On the extremely tenuous analogy attempt of comparing OOK CW radio communications methods to the type of motor vehicle transmission control, there is no sane comparison worthy of further discussion.

The USE of OOK CW radio communications is OPTIONAL by US radio amateurs of ANY CLASS wherever allocated for USE in ANY BAND. USE does NOT depend on whether or not an amateur radio licensee of ANY CLASS has passed a morse code cognition test for that test.

Has N2EY read and understood these conditions as they have been explained to him?

>anytime, you are more than ready. Call it NPI, Nit Pickers International.

There is NO organization called "Nit Pickers International" except in
the fantasies of individual PCTA minds.

Many have held calm, candid, rational conversations with Cecil Moore
including those who disagree with his viewpoints. That is visible to
anyone with access to this newsgroup, on-line, off-line, or as stored
in archives.

There is NO calm, candid, or rational conversation or discussion with
those who insist that ONLY THEIR viewpoint is "correct," "good," or
"superior."

>Your
>motto can be "We never assume that hams of
>long experience will be familiar with anything but they must give
>a most complete description of every subject they address, lest
>all those wellread newcomers be confused. Don't hold us to our
>own standard, though".

Carroll's viewpoint is simply the old, tired "territorial imperative"
self-ownership-by-tenure closed-mind rationalization. Such has
a great deal of selfishness about it and includes a demand that
all think as he does or be treated to an enormous amount of
pejorative commentary about the person rather than on the subject.

Time NOW is not the 1930s, the 1950s, or the 1970s or any other
time of the PAST. "Hams of long experience" cannot justify their
out-dated standards by anything except their own PERSONAL

PREFERENCES or having met OLD standards set by even-longer-experience radio amateurs who existed at the dawning of amateur radio. ALL radio is only 106 years old. The first radio club organized anywhere in the world began in 1909 in New York City, not some community in New England.

Every other radio service except maritime radio and amateur radio has either never considered OOK CW "morse codes" or have DROPPED its use, finding it neither speedy nor reliable nor advantageous in any aspect. Maritime radio NOW relies on voice and data for regular communications, on automatic Inmarsat relay for distress and safety communications.

That leaves only the little subset of amateur radio where some "hams of long existance" still attempt to hold up their own personal-preference mode of "morse codes" as the "STANDARD" for all newcomers to amateur radio to meet in license testing.

THAT is DICTATORIAL.

Mike, it still would not work simply because the state of the art moves on and so do we. The first time I took Element 3, and I was 12 at the time, one of the cures given for spurious emissions was to neutralize the oscillator which caused me to break out laughing. Exams which would be and are trivial today to the groupies are hardly trivial at the time of first impression. And over the years the question pool changes depending upon among other things the problems the FCC is having at the moment and what their idea of the 'compleat' Amateur has been; this has cycled between 'Prairie Shit, let 'em all come' and the great post-Sputnik emphasis on the pool of skilled ops about the time the military said ZBM-2 and gave up. Some of us took it in the prairie shit days like Ed's famous thin study guide and some did it when people compared the Advanced to the 2nd Phone and some of us managed to do both.

The Second Phone in those days was 150 questions and the Advanced was 50 and still the comparison is made which if nothing else illustrates sampling theory at work, it really doesn't take a whole lot of questions to make the point, especially when I would suspect the grade curve looks like Britney Spears from the top, distinctly bi-modal. Given that one does not select all the questions from variations on one from the pool and spreads them over the major areas and maintains some test security they will do the job.

The trick, of course, is to define just what the job that is supposedly being done really is and what relationship that job has to privleges granted. One suspects that he is in one of those ceremonial things where the outcome is not nearly so important as the ritual itself.

Removing the circuit power works better! (grin)

I see your point, Dick. It would still be interesting to see some of
the earlier tests. Even a cursory look-see would answer some of the comparisons.

Why is it necessary to add a qualifier to make a statement true? Cars ARE black. Not ALL cars are black, but cars are black. "Cars are not black" is not true because there are black cars.

"Cars are black" is not the same as "All cars are black" nor the same as "Some cars are black."

IF X="black", "TRUE","FALSE" is a logical test. If any occurrance of X is black, then X="black" -- in that instance.

Reference a college textbook on logic to see why "cars are black" is
a false statement. "Cars are not black" is also a false statement.
When one makes a logical statement like, "cars are black", *all* is
implied, *by definition*.

> Does anyone have any copies of the tests that prospective amateurs took
>before this happened? I think some comparison would be a great help.

I have asked a few FCC and former FCC guys I know. None seem to be able to find any of the old tests, though I know a few more guys now than I did then. Let me try again.

In the meantime, just for a discussion point, here is the text from the 4 pages of Novice material in the ARRL study guide. As I remember, the questions I took on my Novice were mighty similar to these questions. After all, how many ways can you ask how much power a Novice can run? :-)

Please forgive the formatting and OCR errors. And, PLEASE, if you reply to this, cut out the text you are NOT quoting -- this is pretty long and no one wants to download it umpteen times. :-)

73,
Ed Hare, W1RFI

CHAPTER 2

The Novice License

The Novice Class license offers an ideal way to get started in amateur radio -- reduced code speed and a simplified written examination. It grants a portion of amateur privileges on an "apprenticeship" basis for one year. The examination is available only by mail. This chapter explains the license in detail and contains sample questions for the written exam.

In an incentive to encourage a greater number of people to engage in the hobby of amateur radio, the Federal Communications Commission has established a Novice Class of license with greatly reduced requirements and only a few of the privileges available to amateurs. This class of license might well he termed an apprenticeship. It has a term of but one year, compared with the five-yea terms of other amateur licenses, and the objective is to give a newcomer a period of a year of actual on-the-air experience or training in amateur operation so that he may develop his skills toward one of the permanent classes of license more rapidly than he would by textbook study and audio-oscillator code practice.

The Novice Class license examination may now be taken only by mail, under the direct supervision of an amateur holding a General Class license or higher, or a commercial radiotelegraph license. This is true no matter where the applicant lives. Refer to the section "Examination

Procedures " in Chapter 5 for details on the rules governing the routine for making application and obtaining a set of examination papers. Requirements for the Novice license are the passing of a code test in sending and receiving at the rate of 5 words per minute, and a written examination in the most elementary aspects of amateur regulations and theory.

The privileges which are currently available to the Novice licensee are:

3700 3750 kc. - telegraphy
7150-7200 kc. - telegraphy
21,100-21,250 kc. - telegraphy
145-147 MC. --telegraphy or voice

In addition, the transmitter used by a Novice licensee must be crystal-controlled, and may not have an input exceeding 75 watts. Of course, the Novice may operate portable or mobile on any of these frequencies. (SeeChapter 7).

The most important point concerning the Novice license is that it is valid for only one year and may not be renewed. Before the end of his license term the Novice must qualify for one of the other grades of amateur licenses, or go off the air. He may try for a Technician Class or a General Class license (or Conditional Class, if eligible to take the mail examination). Whatever his choice, he must qualify for all requirements of the particular license class inasmuch as the Novice Class license, being obtained by mail, carries no credit toward a higher grade of license even where the examination elements are identical (such as the Technician 5 w.p.m. code test). He may not try for a class higher than those mentioned, of course, since experience as a Novice operator does not qualify for the service requirements for the Extra Class license.

Anyone who is a citizen of the United States may apply for the Novice, license, except a person who holds or ever has held an amateur license of any class. Thus a Novice not only is unable to renew his license at the end of his term, but he may not again apply for Novice privileges. If an applicant for Novice privileges feels that he can pass the standard written examination for amateur licenses but is unable to meet the 13 w.p.m. code requirement, he may simultaneously apply also for the Technician Class of license, taking the 5 w.p.m. code test, the elementary Novice written exam, and the standard written exam.

A Novice may operate any FCC-licensed amateur radio station, but only to the extent of the privileges available to the Novice and similarly available to the licensee of the station being operated. For example, when a Novice visits a station licensed to a General Class amateur, he may operate in only the Novice bands, using crystal control and with 75 watts input power or less. He uses his host's call sign exactly as issued, however. When a Novice operates a Technician's station, he may use only the 145-147 Mc band, since that is the only band common to both Novices and Technicians.

As stated, the written examination for the Novice license is quite simple. It consists of about 20 questions dealing with basic amateur regulations, and certain points of theory and technique. The questions are of the "multiple-choice" type, as explained in Chapter 1. There are no diagrams required. Following is a set of questions similar to those which are asked in the examination. If you are thoroughly able to answer each of these sample questions, you will have no difficulty in passing the written exam. However, in any event we recommend additional study of at least the technical material in How to Become a Radio Amateur and preferably of the introductory chapters of The Radio Amateur's Handbook ($3.50), both available postpaid from the ARRL, West Hartford 7, Conn.

The receiving code test for the Novice Class license consists of 25 five-letter words, mostly common ones. No punctuation marks or numerals are included. To pass, the applicant must copy at least 25 consecutive letters accurately. In the sending test, numerals and simple punctuation marks may be included.

QUESTIONS:

1. What is the maximum input power permitted to the final stage of the transmitter in a station licensed to the holder of a Novice Class license or operated by such an operator?

The maximum input power permitted a Novice is 75 watts.

2. What is the maximum penalty for a violation of the rules and regulations of the Federal Communications Commission?

A fine of up to $500 for each day during which the offense occurs, suspension of operator license, and revocation of station license.

3. On what frequency bands may the holder of a Novice Class license operate an amateur radio station?

3700-3750 kc.
7150-7200 kc.
21,100-21,250 kc.
145-147 MC.

4. On what frequency bands may the holder of a Novice Class license operate an amateur radiotelephone station?

5. What is the log of an amateur station, and what information is required to be entered therein? How long must it be preserved ?

The log of an amateur station is the written record of transmissions. The log must show:
1) the date and time of transmission
2) the signature of each licensed operator operating the equipment and the name of any person not holding a license who speaks over a radiotelephone transmitter directly or by recording, or operates a teleprinter keyboard
3) call of the station called
4) the input power to the transmitter

5) the frequency band used
6) the type of emission used
7) the location of the station at the time of transmission
8) the message traffic handled

Information such as the input power, frequency band, type of emission, location of station, need be entered only once provided the conditions are not changed. Similarly, one entry of the date need not be repeated for other transmissions made on that date. If the station is mobile, the approximate geographic location can be indicated in the log.

The log of an amateur station must be preserved for at least one year following the last date of entry. Similarly, any message traffic handled must be kept on file for at least one year.

6. What is the term of an amateur Novice Class license? Under what conditions may this license be renewed?

The term of an amateur Novice Class license is one year. It may not be renewed under any conditions.

7. What are the rules and regulations regarding the transmission of improper language, false signals, or malicious interference?

The transmission of obscene, indecent or profane language, or of false or deceptive signals or call letters, or of malicious interference is expressly prohibited and there are heavy penalties for violation.

8. What are the rules and regulations regarding purity and stability of emissions?

Below 144 megacycles, spurious radiations must be reduced in accordance with good engineering practice, and must not cause interference to near-by receivers of good engineering design not tuned to the transmitter. Voice modulation of a transmitter must not cause spurious emissions; the maximum modulation percentage is 100%. Simultaneous frequency modulation and amplitude modulation is not permitted. The frequency of the signal transmitted must be as constant as the state of the art permits.

9. What method of frequency control is required to be used in the transmitter of a station licensed to the holder of a Novice Class license?

The frequency must be crystal-controlled.

10. What are the rules and regulations regarding the measurement of the frequencies of the emissions of an amateur radio station?

Regular measurement of the frequency of the transmitter is required. This measurement must be by means independent of the means used to control the transmitting frequency and must be of sufficient accuracy to ensure operation within the frequency band used.

11. Who may be permitted to operate the transmitter of an amateur radio station licensed to the holder of a Novice Class license?

Any amateur radio operator (though a Technician may operate a Novice's station only in the band 145-147 Mc., since that is the only band the two classes have in common).

12. Under what circumstances may an amateur radio station be used by a person who does not hold a valid license?

A person not properly licensed may not operate an amateur station. However, he may speak over the microphone of an amateur radiotelephone station or use the keyboard of an amateur radio-teleprinter, provided a duly licensed operator is present to control the emissions.

13. What is the maximum permissible percentage of modulation of an amateur radiotelephone station?

One hundred per cent.

14. At what intervals must an amateur station be identified by the transmission of its call sign? May any transmission be made without identification of the station?

An amateur station must identify its call sign at the beginning and end of each transmission and at least every ten minutes if a single transmission lasts longer than ten minutes. No transmission by itself may be made without identification of the station, except that during a sequence of transmissions each less than three minutes long, the call sign needs to be given only once each ten minutes as well as at the beginning and end of the work.

15. Under what conditions is notice of portable or mobile operation required to be given, and to whom in each case?

Notice of intended portable operation, or mobile operation, must be given the FCC Engineer-in-Charge of the inspection district in which such portable or mobile operation is contemplated only when the operation is or is expected to be for a period longer than 48 hours.

16. What are the recognized abbreviations for: kilocycles, megacycles, Eastern Standard Time, Greenwich Mean Time, continuous wave, frequency modulation, amplitude modulation?

kilocycles - kc.
megacycles - MC.
Eastern Standard Time - EST
Greenwich Mean Time - GMT
continuous wave - C.W.
frequency modulation - f.m.
amplitude modulation - a.m.

17. What is the relationship between a fundamental frequency and its second harmonic; its third harmonic, etc.?

The second harmonic is twice the frequency of the fundamental, the third harmonic is three times the fundamental frequency, and so on. A harmonic is always related to its fundamental frequency by an integral multiplier; i.e., 2, 3, 4, 5, 6, etc.

18. What is the relationship between a cycle, a kilocycle, and a megacycle?

1 kilocycle = 1000 cycles
1 megacycle = 1000 kilocycles = l,000,000 cycles

19. What instrument is used to measure: electrical potential; electrical current; electrical power; electrical energy?

Electrical potential is measured by a voltmeter.
Electrical current is measured by an ammeter, milliammeter, or microammeter.
Electrical power is measured by a wattmeter.
Electrical energy is measured by a watt-hour meter.

20. What is the purpose of: a modulator; an amplifier; a rectifier; a filter?

A modulator is used to vary the amplitude, frequency or phase of the output of a transmitter for the purpose of transmitting information. An amplifier is used to increase the amplitude, or power level, of a signal. A rectifier is used to change alternating current into pulsating direct, current. The purpose of a filter is to attenuate undesired frequencies while simultaneously passing, without appreciable attenuation, a desired band of frequencies and/or direct current. Examples: The power-supply "smoothing filter," which eliminates the alternating-current ripple from the output of a rectifier but permits direct current to flow with little or no attenuation; the "low-pass" filter, which attenuates all frequencies (such as harmonics of a transmitter) above a given frequency but passes all lower frequencies.

21. What is meant by: amplification; modulation; detection; attenuation?

Amplification is the process of increasing the amplitude, or power level, of a signal. Modulation is the process of varying the amplitude, frequency or phase of the radio-frequency output of a transmitter. Modulation is normally employed for the purpose of transmitting information. However, it may also occur inadvertently, as in the case of "hum" modulation of a signal resulting from ripple in the output of an insufficiently-filtered d.c. power supply. Detection or demodulation is the process of extracting the information contained in the modulation on a radio-frequency signal. Attenuation is a reduction in amplitude.

22. What is the purpose of: a radio-frequency choke; an audio-frequency choke; a filter choke?

The purpose of a radio-frequency choke is to oppose the flow of radio-frequency current while permitting direct current and audio frequencies to flow without appreciable opposition. The purpose of an audio-

frequency choke is to oppose the flow of audio-frequency currents while permitting direct current to flow. The purpose of a filter choke is to aid in smoothing the direct-current output of a rectifier.

23. How is the actual power input to the tube or tubes supplying energy to the antenna of an amateur transmitter determined?

The input power is determined by measuring the direct-current plate voltage and the d.c. plate current to the tube or tubes in the final stage in the transmitter. The power input is equal to the plate voltage multiplied by the plate current in amperes. Example: Two tubes in the final stage of the transmitter take 50 milliamperes each, at a plate voltage of 500 volts. The total plate current is 2 X 50 = 100 milliamperes, or 0.1 ampere. The power input is therefore 500 X 0.1 = 50 watts.

24. Why are a rectifier and filter required in the plate power supply system of an amateur transmitter when operated from alternating current?

The amateur regulations require that an adequately-filtered plate supply be used on transmitters operating below 144 Mc. The rectifier is used to convert the alternating current into direct current. However, its d.c. output is pulsating, not constant, and the filter must be used to smooth out the pulsations so that the output is essentially "pure" -- that is free from pulsations or "ripple."

25. What is a frequency multiplier?

A frequency multiplier is a device that delivers output at an integral multiple (i.e., 2, 3, 4 times, etc.) of the applied frequency. The output of a frequency multiplier is consequently on a frequency that is a harmonic of the fundamental (applied) frequency.

26. What are the undesirable effects of overmodulation in radiotelephony?

Overmodulation results in the generation of spurious sidebands - that is, frequencies lying outside the band of frequencies or "channel" actually required for transmitting the information contained in the modulation. Those spurious frequencies, called "splatter," will interfere with communication on near-by channels and may even lie outside an amateur band. At close range they may also cause interference with broadcast reception.

27. What is meant by a "parasitic" oscillation?

A parasitic oscillation is one not essential to the operation of the equipment and usually occurring on a frequency considerably removed from the operating frequency.

28. What is the purpose of a "key-click filter" and when should it be used?

The purpose of a key-click filter is to reduce spurious radiation generally when keying a radiotelegraph transmitter. It should be used whenever required for suppressing such spurious radiations.

29. What is Ohm's Law?

Ohm's Law expresses the relationship between potential, current and resistance in any circuit.

It is stated as I = E / R where I = current in amperes, E = potential in volts and R = resistance in ohms. By simple algebra it is also E = I * R and R = E / I.

30. What precautions should be taken to avoid the danger of shock from high-voltage electrical circuits?

Such circuits in transmitters and receivers should not be exposed where the operator can inadvertently come in contact with them when the power is turned on. All work on equipment involving the possibility of contact with such circuits should be done only after the power has been turned off. All power-supply capacitors should have bleeder resistors connected across them, to discharge the capacitors after the power has been turned off.

31. What is the relationship between the frequency and the wavelength of a radio wave if its velocity in space is 300,000,000 meters per second?

The frequency in cycles multiplied by the wavelength in meters is 300,000,000. Therefore, the wavelength is inversely proportional to the frequency; in other words, the longer the wavelength, the lower the frequency. The formula for calculating frequency (f) in cycles when the wavelength in meters is known is f = 3,000,000 / wavelength ; similarly, wavelength = 3,000,000 / f. Example: The wavelength of a signal whose frequency is 3700 kilocycles is 300,000,000 / 3,700,000 or 81.08 meters.

32. What symbol is used in the amateur rules to designate amplitude-modulated telegraphy without the use of modulating audio frequencies (on-off keying)?

Al. (The "A" indicates amplitude modulation, and the numeral "1" is used to indicate telegraphy by on-off keying).

33. What is the ruling regarding eligibility for reexamination?

An applicant who fails an operator examination may not take another examination for the same or higher privileges within 30 days (except that this does not apply to an examination for a General Class license following a mail examination for a Conditional, Novice or Technician Class license).

34. What factors are commonly responsible for harmonic radiation and what practical means can be used to detect and correct such condition?

The principal factors responsible for harmonic radiation are (1) improper operating conditions in the final amplifier, such as excessive

grid bias and excessive drive, causing the tube or tubes to develop unnecessarily large harmonic output: (2) poor selectivity interstage tank circuits, resulting in excessive harmonic content in the excitation voltage applied to the final stage (3) inadequate selectivity in the final tank circuit because of too-low operating Q; and (4) insufficient selectivity in the coupling circuit between the final-amplifier tank circuit and the antenna, or omission of such a coupling circuit.

These defects can be corrected by (1) reducing grid bias and drive to the minimum necessary for reasonably efficient operation of the final tube or tubes; (2) using higher-Q interstage circuits, usually by increasing the ratio of capacitance to inductance or by decreasing the coupling to lighten the loading on the circuit; (3) adjusting the final tank inductance so that the tuning capacitor will be set for higher capacitance at the operating frequency: and (4) installing a tuned antenna-coupling or matching circuit between the transmitter and the transmission line or antenna.

The presence of harmonics in the output of a transmitter can be detected by the use of an absorption wavemeter, having a sensitive indicator, coupled to the final tank circuit or to the antenna coupling circuit, and successively tuned through the harmonics of the operating frequency. Alternatively, tests can be conducted with a nearby amateur station, with the cooperating amateur listening on the various harmonic frequencies while the transmitter is in operation. The receiving station should not be so close that the fundamental-frequency signal strength will be such as to overload the receiver and thus cause spurious harmonic responses in the receiver itself.

QRP ARCI operates the same way, and once you are a member, you are a member for life. It sounds like FISTS is the same.

For that matter, NCI also signs people up for life. NCI and FISTS have something in common after all!

I don't think so, Cecil. I don't think that Dick believes that the ARRL and the FCC used shorthand to take down his words.

I just can't see a dictionary definition of dictate that fits what he said in context. Can you?

Does "wordmeister" mean that we believe that words mean what words mean?

Here's an example, however:
"Humans are mortal." true or false? "Humans are tall." true or false?
Shirley, you can see the difference between the scope of those two
statements. And every logic statement must be either true or false.
One logic statement is not allowed to be more true than another.

You're forgetting about PRB-1. Remember that CC&R's are valid only if they provide for a reasonable accomodation. Those which don't accomodate in any way are blatently invalid and trumped by the FCC's ruling.

PRB-1 doesn't address CC&R's. It addresses local ordinances.

From the ARRL Web-zine...

Boston Marathon Amateur Radio preparations under way: Amateurs in Massachusetts are making preparations to support the 106th running of the Boston Athletic Association's Boston Marathon on Patriot's Day, April 15, 2002. Amateur Radio plays a vital part in supporting runners before, during, and after the 26-mile marathon. "This year we have a combined organization handling all phases of radio support; start area, length of the course, and finish line," said Paul Topolski, W1SEX. Positions are available starting early in the day at the starting point in Hopkinton, as well as at aid and water stations along the route and later in the day at finish-line operations in Boston. Volunteers may chose an activity to be involved with or work multiple locations, Topolski said. Along the 26-mile route, hams will assist the Red Cross at aid stations with supply requirements and ambulance dispatch. Hams also will be aboard runner pick-up buses traveling the route. At the finish line, hams work with the medical teams and shadow Marathon officials. Participants will need a 2-meter or dual-band H-T, extended antenna, and extra batteries. Training will be available before the event. An on-line sign-up form and more details are available on the Crocker Public Service Group Web site. A BAA volunteer form is available at the Boston Athletic Association Web site. For more information, contact Steve Schwarm, W3EVE, w3eve@arrl.net; 508-384-7697 (after 8 AM or before 9 PM).--Paul Topolski, WISE

Of course, it's not official till it's in a main stream west coast news medium AND just to show there is something for everyone...note the callsign!!!!

Bill: With people who think like Little Dick, one need not worry about what prompted their attempt to insult you. It's because they're too ignorant to understand what the meaning of diversity is.

It would be a good analogy if I didn't know how to drive one. I do (my Saturn and this truck are the only two automatics I have had since driving--started in a SAAB, then Yugo, , then Subaru GLF, then VW Golf, now these two recent vehicles). An appropriate analogy, though, for the stickshift would be that I can drive it, but why would I want to beat myself up with one? (I had to get out of stickshifts because of my back). That is to auto driving as CW is to radio: why would I want to beat myself and others up with using CW when I can do lots of other things that may work just as well?

You sure you aren't using emergency communication as just an excuse? Not a good one...the FCC is right on that; you can communicate mobile or from the EOC. Add to that it seems that your abhorrent fear of people who like 2M and are marginal with CW and you wouldn't be the slightest bit interested in emergency communication. Are you?

Good point. I think the ARRL is spinning its wheels with the issue, but
they can have the fun. I think the FCC is right on this one and you do
point out that workarounds can be made in restricted operating
conditions--exactly the FCC's point when they state that there is mobile,
club, EOC, and other ways in which to operate.

Ah, I see. A car that is reliably unreliable is better because you can rely
on its being fixable.

>Let's see...it's hard to equate this to automobiles because there really
>isn't such a rarity of people who can fix whatever make.

So we need to find a car that is both rare and unreliable.

>But, let's say
>there was a choice between a really reliable auto, though garages are few
>and far between that know it well; and a not-so-reliable auto with garages
>that know it well are quite common.

With automatic transmissions only, too.

>I'm banking on the likelihood that,
>knowing my luck, either auto is going to break down. I am going to go with
>the auto most likely to get repaired.

So your recommendation is to rely on unreliable things because they may
be counted upon to be fixed reliably. But don't rely on reliable things because
their reliability works against them being reliable.

Absolute fact: I am trying to sell a Maytag clothes washer in very good condition.
So far no takers. Guess they are too reliable.

Mike,

Congrats on the upgrade! Enjoy the new privs!

Before the restructuring of April 2000, there were 3 code and 5 written test elements. Today there is only one code test and 3 written elements. The pre-restructuring tests totalled 190 questions in 5 tests while the new writtens
involve 120 questions in 3 tests.

--

Here's what the written tests were like back when I took them: (Novice - 1967, Tech - 1968, Advanced - 1968, Extra 1970). I don't know if these would be considered "the tests Real Hams took" or not.

I didn't think the written tests were that hard back then. They were easy enough
for me to get the Advanced at age 14 and the Extra at age 16, and those ages weren't unusual back then.

A few years ago an 8 year old in the third grade got the Extra. This was before restructuring, so this ham did 20 wpm code and all five written tests.

The Novice was a very basic 20 question multiple choice exam, mostly on the regs witha little theory thrown in. But its privileges were extremely limited, and
once the license expired in two years you were off the hambands until you upgraded.

The Tech and General both used the same exam back then. About 50 questions, about 1/3 regs and 2/3 theory. Schematic and block diagram recognition, some calculations, Ohm's Law for DC, etc.

The Advanced was 50 or so questions, mostly theory. Lots of phase angles and such.

The Extra was about 50 questions, again mostly theory. Less calculation, though.

Exact comparisons are not possible because the old tests are not available, to my knowledge. One can gauge the difficulty and subject matter of the tests from the
"study guides" put out by the FCC and reprinted in the ARRL License Manuals and other publications. These guides were in the form of essay questions, even though the tests were all multiple choice.

The old tests covered fewer subjects, but covered them in more depth.

The real difference between now and the past is the test methods and requirements.

Today, the exact questions and answers are public knowledge and available to all for study. Back then, the exact questions and answers were kept secret. This meant that a prospective ham did not know exactly what to expect. For example, today a prospective ham knows exactly what all of the Ohm's Law questions look like, but back then, we only knew that there would be Ohm's Law questions on the test, so we tended to learn Ohm's Law backwards, forwards and sideways, to be ready for everything.

Today, one can retest at any time - just pay another fee. Back then, there was a minimum 30 day wait before retesting. You also had to pass ALL of the elements for a particular license at the same session - no CSCEs. They gave the code first, and only if you passed it did you get to try the written. If you failed
the written, you went home for at least 30 days and then had to do both code and
written again.

Today, VE sessions are given on weekends and at night. Back then, unless you lived way out in the boonies or were disabled, anyone wanting a General or higher had to go to an FCC office for a daytime weekday test session. For many hams that meant a 3 hour drive each way, and the test began at 8 AM.

Back then you needed 2 years experience as a General or higher before they'd even let you try the Extra.

So you see that "back in the day", we had lots of "incentive" to be really really
REALLY ready for the tests, because it was a lot of aggravation to get to the test session and even more to retest.

The code tests were different, too, but that's another story.

Which do you think is easier: a test where you have the exact Q&A available, or one where you have sample essays on the material the test covers?

How does having to pass 5 written tests totalling 190 questions compare to having to pass 3 written tests totalling 120 questions - for the same license, and the same question pools?

--

If you want a detailed history of how the US licensing system for hams has evolved from the end of WW2 to the 2000 restructuring, I'll repost it.

Yep. Plus, with CB radio *and* ham radio, I have a greater chance of reaching someone. Never discount *any* radio source in an emergency. If I thought there were that many people always "within range" I would also have FRS, GMRS, etc., capabilities. But, the line must be drawn somewhere. 2M, 70cm, and CB are better than nothing. And, all do me better than CW capability. I suspect there are many who feel the same way.

Maybe you men are just having a hard time with this. Let's say I can get a European made sound system/stereo that is absolutely reliable. The components last and last, the sound is beautiful, the workmanship is top notch. BUT, if it ever breaks I have to ship it back over to Europe and pay shipping both ways, as well as the inconvenience of the time it would take.

Then, let's say I can get a lot less reliable sound system/stereo that has a service and repair shop in nearly every major city, and some small towns.

I'm getting the less reliable sound system, unless I'm just in a really crazy mood and take that chance that the super reliable system really *is* *always* that reliable. I am not a risk taker, never have been.

From the above reference submitted by you, Little Dick:

"Given the deed restrictions and municipal ordinances that we now face in urban areas, the easiest way to have a big signal these days may be to head for the boondocks. There are all sorts of places where land is still cheap and nobody seems to care if you put up a tower or two--or three or four! Those places just aren't in the cities where most of us live."

Now, where've we heard *that* before? Head for the hills. No, wait. I'm in the boondocks and we don't need no steenking city slickers... :^)

Contrary to Cecil's assertion that this assessment relates solely to the Morse Code issue, I for one put "dumbing down" on the shoulders of Dick Bash, Gordon West, Fred Maia and the other (yes, the League too) verbatim study guide folks.

I think it absolutely ludicrous that we have a radio service that is supposed to promote some sort of self education on radio communication practice and theory, but we lay the answers out for all to see.

Where's the learning in that?

As a VE, I don't believe the tests themselves are "dumbed down". The questions are, as much as the lag time from concept to publication allows, pertinent.

You see what you want to see. The UK membership is separate from the
US membership. If they drop members from the membership
list it is a drastic change in policy that has not been announced.
I seriously doubt it, and in any case I still have my certificate with
number 3939 that was issued for life. End story and termination
of your current troll.

>
>Welp, too bad you didn't recognize it for it's uniqueness right up front.
>Maybe you wouldn't have wasted so many years in defiance of it.

Kim:

Nobody recognizes the "uniqueness" of Morse/CW until they've tried it.
The thing that got me to try it was my desire to be a licensed radio
amateur with HF phone privileges. I met the code testing requirement,
not at all expecting to become a CW operator. I gained that desire only
after my exposure to CW at a speed which gave me useful operating
proficiency.

>> >This is getting really confusing, Little Dick.
>>
>> That's MISTER Carroll to you, dear.
>>
>
>Nope, sure isn't. Little Dick deserves no, zero, nada, respect from me.

At the risk of speaking for Dick, I'm fairly certain the feeling is mutual.

>> >It sounds more
>> >like you wish to force CW on people. Is that right?

I can't force anything on anyone, Kim. However, this "force" thing,
as empty an argument as it is, is one of the mainstays of the NCTA
debating syllabus. It's a meaningless, empty, illogical argument used
by people who cannot justify their position.

>> How can Dick, or anyone else, "force" CW on anyone? Nobody was
>> able to "force" it on me -- I learned it because I wanted to be a ham
>> with HF privileges, and code tests were required.

>Somehow the word "required" doesn't go with "wanted" but whatever.

What kind of an argument is "but whatever?" OIC, a Kim Walker kind of
argument. Never mind.

>> >Having CW as a phase of testing does not do anything one way or the other
>> >for whether someone is going to use it or not.

>>
>> Well, it certainly did for me, since I had no intention when initially

>
>And, that would have, what? Been bad? Who cared whether you became a CW
>operator? I learned CW to pass a test. Dropped it right after the test.

I'm sure you did. That took less effort than giving it a fair try on-the-air,
to see if you'd actually enjoy using it. The pity is, you don't know what
you're missing -- and are too stupid to make the attempt to find out.

>So, you were encouraged by learning for a test and I was discouraged by
>learning it for a test. With just the two of us, that's 50/50 odds.

And the difference between us is that I beat those odds by approaching
CW with a mature, open-minded attitude. You've made up your mind
about it without even giving it a fair chance. Typical NCTA laziness.
However, you've got the whining and excuse-making down pat.

>> although I'm not saying it's impossible that
>> I could have in the absence of the requirement.
>>
>
>I think CW is "miraculous" enough and fun enough for people who like it,
>that those who are inclined to use it in the longrun don't need to be
>encouraged by having to learn it for a test.

If you think this is true, PROVE it.

>I wasn't tested for APRS or
>packet, but I've tried both. Can't stand packet and dig playing with APRS.
>I wasn't tested for PSK31, watched my husband doing it one night, shook my
>head in bafflement and never will try it.

What's so baffling about PSK-31? It's got to be one of the dead-easiest
modes to operate, and it's a lot of fun. It's one of the few digital modes
I've tried that really CAN give CW a run for it's money -- though I've still
made CW contacts long after PSK-31 died out on me.

>> After all, it was my
>> umpteenth bad experience with a rabid Ten-Ten number chaser
>> on 10-meters that put me off of SSB operation back in the early
>> '90's.

>You sure are easily discouraged. Imagine me giving up ham radio just
>because of your rabidness on this newsgroup, Larry. That'd be ridiculous.
>You let others win too easily.

My disenfranchisement with SSB was building up long before that
particular incident on 10-meters, which was just the straw that broke
the camel's back, as it were.

>> Of course, if I hadn't passed at least a 13 WPM code test,
>> I wouldn't have been on SSB, wouldn't I? Therefore, knowing the
>> code, and passing the tests, both got me ON the CW bands, and
>> OFF of the phone bands! Talk about your unintended consequences!
>>
>> 73 de Larry, K3LT
>>
>
>Your unintended consequence there is that you seem to think that everyone
>and anyone else must have the same experience as you.

I get that a lot, but I've never said it. All I've ever done is relate my own
personal experiences using CW, from the point-of-view of a person who
may never have done so in the absence of the testing requirement. In
expecting you to understand this, perhaps I'm expecting too much, given
the low intellectual level you consistently seem to demonstrate in this NG.

>Or, that those who
>don't are somehow much lesser a person than you.

More whining. Yawn!

>You can wish forever that
>someone would experience your life, Larry, because you think it is so
>wonderful.

My life is my life, Kim -- nobody can experience it other than myself. All
I'm doing is offering others the benefit of my own experiences. A lot of
people have listened, taken heed, and tried to do things they wouldn't
have tried before -- and succeeded where they never expected to. I guess
that's the one thing I've learned the hard way -- to stretch myself beyond
my own self-imposed limits, and learn that I'm not really limited at all!

>While you are wishing, you may completely miss the beauty of
>their life. I am so tickled just to get someone on the air and into ham
>radio that I couldn't care less if they ever even hear of CW.

Merely getting "on the air" doesn't make a person a ham. It can do so,
but it isn't likely that they will really be fulfilled as a ham unless they
also embrace the growth of the technical and operational learning
experience. Just yakking into a microphone isn't even 1 percent of

that. And someone who admits to "shaking [her] head in bafflement"
at a mode like PSK-31, and vowing never to try it, isn't qualified to judge
me as a ham!

>them is what will keep the ARS in some way viable.

"Their experimentation." Right. What have YOU experimented with lately, Kim -- besides newer and better ways to make a fool of yourself on rrap? What new modes have you developed? Heck, what new modes have you just *tried?* Ever used *any* mode other than FM/SSB voice? Why are you still just a Tech? Why don't you have your Extra, with full HF privileges? You don't have to take any more code tests, so what's standing in your way?

>By the way, those who
>wish to do nothing but pick up the microphone are probably a vast minority

>technologies.

You know, Kim, with a bunch of tired old bromides like that, you could easily run for ARRL Section Manager! However, they do nothing to support your claim of how smart you are!

The FCC (and the law) has made it clear that if the "TV antenna" is
used for any purpose other than broadcast reception they will not
back you up on preemption.

You give bad advice.

If the Association or the Complainer is mean enough and has deep
enouch pockets, they can very well hire an engineering firm (such
as the one that I consult for) to sit and DF the signal. For us
retired spooks, it's like shooting fish in a barrel.

California courts have had a long history of overruling CC&R
proscriptions on things like window shade colors, pets and pickup
trucks, but not one case on ham antennas has been successful - and
it wasn't because we haven't been tryimg for years.

>to to have been a telling point to be able to point out that at
>least one state believes that CCR contracts are not impenetrable for
>good reason,

California had preemption for TV and satellite antennas several
years before the Feds got around to it.

The FCC's claim - rightly - is that CC&Rs are state creatures and
the state can overrule them with inmpunity, but the agency
can't/won't do it on its own without specific direction ("get us
off the hook" from The Congress.

The League General Counsel and I and several other ham lawyers have
kicked this around for many years (we worked on a big California
vase in the 1990s) and we knew what the FCC was going to say long
before the League approached them. What we succeeded in was getting
the FCC to say out loud that they needed The Congress to order them
to do it.

On to our Congressreps....

The ideal is FCC (i.e. federal) preemption...BUT, like the Calif
pet exception, it could also be fought on a state-by-state basis.
Lots more work, but maybe it could lead to federal preemption
once a handful of states did it.

To be more accurate...PRB-1 addresses ALL governmentally
imposed restrictions/zoning. That can be state, county, city or local.

Jim is 100% correct on the CC&Rs not being addressed at all by
PRB-1 and that is because CC&Rs are NOT governmentally
imposed rules/regs, but rather they are part of the contract of
sale for the property...even if you didn't know they existed.

So Phil, if your firm was asked to ferret out a local ham in
a CC&R community, would you take the case for the $$$
or turn it down because of your being a ham and your being opposed
to CC&R restrictions against ham antennas?

Just curious.

The ARRL License Manual was essentially verbatim in a little different form
than the tests. Quoting from the 1957 ARRL License Manual: "If our answers
sometimes seem to the initiated to be naive or incomplete, rest assured that
they are sufficient for the purpose." That means everything needed to pass
the exam was in the License Manual. And it was. I couldn't afford anything
except an ARRL License Manual at the time.

I don't think the advice was offered as a legal way around
the CC&Rs, but rather it was offered in an attempt
to portray the deception as probably being immune from discovery
But, if it was discovered, it would be subject to removal. The advice
offers
just another "stealth" method to generally avoid detection. Such
"stealth" antennas have been advertised/sold for years.

Wrong there, my friend. We tried that approach in the _Hotz v Rich_ case and the First District (California) Court of Appeal shot us down. The PRB-1 Order specifically states in a footnote that it does not apply to private agreements such as CC&Rs, and the appellate court judge's clerk must have read the fine print where the trial court judge's clery must have overlooked it.

In California, the burden of proof for showing that CC&R terms are unreasonable has been on the owner accused of the violation since the _Naarstadt_ case (ironically about keeping pets) which came down from the California Supreme Court after the Court of Appeal shot us down and before the retrial, and the courts have turned a deaf ear to us hams.

That's why the League started the ball rolling to get the FCC to "amend" PRB-1 to drop that exclusion.

Only when all relevant facts about a given statement are known can it be
determined to be true or false. Truth is subjective. A statement in one
context and/or circumstances may be true, while in another
context/circumstnaces, the same statement might be false.

>So Phil, if your firm was asked to ferret out a local ham in
>a CC&R community, would you take the case for the $$$
>or turn it down because of your being a ham and your being opposed
>to CC&R restrictions against ham antennas?

I and the owner would turn it down because it would require us to
do something that we didn't believe in (support anti-ham CC&Rs) but
I can name several competitors' firms who would take it, not that
their work would be as precise, respected, and bullet-proof as ours
is, you know.... <ggg>

But I would be a bad lawyer if I didn't point out the risks to
the person wanting to know if their action was supportable.

You may find that in some states, there is little to no distinction between the
two - especially when a neighbor wants enforcement.

So, you point me to a text where some guy LOST. Furthermore, the 9th Circuit is known for its bad rulings. You don't hear about the cases where the amateur wins, now do you? Why? Because often, it's not news.

My neighborhood has CC&R's too, and my 12 antennas have been up for almost a full 10 years now. A couple of my neighbors asked, I pointed them to PRB-1 (before some of these "adverse rulings"), and even the neighbor who was an attorney BACKED DOWN. Now, part of my situation may also be that I got the CC&R's on my property cancelled by executing the "escape clause" that was in it for inherited property, which some newer tracts don't have in their CC&R's.

My property isn't the only one with antennas now either.

I'm not interested in those losers who aren't skilled enough to make a proper argument in defending their interpretation of PRB-1. It CAN be used to quash CC&R's if done properly.

Ah, the old "state action" argument. The Court of Appeal didn't buy
that one either when we raised it. And this was in a case where the
city government and the homeowners' association were co-terminous.
The city was forced to grant the building permit for Jimmy's 75 foot
tower because of PRB-1 but the individuals as homeowners sued under
the CC&Rs and won.

Unless there is a specific state law that outlaws specific things in
CC&Rs, they are as different from ordinances as chalk is from cheese.

Pardon me too, Joshua, but realize that I do these cases in real
life as a communications attorney and I've heard all these attempts
at subterfuge and they ceased being funny long ago.

Peace, brother.

Looks like he imported all the US calls into his UK database. To get them
on this side of the pond you need to check fists.org webpage. I did, and it
says the list is ACTIVE members only. Maybe they have changed the rules, if
so no one put out the word.
I notice that N2EY is missing, also. I'm pretty sure that Jim joined
after I did, so looks like he is in the same status.
I paid dues and got the newsletter for a couple years after I
signed on, but dropped it then. Wasn't much in it other than new
members stuff, and I already had subscriptions to more ham radio
publications than I could justify. So, looks like I may be considered
an inactive member. Still have certificate #3939 on the wall, though
Sorry. Troll rejected.

More trolling bullshit. You of all people, hold me and anyone
else you choose to the very letter of perfection, then have the brass
balls to make such a claim. The ARRL license manual was a
STUDY GUIDE in which entire pages were used in DISCUSSION
of the theory and background on much of the subject matter.
You're a worthless old lying idiot.

All you proved is that you could bluff your neighbors, and that the attorney in question was a poor attorney for not researching the proffered authority for him/herself. The exclusion of CC&Rs has always been there in black and white.

So you were successful in not having your neighbors bring suit under the CC&Rs. Congratulations. Maybe they didn't care. But beware the Neighborhood Nazi who does, and wants to make a case out of it. That's when we lawyers get into the picture.

Your tactic, albeit successful, doesn't set a precedent or change the law one bit, and I for one am very uncomfortable defending any situation unless it is "bullet-proof" with both the facts AND the law on my side.

>Now, part of my situation may also be that I got the CC&R's on my

Yeah, that gem went away a while ago.

>I'm not interested in those losers who aren't skilled enough to make
>a proper argument in defending their interpretation of PRB-1. It CAN
>be used to quash CC&R's if done properly.

Yeah, and I can ride downtown on the bus without paying the fare if it's done properly, too.

YMMV.

The Fourth District Court of Appeal (Los Angeles) bought the "state action" approach to court enforcement of restrictive covenants. When we tried the same argument relying on that holding in our case in the First District (San Francisco) the justices there wouldn't buy it, claiming that what they did in the Fourth District was not binding on the First District (which it wasn't). _Hotz v Rich_ would have been a slam-dunk had they bought it, obviating a retrial with a different burden of proof which was a disaster in spite of over $100,000 worth

of pro-bono engineering testimony and the pro-bono services of four high-powered lawyers including the litigation specialist for a major California corporation and several communications lawyers..

That was my only significant loss in several decades of comm law.

Sometimes you win, sometimes you don't.

I have asked the same question here and other groups before. No one wants to seem to provide any. I am sure that the tests back in the day when you had to go to a F.C.C. office are unobtainable, but there has got to be some VE teams that have kept that kind of stuff. Not that hams aren't anal retentive now. I know one ham who does the equivalent of a site survey just to figure out where to place the microphone from his rig.....

If ya find any of these tests, or the question pools from years prior to the pools being public knowledge, let me know. I really want to see how many changes in the questions there were to make them "easier." I understand from other hams in my area, that most of the question changes are to improperly worded, or erroneous, or outdated questions.

Speaking of real tests..... If the morse code test is sooo important, there should be 100% copy and nothing less. Then the term REAL HAM would have some relevance as it is flung around so often.

Source record: 34872

I have suggested in certain circles, that maybe as a "happy medium" is to release the Questions only, not the four multiple guesses.... A person would still need to do the research, but would get an idea of what they are going to be tested on.

I obtained the question pools and made my own flashcards after many reads of the instruction manuals. I wrote the actual test pool question on one side, and the correct answer according to the book or other research on the other side. Some of the questions were really easy to complete the answer without research, and other questions I had to do more research. When I was not in an area where keeping a book was conducive, I kept a stack of the cards with me and kept on pounding the information into my head. When I reached a point where I knew around 90 percent of the cards, I went an took the tests. Perfect score on the tech, missed two on the general, and missed the extra by one.

Overall, I believe the suggestion in the first paragraph may be one of many possible solutions.

> could not "memorize the test". You had to know the answer. Note, that

> of Novice material in the ARRL study guide. As I remember, the questions I
> took on my Novice were mighty similar to these questions. After all, how many
> ways can you ask how much power a Novice can run? :-)

And for passing the Novice you got a license that was good for one or
two years
(it changed in 1967) 75 watts of xtal control on tiny slices of 3 HF
bands, plus
145-147 MHz in the days before repeaters. No 10 meters, 'phone was AM
only and
no 'phone at all after the term was extended to 2 years.

And the old Novice of which Ed speaks was a one-shot deal - you could
not renew
it or get another one by retesting. It was upgrade or off the air.

What Ed doesn't say is what the other "study guides" entailed. Also
not
mentioned is the fact that the non-Novice tests included rules
questions
not in the study guides. The LMs had all the amateur regs in them,
too.

--
Here's a compilation of what the study guides involved, and how they
evolved over time.

1951:
Novice: 28 questions, no diagrams - 2-1/2 pages
General/Conditional/Technician: 69 questions, 8 diagrams - 7-1/2 pages
Advanced: 52 questions, 11 diagrams - 5 pages
Total for a General: 97 questions, 8 diagrams, 10 pages
Total for an Advanced: 149 questions, 19 diagrams, 15 pages

1953:
Novice: 30 questions, no diagrams - 2-1/2 pages
General/Conditional/Technician: 70 questions, 8 diagrams - 7-1/2 pages
Extra: 279 questions, 30 diagrams - 25 pages
Total for a General: 100 questions, 8 diagrams, 10 pages
Total for an Extra: 379 questions, 38 diagrams, 35 pages

1962:
Novice: 34 questions, no diagrams - 3-1/2 pages
General/Conditional/Technician: 108 questions, 52 diagrams - 14 pages
Extra: 239 questions, 23 diagrams - 21 pages
Total for a General: 142 questions, 52 diagrams, 17-1/2 pages
Total for an Extra: 381 questions, 75 diagrams, 38-1/2 pages

1968:
Novice: 50 questions - 6 pages
General/Conditional/Technician: 86 questions - 12 pages
Advanced: 51 questions - 10 pages
Extra: 80 questions - 15 pages
Total for a General: 136 questions, 18 pages
Total for an Advanced: 187 questions, 28 pages
Total for an Extra: 267 questions, 43 pages

1971: Novice: 50 questions, no diagrams - 5 pages
General/Conditional/Technician: 61 questions, 33 diagrams - 11 pages
Advanced: 70 questions, 7 diagrams - 12 pages
Extra: 90 questions, 4 diagrams - 16 pages
Total for a General: 111 questions, 33 diagrams, 16 pages
Total for an Advanced: 181 questions, 40 diagrams, 28 pages
Total for an Extra: 271 questions, 44 diagrams, 44 pages

Note the greatly increased amount of material for a Novice or General
in the '60s compared to the early '50s.

Here are some typical questions and answers from the "study guides" of
the 1968 manual:

GENERAL:

Q: What is the impedance of series-tuned and parallel-tuned circuits
at resonance?

A: In a series circuit the impedance is equal to the vector sum of the
resistance, inductive reactance, and capacitive reactance. At
resonance,the inductive and capacitive reactances are equal and
oposite and thus cancel, leaving only the resistance as the effective
impedance. In most tuned radio-frequency circuits, the resistance is
quite low -- of the order of a few ohms or a few tens of ohms. In a
parallel resonant circuit the impedance as viewed from the circuit
terminals is approximately equal to the square of the reactance of
ether the capacitance or inductance (the reactances have the same
numerical value) divided by the internal series resistance. This is
equivalent to saying that the parallel impedance at resonance is equal
to XQ, where Q is the effective Q of the circuit, including loading

effects, and X is the reactance. The parallel impedance is resistive and is usually on the order
of some thousands of ohms.

ADVANCED:

Q: What function does a variable-mu tube perform in an r.f. amplifier stage of a
receiver?

A: A variable-mu or remote-cutoff tube is one designed in such a way that the
amplification factor decreases with increasing negative grid bias. This enables the tube to handle either large and small signals with minimum distortion and
cross-modulation (by proper choice of grid bias). Varying the grid bias offers a convenient means of varying the gain of the stage without introducing undesirable distortion effects. The gain may be varied either by manual or automatic adjustment of the grid bias. In automatic gain control the bias voltage is obtained from rectification of the signal and is applied (usually) to two or more r.f. or i.f. stages so that gain can be varied over a wide range. Sufficient control obtained in this way makes the audio output substantially constant over a wide range of signal levels.

EXTRA:

Q: How is the output circuit of a transmitter adjusted to increase its coupling to the antenna system?

A: The adjustment procedure to use depends on the form of the final amplifier tank circuit. If the circuit is a pi network the coupling to the antenna or load circuit will be increased by decreasing the capacitance of the network's output capacitor. Increasing the output capacitance will decrease the coupling to the load. In either case, the network must be maintained in resonance at the operating frequency by readjustment of the pi network input capacitor, to compensate for the detuning caused by changes in the output capacitance. Coupling also may be varied by adjustment of the pi-network inductance in combination with the output capacitance, but for mechanical reasons adjustment of the inductance in the necessary small steps is seldom provided for in transmitter circuit design. If the transmitter has an output circuit consisting of a parallel-resonant circuit inductively coupled to an output coil or link, coupling to the load may be varied by varying the mutual inductance between the tank coil and link coil. The mutual inductance can be varied by changing the spacing between the two coils or by varying the inductance of one or both of the coils. Coupling increases as the mutual inductance is made larger, and vice versa. Retuning the tank capacitor to maintain resonance will be necessary each time the coupling is varied.

--

Note how much content is stuffed into a single study question. How
many
multiple choice questions do you think could be derived from just
one of the above study questions?

I have a 1957 ARRL License Manual, Dick, and I am talking about it.
Here's a quote: "If our answers sometimes seem to the initiated to
be naive or incomplete, rest assured that they are sufficient for
the purpose." Are you calling the ARRL a liar?

It contained everything needed to pass the exam. Here's the first Q&A
from the General Class section. The answer is the *exact* answer to
one of the questions on the exam.

Q: Name the basic unit of electrical resistance.
A: The basic unit of electrical resistance is the ohm.

That's even easier than multiple choice because there are no incorrect
answers. There were 96 questions on 10 pages.

KC8PMX wrote:
> If ya find any of these tests, or the question pools from years prior to the
> pools being public knowledge, let me know.

You can sometimes find an old License Manual at a Hamfest. They were
in statement form but contained everything needed to pass the exam.
I memorized my way to a Conditional class license. The content was
contemporary for the times and close to the same level of difficulty
as today's exams. The ARRL License Manual covered essentially the
same material as the Bash books. The rumor was that the FCC only
had two exams and that's why they disliked Bash so much. The FCC
could have turned the Bash books into just another License Manual
by having multiple exams covering everything in the ARRL License
Manual.

Some hams with feelings of inferiority have tried to appear superior
by claiming that the old exams were extremely difficult compared to
today's exams. I've been a licensed ham for 50 years, took exams in
the 50's, 70's, and 90's, and that old wives' tale is just not true.
It's the old fart's syndrome: "I had to crawl uphill both ways in the
snow to take my exam and you young folk have it too easy."

writes:

>Maybe you men are just having a hard time with this.

Who is "you men"? Heck, how do you even know I'm a man? Ever hear
of actor James King?

Of course if I made some sort of comment in that vein I'd be "sexist".

I have found that some people take care of things and others tend to abuse
them. Vehicles demonstrate this to an extreme degree - some people make
sure all preventive maintenance is done, and drive carefully, while others
ignore maintenance and abuse the vehicle, then wonder why it breaks
down.

>Let's say I can get a
>European made sound system/stereo that is absolutely reliable.

I don't know of any European sound systems. Almost all of the
consumer-grade stuff I see is made in Pacific rim countries.

If a thing is "absolutely reliable", then it never breaks down. So
repairs aren't an issue.

> The
>components last and last, the sound is beautiful, the workmanship is top
>notch.

I want one of those. My Dynaco stereo components are getting up there
in years, and I've already had to fix one of them.

>BUT, if it ever breaks I have to ship it back over to Europe and pay
>shipping both ways, as well as the inconvenience of the time it would take.

You said it was "absolutely reliable". That means it never breaks.

>Then, let's say I can get a lot less reliable sound system/stereo that has a
>service and repair shop in nearly every major city, and some small towns.

Have you ever tried to get consumer electronics fixed? Most of the time they
tell you to just buy a new one. Repair of those things is often impractical
unless it's something minor.
>
>I'm getting the less reliable sound system, unless I'm just in a really
>crazy mood and take that chance that the super reliable system really *is*
>*always* that reliable.

You said it was absolutely reliable, which means it never breaks.

So what this comes down to is that people should not use CW, drive a reliable vehicle or buy reliable consumer electronics because you might have to ship them back to Europe. Maybe the idea is to keep me so busy fixing things that I won't have time to get on the air or post to rrap.

> I am not a risk taker, never have been.

So the safe path is to buy the unreliable thing and the risky path is to buy the reliable thing. OK.

Not always. "CW gets through when other modes fail" implies always
and therefore is a false statement. Reference: "Introduction to Logic",
by Irving M. Copi

Other modes fail to get through to England from the US on 160m at
high noon. Does CW get through to England from the US on 160m at
high noon?

Why do you guys resist making true statements? Adding the qualifier
"often" to that statement is all that it takes to make it true.

Clearly you never saw a Bash book. They were nothing at all
like the ARRL License manuals. What Bash did was accost
persons exiting the FCC office who had just finished taking
ham radio exams and query them to find, as closely as they
could remember, what the questions were. Sometimes he
came pretty close. Other times his "information" was quite
vague. Some of his "questions" were based on the subject
only with little in the way of an answer. You were alerted
to be familiar with a specific subject. He wasn't able to
get the specifics.

I DID see a set of Bash books, in the late 70's when he was
going strong. I knew a former CBer who used them to get to Extra class. Being
curious about them I asked to look them over. What I
saw was useful to pass the exams but not at all like any other
study guide then in use nor very much like the exact question pools
of today. They were mostly conversationally written, a "study guide"
toward acquiring the correct answers. Nothing more. Most of the information was
not at all precise.
The ARRL License Manuals
included fairly detailed discussion of technical topics. Not the same at all.

And before you troll into it, I had passed the Extra exams long
before Bash came along.

Certainly true, if the word "all" is being implied. But that's not what I asked you. I asked how your example shows the statment to be false. You told someone to look it up in a logic book, and then you quoted from a logic book. But your quote didn't provide the evidence to prove your point. I was hoping your logic book would be able to tell us that the words "all" or "always" are always implied in the English language.

It doesn't really matter what I find. It matters what the FCC finds.
The FCC has found that there is no such thing as federal premption of
private contracts and covenents as regards ham radio antennas.

They are unless specified otherwise. I cannot produce the proof because
I cannot reproduce the symbolic logic symbols.

But here it is in a nutshell.
Premise 1: A is B (B is true)
Premise 2: A is not B (B is false)
A cannot be both true and false at the same time.

That statement calls for a value judgement and cannot be
handled by formal logic. CW getting through when other
modes fail is not a value judgement except maybe in Dick's
imagination.

That's true, Dick. Someone who finds the amateur exams easy to pass is
likely to be highly technically knowledgeable. Of course, you wouldn't
want any more highly technically knowledgeable hams in amateur radio,
because that would show up your own lack of technical knowledge.

So why are you arguing loud and long that it didn't cover the
material on the exams? All one had to do was word associations
and one would pass the exam. No other material required. The
ARRL License Manual said so.

> So see N2EY's earlier post to see what the meat
> of the tests was about.

See Ed's OCR posting of the actual Q&A. Dick, there was nothing on
the exam that wasn't covered by the ARRL License Manual. The answers
given in the ARRL License Manual were *exact*. Pray tell, what good
would non-exact answers have been?

$100 is too expensive? That's my asking price - I'll take half that.

Repairs aren't free, either.

There are mathematical methods of figuring out the break-even point on the risk of equipment breakdown, based on the probability of a failure and the cost of repair vs. cost of prevention. A lot depends on how much you value your time.

So in other words, if one speaks in generalities, and doesn't modify his
statement by saying the words "in general", he is lying (summing this
one with another discussion we had here).

Steve,

It's a good point. But so much of testing SHOULD be based on the purpose of the test. If a test is a hurdle, one needs to keep some semblance of secrecy. If a test is an assessment of where a person is starting, and it can be used to confirm those things thought to be needed at that point, then secrecy is counter-productive. Often tests are used as part of the learning process.

In my humble opinion, most of us view tests as some sort of standard against which to measure everything. Most of us older folks grew up in the time when psychological testing was being touted as the way to sort and select any number of things. We know that, for example, that kids don't do as well on the XYZ test as kids did in the 1960's. Oh, really? Is the XYZ the same test? We assumed that a well-known aptitude test was a measure of how much someone knew (achievement) and even lobbied to compare kids and schools based on those scores. And, as result, the stakes got higher, leading folks to develop ways to "teach to the test." Doesn't that skew the results in some way?

Quite awhile ago I asked whether we had agreement on the purpose of the ham tests, and whether we had ever had psycometrists do any kind of analysis of the reliability or validity of our tests, based on those purposes. What we appear to have is a lot closer to a school-type multiple choice test that is correctly used to assess instruction but becomes used to assign a grade.

The real question here is: Bought by whom?

During my term with a certain federal agency, I was sometimes asked to "review" police officers. The CHP officers were the cleanest, and except for the L.A. housing police division, LAPD in general was the worst, with Long Beach PD a very close second (and second only probably because they have fewer cops; per capita, they were about the same). This was several years before the recent "Rampart Division" scandal whree the public leart about the creation of evidence and other such issues. None of the LAPD officers I reviewed were assigned to Rampart.

Sompe people may joke when one says: "LAPD treats everyone like royalty; ask Rodney King?" Although Mr. King may have been a career criminal, that never justifies the police's treatment of him.

Getting back to our main topic, there is BAD LAW and BAD decisions made every day by the courts. Additionally, cases that make it that far are often the exception, not the norm. Out of all the amateurs I know here in Southern California, I have heard of only one case where an antenna was removed, and that situation didn't use CC&R's as the justification (the [now former] amateur operator lived in a rented property). However, in that case, the landlord simply cut it down; no legal force of a court or anything of the like.

The verbatim Q&A stuff is a direct result of having VEs do all the
testing
and test preparation. This was being proposed by the FCCas far back as
1975.

I think the biggest reason the FCC did not go after Bash was that they
were
going to make the Q&A public anyway.

> > > The ARRL License Manual was essentially verbatim in a little different form
> > > than the tests.

It was in essay form, not multiple choice. There was no indication of
how
many questions of the actual test would be devoted to each subject.
>
> I have a 1957 ARRL License Manual, Dick, and I am talking about it.

I have a whole bunch of them.

> Here's a quote: "If our answers sometimes seem to the initiated to
> be naive or incomplete, rest assured that they are sufficient for
> the purpose." Are you calling the ARRL a liar?

Nope. Your interpretation is the problem. What the LM is saying is
that if you UNDERSTAND the stuff in the study questions you'll have
no problem with the actual test.
>
> It contained everything needed to pass the exam.

All the material, yes. The LMs also said the prospective ham should
study other books.

> Here's the first Q&A
> from the General Class section. The answer is the *exact* answer to
> one of the questions on the exam.

On the exam you took.
>
> Q: Name the basic unit of electrical resistance.
> A: The basic unit of electrical resistance is the ohm.

Is that the entire question? I think not. Here it is:

The first question in the General study guide in the LMs I have is:

"Name the basic units of electrical resistance, inductance,
capacitance, current, electromotive force or potential difference,
power, energy, quantity, magneto-motive force, and frequency".

That's ONE question in the study guide. 10 items in that one question.
How many
multiple choice questions could be made from that one study question?
At least
10.

The test was "about 50 questions, two thirds of which are on technical
subjects." That question requires pure memorization, of course. But
how about these others?

"6. Why is it advisable to use a plate power supply for the oscillator
of a transmitter separate from the final amplifier plate power
supply?"

"7. How does a swinging choke operate to improve the regulation of a
plate-supply filter system?"

"20. Describe the adjustment procedure for proper neutralization in a
radio-frequency power amplifier using an r.f. indicator coupled to the
plate tank circuit."

"32. A low-drift crystal for the 3500-4000 kc. amateur band is
guaranteed by a manufacturer to be calibrated to within 0.04% of its
specified frequency. Desiring to operate as close to the lower band
limit of 3500 kc. as safely as possible, for what whole-number
kilocycle frequency should you order your crystal, allowing 1 kc.
additional for variations from temperature and circuit constants?"

> That's even easier than multiple choice because there are no incorrect
> answers.

Maybe for you. Most people studying a multiple choice Q&A pool have
the sense
to block out the distractors and study only the right answers.

Fact is, though, Cecil, you can't pass the tests I took - and passed.

So what? The questions were all in there along with exact answers.

> Your interpretation is the problem. What the LM is saying is
> that if you UNDERSTAND the stuff in the study questions you'll have
> no problem with the actual test.

So the ARRL was lying when they said their answers were sufficient to
pass the exam? They weren't lying, Jim. I rote-memorized word associations
to pass my Conditional exam. I studied *nothing* but the ARRL License
Manual.

> Fact is, though, Cecil, you can't pass the tests I took - and passed.

Produce one and I will give it a go.

Jim Kelley wrote:
> So in other words, if one speaks in generalities, and doesn't modify his
> statement by saying the words "in general", he is lying (summing this
> one with another discussion we had here).

In logic, generalities must be well defined. Here's a diagram of the CW
statement.

```
+--------------------------------------+
| set of times when CW gets through |
| ********************************* |
| * set of times when SSB * |
| * gets through and CW * |
| * gets through * |
| ********************************* |
| and SSB doesn't get through |
+--------------------------------------+
set of times when neither SSB
nor CW get through
```

Inside the outer rectangle and outside the inner
rectangle is the time when CW gets through and
SSB doesn't get through. Saying, "CW gets through
when SSB doesn't", ignores the area outside of
the outer rectangle and is therefore logically
a false statement.

I've lived in Michigan, Ohio, and Pennsylvania. I've been on good terms with the law enforcement and judicial systems of all three. In addition, I prefer not to live in a state that is subject to rolling blackouts, or where use of one's private property is subject to the whims of a neighbor that doesn't like the looks of your antennas. IOW, you can have the "left coast."

Nice work, Cecil.

In a situation of all things being equal, noting that CW gets through
when SSB doesn't acknowleges a situation that exists in reality.

What about this rectangle?:

```
+--------------------------------------+
| set of times when CW gets through |
| ********************************* |
| * set of times when CW * |
| * gets through and SSB * |
| * doesn't get through * |
| ********************************* |
| and SSB gets through |
+--------------------------------------+
set of times when neither SSB
nor CW get through
```

The statment refers to the innermost rectangle.

When I was on the street with the LA Sheriff's Office (Firestone
Station - unincorporated Watts ghetto) forty years ago we would
never call LAPD for backup unless forced by circumstances - we
never knew what they would do. And this was when they were under
Bill Parker, who had the reputation of bwing Mister Clean and not
standing for such things which seemed to happen anyhow. Not that
the LASO was any bunch of angels, either.

>None of the LAPD officers I reviewed were assigned to Rampart.

One of my co-workers in the late 1950s was the wife of a LAPD
Homicide detective. I got a whole bunch of stories from them.

>Getting back to our main topic, there is BAD LAW and BAD decisions
>made every day by the courts. Additionally, cases that make it that
>far are often the exception, not the norm.

As my Probate Law prof used to say, the reason that the cases are in
the lawbooks is because one or both sides didn't do their homework.
One of the first cases that is studied in California probate law
involves the will of the first Chief Justice of the Cal Supreme Court
that was written very badly.

Not so. The reason was that the attorney that would have had to do
all the work didn't want to get involved in any of it (she's long
dead now).

Dick Bash did his dirty work in front of my office and we had several
confrontations. It was a hot button item for me. Washington OTOH
was 3000 miles away.....

It seems this workaround may have occurred to the legislators at the
time they wrote the bill, evidenced by the fact that they specifically
refer to them as television receive only (TVRO) antennas.

But Herr Trollmeister, you have yet once again skipped over
the point without coming close. Bash made no attempt to cover
any material. He just wanted the questions and their answers.
The material was *immaterial*
Of course you will argue that any rendition of tests and answers
that has as the subject covers the material. Of course that is wrong,
and indeed goes to the heart of exact Q&A pools-they make it
possibled for applicants to pass exams with insufficient knowledge
regarding the material via rote memorization of exact answers to
exact questions without learning. But you and the rest of us already
knew that.

Cecil, I know you're a newcomer and all, so I'll go easy on you. The ARRL Manuals are geared towards understanding the underlying principles behind the FCC exams. The current ARRL Extra Class License Manual clocks in at over 400 pages - with dense text and hundreds of math equations. The other books out there generally just give the question pools with maybe a sentence or two about why the correct answer is, well, correct. A world of difference.

By the way, welcome to the world of amateur radio! Good luck on all your endeavors in the ARS.

As one who has had the opportunity to talk to a number of hams about the neighbor from hell, trust me; they are out there.

The usual advice is to familiarize yourself with the issues, then find a local attorney competent in RF and find out just where you stand. If the stand is CC&Rs, there is almost always no real recourse. If it is local or state law, PRB-1 does enter into the picture, but PRB-1 is NOT absolute. It calls for "reasonable accomodation" and if you are up against a legal process involving it, an attorney is almost a must. I am sure Phil can tell more tales than I, but a recent case in Syracuse NY involved a ham whose town had decided that the ham could put up a tower about a mile away, so their accomodation had been reasonable. A federal judge did not agree. But there is no way in hell that the ham could have prevailed without an attorney who was willing to go the mile.

Well, unfortunately they didn't pass a law like that. Read carefully.
PRB-1 only prevents _governments_ from banning amateur radio antennas
(sort of). CC&R's still can, and do legally ban them. And, the TVRO
law applies only the the reception of television signals. It does not
protect you from someone trying to stop you from transmitting on them.

Ah, yes. And washing clothing is so difficult task no one will learn
to do it unless there is a test to pass which results in a permit issued.

That was non-responsive, Dick. That is what the old study guides said. Do you think that ARRL was lying about the fact that the information in the study guides was sufficient to pass the test?

All I studied for my General was the 16-pages in the ARRL study guide. I passed. I did what most hams do today -- a combination of learning, memorizing, lucky guessing and just plain hoping that a few questions didn't appear on my exam.

No, I'm sure Cecil is lying (with your assistance evidently) about
the meaning of the statement in the ARRL license manual. Of course
all the *information* needed to pass the tests was there. What was NOT
there is the exact questions and their exact answers, save the very few
relating to the definitions such as Ohm, Volt etc which really are
rote memorization of terms. Pure rote alone wouldn't get you a
pass on the exam. Under the question pools it will, still,
not withstanding the improvements you noted some time ago.

Good question, one that is 'somewhat' answered elsewhere. What everyone needs is experience. Without experienced operators that can handle traffic, we might be hurting to supply people for various emergencies - not necessarily of the 9/11 variety. There was a big ice storm in the North East back a few years ago. Stuff happens. The only example of experience vs Q&A manuals comes from my radio and television experience. One question on the 1st class radiotelephone (no longer issued, but was necessary for television) was 'what is the color burst frequency?'. Answers to that question all began 3.579 ... I am not too sure how important that was since it can be looked up, but I can assure you this - once you are at the master switching controls of a television station, the local news is on, they go to the weather, they pop up a chroma-key and the weatherperson's face turns purple .... and the director starts screaming - suddenly you understand that the exact frequency isn't important - the PHASE is!

OK, let me get the automatic antenna switcher installed as soon as it comes in (we actually found on that will switch one antenna automaticall between CB and ham radio!). Then, I'll get on 28.400 every day until we can make contact...it'll have to be after say 4:30 though, is that OK?

It was evidently not necessary to rote memorize the material in the old license manuals. Apparently all you had to do was read the manual, since everything was in there. It's really not necessary to rote memorize the material in the question pools either, in order to pass. I sure couldn't have done that. But to be honest, I really didn't do much other than read the question pools and work the problems before I passed. I looked up anything I didn't understand so I would understand the question, or its answer. Don't you think most people would do the same thing, Dick?

Let me ask you a few things. Presuming you were not a radio engineer or a physicist at the time, how well did you understand tropospheric ducting and ionospheric refraction and absorption when you first got your license? Did you fully understand the purpose of the suppressor and screen grids in a power pentode when you passed? Could you draw a picture of a PN junction and explain about majority and minority carriers? Did you know how to design and implement a plate loading network? Could you calculate (or even describe) the exact effects of end loading for any given dipole antenna installation? How much did you actually know about RTTY? Could you have explained how two co-located repeaters might occupy the same frequency pair without being keyed-up simultaneously? Could you have explained how to use a SSB satellite transponder (if they had existed)? How well did you know your great circles? If a neighbor told you that you were getting into their phone line, their TV, and their record player, would you have been able to eliminate the problems for them?

If you were well versed is all those topics as a result of studying for your exams back then, then I will take your point. If not, then I would like to suggest that things are not ALL that different today. Just more technologically advanced.

So you would favor the Mercedes over the Yugo.

>While the very first brand new car I ever bought all by myself
>was a Yugo (that ran perfectly fine the two years I had it), I would not
>choose a Yugo...neither then nor today.

The first new car I ever bought lasted me 17 years and 3 days. It never
broke down on the road in all that time. Four times it refused to start -
always because I tried to get one too many winters out of the battery.

It was finally traded in, still runing well, because the body rust was getting
to the point where I wasn't going to take any chances.

> I don't think they were reliable at

What won't hold up in court? Your claim that you can't be legally prevented from using a TVRO antenna to transmit based on PRB-1 and the TVRO law? I think we'd all appreciate it greatly if you could actually make that happen. Get off the dime and cut the drivel.

Then any statement that omits boundaries is invalid. That's what
I have been saying all this time. For the statement to be valid,
the boundaries must be defined. There exists a set of times when
CW gets through and SSB doesn't get through. There also exists
a set of times when neither gets through. Therefore, "CW gets
through when SSB doesn't get through", is a false statement.

Good point. When the ham community in NJ took on the
ancient "scanner law" in NJ which dated back to 1934, we
successfully got the old law totally superceeded by a new
law which allowed anyone to have a scanner in a car
as long as they weren't engaged in a criminal act. That
was better than just trying to get a unique exemption only
for amateurs.

Nothing new there. That's why I won't buy in a CC&R community.
Never-the-less, apparently many hams do use "stealth" methods
and get away with it all the time. The number of front page
extremist cases are, apparently, relatively small.

Cheers,
Bill K2UNK

Well, then you must be a nobody, while a lot of people who don't fit into
that category. I've recognized CW as unique since I first ever heard of
it--probably in Girl Scouts.

Well, you're right, you can't force CW on anyone--can't even embarrass them into it. But I think that is much to your chagrin. If you don't have the desire to force CW on someone, then why would you equate a no-code ham as being "dumbed down?" If you have no ultimate goal with your name-calling and attitude toward others who don't share your fervor for CW, then why would you bother being so beligerant about how much less of a ham they are than you? Hmmmm?

I offered the argument: "required" doesn't go with "wanted." The whatever part of that is just that--whatever. If you see it as a match...whatever, not important to me; not my argument, etc.

>

Larry, if I'd given it a "fair try" on the air for years, you'd come up with some inane name-calling about how I gave it up because I am "dumbed down." Why don't you get as equally upset about all the other modes I've never even tried? Does one have to try *every* mode to meet your expectation? Moreover, why do you *care* about it? If all us "dumbed-down" hams had decided we really liked the CW mode and jumped on the air with it...you'd be bitching about the crowded conditions.

>

I'll ask again...why does that matter to you? I also have never tried PACTOR, AMTOR, moonbounce, nothing. Nothing but voice on 2M, 70cm, and the little HF I've done here at the house and on Field Days. That's it. Why aren't you as upset by that, Larry? And, speak of whining and excuse-making, you've got it down as well. You spent someone's money in college for a great degree--to do what with it? Nothing...because you gave up, you took the easy way out and got a bus driving job. So, you succeed in ham radio and you fail at a job market. Why is that, Larry? Why did you waste your time in college and then just get a job that any joe-blow can do? Huh? {For those I just offended, I am sorry--I am just turning the table for Larry--though he'll never get it).

>

And, CW is a dead-easy mode for loads of people...probably yourself. So,
what's so baffling? In fact, you say it's the greatest mode because of its
convenience. Is that why you like it so well? It is beyond your capability
to set up a station other than a CW station? I get it now...easiest
antenna, easiest equipment setup, easiest this, easiest that...who *is* the
lazy one, Larry?

You didn't answer the greater part of that question, Larry, but you dodged it well. What if I gave up ham radio just because of your rabidness on this newsgroup, Larry? You do realize that you are acting exactly as you describe the Ten-Ten folks, don't you? Yep, you are their equal when it comes to the capability to act rabid.

>

No, you haven't Larry. You have blinders on when it comes to your behavior. You have done far more than relate your own personal experiences using CW--you have attempted to belittle, berate, embarrass, and passed cyber-spit all over people who don't share your love of the CW mode. You have done that, everyone knows you have done that, and you know you have done that. You just deny it.

>
> In

All of the key words in the questions were given. Only an idiot
would have trouble picking out and memorizing the key words.
resistance = ohm
inductance = henry
capacitance = farad
current = ampere
See how easy it was?

At 14 years of age in the 8th grade, virtually all of my "learning" was
rote memorization. The only thing I had trouble memorizing were those
darned schematics. I had absolutely no idea what all those squiggly
lines meant.

There always is a clear distinction between the two.

CC&Rs are only enforceable as a civil matter between two
private parties (e.g. association vs homeowner, or neighbor
vs. homeowner.) while state/county/city/local ordinances
are enforcable by governmental action (i.e. violation
notices from zoning, etc.)

Cheers,

Then I didn't get my Conditional in 1952, Dick - but I did, and I did
it primarily through rote memorization of the ARRL License Manual because
I had absolutely no other reference. You have a lot of nerve to accuse
me of lying about something that happened when you were nine years old.

How could I be lying about the meaning of the statement in the ARRL License
Manual? It says what it says. The meaning is absolutely crystal clear.
"If our answers sometimes seem to the initiated to be naive or incomplete,
rest assured that they are sufficient for the purpose." You are the one
who has to lie about the meaning. I just quote the words.

In article <196d8.1637$eI1.439551@monger.newsread.com>, "KC8PMX"
<kc8pmx@NOSPAMdiamondcs.net> writes:

>I have suggested in certain circles, that maybe as a "happy medium" is to
>release the Questions only, not the four multiple guesses.... A person
>would still need to do the research, but would get an idea of what they are
>going to be tested on.

This sounds like a good idea and is basically what was done
prior to privatization of testing of ALL operator licenses. It will
not be acceptible without an extraordinary amount of legal
action on the part of lobbyists. The foreseeable failure of such
an activity can be seen by looking at the nature of the license
itself.

A radio operator license, professional or amateur, is NOT an
academic credential. It is simply an acknowledgement of a
regulating agency AUTHORIZING a licensee to transmit RF
energy in a specific part or specific parts of the EM spectrum
using emissions allocated therein by a regulatory agency. It
is literally no more an acknowledgement of expertise in any
radio endeavor than a driver's license being an automotive
engineering credential or a fishing license indicating academic
credit in ichthyology.

Unfortunately, a god-like mythos has developed in amateur
radio over the last century that has confused "qualification"
and "authorization." The contributing factors to that are:

1. The insufferable pride and self-glorification of a few who use
an authorization as an academic qualification to prove their
"worth" over others. This is especially noticeable among
the non-professionals constantly demeaning professionals
(insecurity and pride as internal motivators) about "radio
knowledge."

2. Promotion by organizations and businesses who make a
profit on "training aids" that implicitly promise the ability
to "pass tests." This includes self-promotional organizations
such as the ARRL who need the financial profit from sales of
publications and goods to maintain their organization.

3. The mystique of the technology itself to those not intimately
involved with radio or electronics. Such appears as a sort of
"magic" since its processes do not involve a direct sensory
understanding such as with machinery. While electric shock

is sensed, the human body cannot quantify anything about the electricity causing the shock except intensity. Physical laws are, to the general human understanding, abstract concepts which go beyond general human life experiences; e.g., no one has traveled at the speed of light (or even close to it) nor been able to pass through most solid objects as do radio waves. The basic radio arts are therefore considered arcane and its practitioners consider themselves akin to more-knowledgeable sorcerers possessing "secret knowledge" relative to the general population.

4. The "territorial imperative" basic to humans ("turf") in regards to "possession" of an ability or skill. The common manifestation is superiority of knowledge or skill based on long tenure in an activity, of being licensed (authorized) long ago under older rules. That becomes illegitimate when they cannot offer any valid proof of knowledge or skills acquired during a tenure in an activity which has been constantly advancing. The ultimate absurdity in "turf" is the personalized rationalization that a turf defender's long-ago standards and practices are the ultimate defining "qualifications" that all others should meet without question. That is allied with (1) above.

>I obtained the question pools and made my own flashcards after many reads of
>the instruction manuals. I wrote the actual test pool question on one side,

Very few methods of study apply to all...but those that have survived years of trial and error/success should all be useful. Success is indicated by passing a license test, the object of all the effort. The method of passing is irrelevant as long as the passing is legitimate and lawful.

Unfortunately there seems to be a fantastic amount of "brand-name bias" surrounding the test process; the ARRL can do no wrong among League supporters, the Bash books are unthinkable, evil things to those last tested before that company began. None have mentioned the license-test "Q&A" hardbounds that preceded all others.

>Overall, I believe the suggestion in the first paragraph may be one of many
>possible solutions.

Logically and by itself, yes. The problem yet unrecognized is that the "problem" with amateur radio license testing is so described only by those who last took tests long ago under different conditions, rules, and a less-advanced state of the radio art. Those critics do NOT regulate radio. The FCC regulates civil radio in the USA. The FCC establishes the final criteria in regulation.

The FCC has decided to privatize ALL radio operator testing (but reserves itself as a final testing agency if there are large disputes). The legal situation involving full disclosure of test questions and

answers is NOT due solely to the FCC nor does it have roots in amateur radio license testing.

To repeat, all radio operator licenses granted in the USA are authorizations to operate, not academic or intellectual ability qualifications. The FCC is a regulatory agency, not an academic agency.

The word "any" includes WHATEVER radio is available.

The only reason for N2EY's "question" is gratuitous confrontation.

>> If I
>>thought there were that many people always "within range" I would also have
>>FRS, GMRS, etc., capabilities.
>

>They are getting popular. An injured mountain hiker was rescued last year
>because his FRS HT was heard 80 miles away by a couple of kids. Love
>that tropo ducting.

Where? Last year a GROUP of mountain climbers were stranded
on Mt. Ranier in Washington. Their rescue was begun after their
FRS HT was heard accidentally by a nine-year-old girl only about
30 miles away. NO "tropo ducting" there, just line-of-sight. It was
in the Seattle, Tacoma, and Olympia papers, made national news.
The actual rescue (by Army helicopters) involved military and
public safety radios, the park service, and three Washington state
agencies.

Why distort the truth?

The US Army has had operational troposcatter radio relay units
for a quarter-century. That is not rocket science, nor is line-of-
sight communications.

>Mobile has its limitations, but home is another story. Ask the folks who
>dealt with the ice storms in 1997.

Ask the folks who dealt with an earthquake in 1994. You should
have no problem since there were at least 10 million of them
directly involved here in January of that year. The only evidence of
ham radio emergency communications appeared in the amateur
radio "press" over a week AFTER the event.

>>I suspect there are many who feel the same way.
>
>Kim, have you ever actually had a QSO on CW/Morse?

Why is that a "curiosity" question?

>Ever originated,
>received or relayed a formal message by CW/Morse?

Has N2EY ever relayed-transmitted a teleprinter message
over radio, any radio? I've relayed-transmitted about 1.32
million of them on HF between 1953-1955..

>Just curious.

So am I. Considering that the commercial communications
carriers and the US military had dropped "CW/Morse" from
fixed-point to fixed-point 24/7 HF messaging by 1948, I'm
still trying to understand "CW gets through when ALL other
modes fail."

If "CW/Morse" is so reliable, so robust, it would seem logical
that the Big Boys in communications would have kept the
mode. The threat of possible thermonuclear conflict during the
Cold War period after 1948 ought to rank as "emergency,"
wouldn't you think?

In my civilian life experience since 1960 I've sent about 7 telegrams and received about 10 telegrams, all over commercial teleprinter-telegraph communications providers. I've never, ever received a "formal" or informal amateur "radiogram." I don't know anyone who has, either licensed in some radio service or not.

Where is this blizzard of amateur "CW/Morse" radiograms blowing?

So then simply by omitting a boundary, one can invalidate an obviously
true statement such as "set of times when CW gets through and SSB gets
through".
That's a useful tool.

> That's what
> I have been saying all this time. For the statement to be valid,

But that implies that CW doesn't get through when SSB does get through,
which is also a false statement.

:-)

Because how far would one go in seriousness to "be prepared." Do I equip
myself for each and every emergency that might come up? Do I buy the means
to use every mode available to use in ham radio in case of an emergency? Do
I become a doctor so that I may be fully prepared for an emergency?

The line is drawn at what one is comfortable giving. I don't plan on ever
sitting or standing around in the Texas heat while what I think is a
dumb-#$%@ biker wants to race. I would, though, never give my willingness a
second thought for a true emergency in the heat.

Back to radio. CW only works "just as well," Jim, if one is skillful or at least somewhat knowledgeable of its use and can intelligently use the mode. I don't do either, and don't wish to. I also don't wish to equip myself for packet (outside APRS) or mobile AMTOR, etc.

I bought what seems to be the most reliable pickup truck on the road. I
didn't buy it for it's reliability, however, I bought it for its looks. The
truck that appeals to me most as eye candy is the Toyota Tacoma. So, I
bought it. Now, the guys at work tell me that I have the most reliable
truck on the road....is it? Even if it's not, there's a Toyota dealer on
every corner, so I think I'm safe...

I don't know about y'all, but it seems to me that every Field Day I've ever paid attention, when the bands die, the bands die...for all modes. I've seen voice go first, but CW will even fade fairly quick as well...

Hey, if you say you're a newcomer, I take you at your word. Capiche?

May I suggest the ARRL's "New Ham Companion"? Really a great collection
of articles from QST. After that, you may eventually want to step up to
the ARRL Handbook - although since you're still new, it may be a bit
overwhelming to you right now.

And the FCC will skin yours (not issue a Declaratory Order of
preemption) if you do the above scheme. Their viewpoint is
EXCLUSIVE use for broadcast, and no other radio service.

Good try, though. Better luck next time.

See my answer to another post and read Section 1.4000 and the
Memorandum Report and Order and the relevent Public Notices and
Decisions on OTARD cases. They're available on the web.

>Even though your are an attorney you are wrong on this point

What Points and Authorities back up your statement? Are you an
attorney who does work in the field of antenna permits and siting
as I do?

>the association will not be able to win. The antenna is used for reception
>of commercial TV stations, a free speech issue.

The OTARD pre-emption has nothing to do with "free speech". It has
everything to do with "marketplace forces" and "leveling the
playing field". Read the legislative history.

>The use for ham radio is
>irrelevant, the law does not saw that you can not use the TV antenna for
>other reasons.

The pre-emption Memorandum Report and Order (3 CR 1308) is very
specific in what transmission and reception uses the antenna in
question may carry to qualify for pre-emption. Non-broadcast/video
service related uses are NOT covered. Section C Paragraph 39 of the
MO&O discusses this at length.

>The association can file suit to rant and rave, but as long
>as I am using the TV antenna for reception of TV the use for ham radio is
>irrelevant.

The FCC won't back you up. Read the literature.

> The key is to actually use the TV antenna for reception of TV. Now if
>someone solely uses it for ham radio then the association can claim the
>antenna is used for ham radio.

> Another way to look at this is if someone has a TV antenna they use for TV
>and SWL. Are you saying it is violating the rules and law to hook up a SW
>receiver to the TV antenna on occasion?

The question is whether the FCC will issue a Declaratory Ruling that
the antenna meets the requirements of its MO&O and therefore
complies with Section 1.4000 of the Rules and the Association is
preempted from taking adverse action. Read the material to see
what they will or will not accept.

I would never embarass myself or a client by taking such a case
to them knowing in advance that they won't, and I have reprsented
both users and associations in my practice (not in the same case,
although I have mediated a few cases).

>The court will not be able to say you can't have a TV antenna and use
>it for SWL. The reason is the main purpose is the reception of TV
>signals. As long as you are using the TV antenna for actually
>receiving TV signals then the use for SWL is irrelevant.

The Congressional legislation is specific on which services qualify
for pre-emption. The FCC Rules, cases, and the associated Declaratory
Orders are specific on which services qualify for pre-emption.
Amateur radio is not one of them. SWL reception is not one of
them. Believe it or not, FM broadcast reception is not one of them.
The definitions are that specific.

> I know hams and SWL's that today use their TV antenna for use on the
>ham/SWL bands, but the main reason for the antenna is because it is used for
>TV.

If the Association does not complain, then they are permitting it,
case closed. If they object, what legal grounds does the user have
if the FCC will not support them? None.

Don't get me wrong. I passionately want to have CC&R
restrictions on antennas preempted for all uses, but the
OTARD law and Section 1.4000 as it stands won't give it to us,
and neither will the "subterfuge" methods which you advocate.

>think the courts would rule that such a law is legal or *reasonable*?

The courts look to the intent of The Congress which in the case of
OTARDs is very clear as to what services get protection and why.

>If you do then you must have graduated from the draconian school of law. ;)

I've been around communications law cases long enough to see what
the FCC and the courts will do in cases like this. I was quite
fortunate to have several judges as law school professors and
mentors so I learned what things courts would buy and not buy
early on. One principle that I learned was never to go forward with
a case when the law is against you and you have no grounds to
get the court to change it.

> over radio, any radio? I've relayed-transmitted about 1.32
> million of them on HF between 1953-1955..
>
> >Just curious.

Now note, using Cecilian logic, Len states HE relayed-transmitted....(cars are black, etc)

Let's do some math

If over 2 years.........

That comes to 660,000 per year

OR

1808 per day.

Assuming that Col Len is a sleepless superman, that means that Len, was responsible for relaying 75 teletype messages every hour or 1 1/4 messages 24/7 for 2 years.

Or, if Len counters with, IT'S NOT 2 YEARS, IT WAS OVER 3 YEARS TIME...

OK...that's 440,000 per year
1205 per day
50 per hour or
just under 1 message every minute 24/7 for 3 years without a rest

I thin not Lucy.

Dear Santa,

For this coming Christmas, please send me a calculator that actually works

Love Len HA
.

I learned that most people only want the license and will do
whatever is required to get it. For some it's not difficult, and for
others it's nearly impossible. But I never saw anyone who was
determined to do it that failed. I remember one older gentleman
that came to 10 different sessions before he took home his General
and each time he got the encourgement required to keep him
coming back. He lived 75 miles away, but I still remember his name.

>Let me ask you a few things. Presuming you were not a radio >engineer or

>
> If you were well versed is all those topics as a result of studying for
> your exams back then, then I will take your point.

That depends entirely on which test you're talking about. Of course
initially I was as uninformed as most newcomers are. But when it came time to
go for the Extra, I did indeed have a pretty good knowledge base built.
Today, that's not required for Extra. Just
read the pools.

> If not, then I would
> like to suggest that things are not ALL that different today. Just more
> technologically advanced.

I think Jim N2EY said it best, in that since you had no way to know
how much of what subject you would be tested on, you tended to make sure you
were prepared. The trip to the FCC district office
was not trivial, and today much of the time the trip to the VE test probably
is.
I've said before that studying for a ham radio license then sure didn't
turn anyone into anything like an expert. But with a few years as a
Conditional/General class ham behind me, when I landed in the Army Signal
school in a 6 month course of study that took us from electron
theory through color TV studio equipment, Vidicon and Image
Orthicon cameras and microwave links, I quickly found that I was
way, way ahead of everyone else in the class except for one fella who already
had his First Phone, and another who had 2 1/2 years
of EE college program behind him. The three of us finished the top
three, all within less than a single point separating us. So I learned
that my ham radio technical training, while quite incomplete, was
indeed a very good beginning, and I *did* know a bit of radio theory.
Not on an design engineering level, but certainly on a technical level.
Some of it was gained in the few years following licensing, but by
no means all of it. No one ever said study for a ham license affords
a high degree of skill. Perhaps that's a big part of the reason it concerns
some of us to see evidence that it has slipped further.
When a VE team tests in an area where lots of technical people
reside, the technical level of applicants will be much higher than
it is where few technically oriented people live. Yet the national
pass-fail average was 66% when I served as a VE, and our team's
average always was almost exactly the national average. Yet there
were few technically trained people in that rural area, and most
new hams did indeed come from CB. Either the tests are easy to
pass and applicants easily learn the material, regardless of their
lack of technical background, or the tests are easily compromised.
An area where lots of highly trained persons live should have a
higher pass-fail ratio. It doesn't seem to be working out
that way. So one can deduce that evidently the tests don't test for
knowledge, rather mastering testing technique. Or else they're dead-
easy, and that's perhaps just as bad.

Why indeed? Simply - to match questions and answers so that
at least 70% of them match correctly.

You've got it bass-ackwards as usual. It was the Extra class that
got dumbed down.

I have glanced at the one in the ARRL library. It ranges from being a bit more specific than the Q&A examples in the ARRL study guides to "this answer is wrong but the FCC says it is right" to "beats me." I recall when I looked at it, I wondered what all the hoopalah had been about. That could be just a first impression, though.

Of note, there are more correct answer in the current entry-level question pool (Tech) than there were sentences in the Novice study guide of 1963. I haven't counted the questions for the general. In reading the question pools of today, you are probably getting more information than you would have gotten in 1963.

>sure couldn't have done that. But to be honest, I really didn't do much

Sounds reasonable to me, too, though all I recall studying for my General was the General study guide. Like many Generals today, I had been fairly active as a ham before taking the test.

Yes, but when you took your Extra, did it grant any extra priveleges other than the ability to get a 1X2 call, or was it a vanity accomplishment like it would have been in 1964 for me?

And I contend that you could not pass a test that had a question pool the size of today's amateur pools on a subject you knew nothing about. Are you ready to try it with 1000 definitions in Russian to prove me wrong?

I think that even you manage to take meaning from context, Cecil, otherwise you could never understand anything. Otherwise one could never make most statements about cars without being "invalid," or more complex than we find in normal conversation. "Cars have wheels" cannot be said under the rules you have set up because there is a car in my yard up on blocks, making the statement "invalid." If rules of logic are enforced to the point of absurdity, then discourse comes to an end.

>inherited [some cases; not all], tax sales, foreclosure sales, etc....).

I am not an attorney, so I don't know how the fine points of state law may apply in each of the 50 states, but I believe your premise to be flawed. The person giving up the inheritance may do so involuntarily, but I don't believe one can inherit real property without agreeing to do so. If so, do you thini the law would force you to involuntarily inherit a polluted property with less value than the cost to clean it up?

Ditto with tax sales and foreclosures. The person obtaining the property does so voluntarily.

Nice try, but if it was that easy, do you think that everyone would be making all this fuss?

Yes, and that law clearly says that if the antenna is used for any purpose
other than OTARD, it is not pre-empted.

> You can have a phone, but you can't call Nevada on it and if you do the
>courts will come after you.

No, you can have a phone, but you can't put 100 watts of RF onto the phone
wire. :-)

>The ARRL will sit around defending this law with Phil
>leading the charge.

> Good Lord, Why do I support the ARRL at all?

Because ARRL is not defending this law at all. They have expended considerable
resources with the FCC trying to change it and now that they have been told to
take it to Congress, they are taking it to Congress.

Why would you take a clear explanation of a law that Phil says he doesn't like
as "defending" it?

> What the
>congress and FCC are saying is that you are a criminal if you also
>use that antenna for other purposes

No, what congress and the FCC are saying is that they will not pre-empt the CC&R on that antenna if it is used for other purposes. At that point, your liability is civil, where the other side has to prove its case by a preponderance of the evidence, if my layman's understanding is correct.

>What gives the Congress the right to
>tell me how to use my private property in a legal manner?

The US Consitution has empowered Congress to enact laws. Ditto with state constitutions for state lawmakers.

And Congress is not telling you how to use your private property in a legal manner; it is saying that it will not pre-empt the CC&Rs that you accepted when you purchased that property if you have an OTARD antenna that is also used for other purposes.

And that notwithstanding, there are plenty of laws that tell me what I can and cannot do with my property. If I build a garage, I cannot do so less than 10 feet from the side property line, or 35 feet if it is located even with or in front of the house.

> The Congress can say you can have an antenna in your
>private home, but they can not tell you how to use it as long as the use is
>legal.

The US constitution tells me I can have a gun in my private home, but there are plenty of laws that tell me how to use it.

> You can have a printing press, but you must only use blue ink to print
>newspapers is what they have done.

There are plenty of things that I cannot print on a printing press. And we have a lot more than CC&Rs and pre-emption backing freedom of the press. And guess what, if there is a CC&R prohibiting business equipment on a residential property, that freedom of the press issue doesn't help. I may be able to use that press for personal printing, but the minute I go commercial, I am in violation of the CC&Rs. Claiming that I also use it for legal personal printing will not get me off the hook.

It is a bad law, but flouting the law is not the answer.

From: Keith nospamplease@newsguy.com

> I see so the law is against private property rights and if I use my legal
>antenna to listen to 90.3 MHz I am a criminal.

The antenna is neither legal nor illegal. If there are CC&Rs that prohibit antennas, they are either pre-empted because the law pre-empts CC&Rs for antennas used for reception of some broadcast signals or not pre-empted because antennas that are also used for other purposes do not have a pre-emption. The law is pretty clear.

If it is violation of the CC&R, you are not a criminal. This becomes a civil matter; the homeowners association or other affected party can seek remedy through the courts, or, even worse, depending on the contract you signed when you bought your property, through its own bylaws, some of which can be truly draconian.

>but they can't come along and throw me in
>jail for listening to Radio Moscow on that same antenna.

You are correct, the government will not put you in jail. You may, however, be the subject of a civil action, not for the act of listening to Rado Moscow, but for putting up a multi-purpose antenna that is not permitted under the private CC&R you bought when you bought your property.

In article <a54phb0r6o@enews2.newsguy.com>, Keith <nospamplease@newsguy.com>
writes:

> It is my private home and property and if I use the antenna to
>receive broadcasts on 88.6 MHz or Radio Moscow they have NO say in the
>matter. The antenna is legal and I can listen to any radio transmission I
>please, TV's broadcasts are radio transmissions in case you are not aware. I
>can also use my private property to legally broadcast radio signals.

We are talking about CC&Rs, not ordinances or other laws. Since I am a
layman, not a lawyer, the following is in layman's terms as I understand them.

CC&Rs, in this case specifically deed covenants and restrictions, are not laws.
They are private contracts. When you signed on the dotted line to buy the
property, you agreed by legal contract to abide by ALL of the restrictions.

What the FCC's preemption does is to state that TV reception from
broadcasters and satellite services meant for direct reception is a legal
right of homeowners that cannot impeded by CC&R. (You can't make a
legal contract that impedes certain rights). But the FCC's exemption ONLY
extends to TV reception. And they only did it because Congress told them to.

> What
>you are defending is the intrusion of the government into my home.

To enforce contracts that YOU freely signed when you bought that home.

> As long as that antenna is within the bonds of the law then I can do with
>it as I please as far as reception or transmission of radio signals. It is
>not the place of the government to make it illegal for the lawful use in
>regards to radio signals.

The govt. isn't doing that. You did it when you signed the paper to buy the
place
with anti-antenna restrictions.

> You can have a phone, but you can't call Nevada on it and if you do the
>courts will come after you. Geez, talk about an apologist for draconian
>laws. No wonder the ARRL is unable to be effective, you can't see the forest
>for all the trees.

In many areas you can't have a business in a residential district. Same
principle.
You can have your neighbor's kids over every day after school, but if you
charge money it becomes a day care business and there are different rules.

> You can scream the history of the law and all kinds of neat things, but it
>is my private property and I can do as I please with it.

I wish it were that way, wrt antennas.

> Come and get us FCC & FBI I want to blow this portion of the law out of the
>water. Of course, The ARRL will sit around defending this law with Phil
>leading the charge.

Just the opposite - ARRL and Phil have been leading the charge to get the FCC to extend the law to cover ham antennas.
>
> Good Lord, Why do I support the ARRL at all?

If you understood the issue, you'd know.

>I think your deliberately misunderstanding, Jim.

No, Kim, I'm trying to understand what you wrote. That's all I have to
go on. Your philosophy seems to be that people should not rely on
that which is reliable but rather on that which is fixable.

>As usual...

Seems to me that when someone doesn't understand and agree with
your posts, you put the blame on them, rather than consider that
perhaps what you said wasn't clear, or perhaps isn't entirely logical or
based on fact.

Not for every conceivable emergency. For the ones that are most probable and
would be the most damaging, a prudent person becomes prepared.

> Do I buy the means
>to use every mode available to use in ham radio in case of an emergency?

Nope. Just the most common and effective ones. As well as the license and
skills to use them.

I think one of the things that bothers some people about CW/Morse is that
the skill to use it cannot be bought.

>Do
>I become a doctor so that I may be fully prepared for an emergency?

If preparation for a medical emergency is a concern, yes. But as radio
amateurs we're talking about communications emergencies.

>The line is drawn at what one is comfortable giving.

In any volunteer activity, that's all that can be done.

Based on what youdefine as a true emergency. Again, that's all that
can be done in a volunteer activity.
>

I don't understand. The cell phone is usually most reliable. It should be the
first thing to try in most cases, unless there is no service or the system is
overloaded.

>>
>> Kim, have you ever actually had a QSO on CW/Morse? Ever originated,
>> received or relayed a formal message by CW/Morse? Just curious.
>>
>> 73 de Jim, N2EY
>
>One-half QSO, the night I passed my 5wpm test.

What is "one-half QSO"? Started but not finished?

>No, never done any CW
>traffic, never did CW after that night.

I don;t mean to be critical, but that strikes me as kind of like the person
who learns to drive a manual shift car around the parking lot in first gear,
stalls it when trying to shift to second, and simply says "not for me" and
walks away. Of course in a voluntary activity, there's no requirement for
doing any mode.

For the record, I've done QSOs and formal messages by CW/Morse,
voice (SSB, FM, even AM) and RTTY. RTTY in the paper-tape days was
a slightly different animal than, say, PSK31, but lotsa noisy oily smelly fun.
The neat thing about it was that once the system was set up it was almost

completely automatic for the relaying of messages - little or no operator involvement at all. Yet it is little used in amateur emergency comms.

> 73 de Jim, N2EY

The Arrl and Phil Kane, Chris Imlay should concentrate on other Amatuer Antenna Issues first before they tackle CCR's, since these people knowingly agreed to this when they signed on the dotted line. There are many towns with height restrictions of 8' off the ground or building to which it is attached which effectivly precludes effective amatuer communication. How would you like your town to tell you that you cannot erect an antenna higher than 8' on your property and less than 200' away a 150' cell phone tower was erected that you have to see everyday you walk out your front door.

Phil has said that he doesn't CC&Rs that affect amateur antennas at all.

> Yes, the government can over rule a CC&R regarding
>an antenna, but it can not tell the private home owner or apartment dweller
>you can't receive any other type of radio transmission except TV.

Unless you expend more than just bits on a newsgroup, yes, as the law is written, you cannot obtain pre-emption for an antenna that serves more than OTARD purposes.

The government is not telling you what to do in your home, it is just telling you that some of what you do in your home is not pre-empted from the CC&R contract you signed when you bought your property.

>> What you are defending is the intrusion of the government into my home.

>To enforce contracts that YOU freely signed when you bought that home.

Just to be clear, the only role the government will play in any CC&R difficulties he finds himself in over multi-purpose antennas is to provide any aggrieved parties access to the civil court system to address their grievance. They would do the same if his neighbor tripped over his rug.

The enforcment of a wide range of contracts are a civil matter, with long standing in law.

He does have every right to try to get the law changed. He is just advocating a method that I don't believe will be very effective.

I think most people do a mixture of rote memorizing, learning concepts,
developing new skills, and vague word association. The difference is that
having the exact Q&A in front of you makes it much easier to pass by rote
memorizing and vague word association.
>
> Let me ask you a few things. Presuming you were not a radio engineer or
> a physicist at the time, how well did you understand tropospheric
> ducting and ionospheric refraction and absorption when you first got
> your license?

Well, I was 13 and had just entered the 7th grade. I knew tropospheric
ducting could cause VHF/UHF DX, but that was about all. I knew the
ionosphere had layers with the names D, E and F, and that D absorbed,
E and F refracted/reflected, and that F became F1 and F2. I knew the
day/night and 11 year solar sunspot cycle connections, too. I didn't
know lots of detail but I knew the basic concepts and how they played
out on the air.

> Did you fully understand the purpose of the suppressor
> and screen grids in a power pentode when you passed?

From a practical point of view, yes. Not from an electron optics
point of view, though.

> Could you draw a
> picture of a PN junction and explain about majority and minority
> carriers?

Yup.

> Did you know how to design and implement a plate loading
> network?

You mean an impedance matching network for a transmitter?

> Could you calculate (or even describe) the exact effects of end
> loading for any given dipole antenna installation?

Yup.

> How much did you
> actually know about RTTY?

That it existed, used FSK, and was pretty much limited to those hams who could afford to buy the machines or get them through MARS and other channels. I knew what it sounded like on the air, too.

> Could you have explained how two co-located
> repeaters might occupy the same frequency pair without being keyed-up

As a national regulatory matter, that has been addressed by the FCC through
PRB-1. Although ARRL would like to see it strengthed, it has been a very
effective tool with local governements who have regulations that unduly
restrict amateur antennas.

See:
http://www.arrl.org/FandES/field/regulations/antenna-restrictions.html

for information and resources.

No, no, no, using the words, "the set of times", implies that there
is another different set of times somewhere. "CW gets through" doesn't
imply any other set of times - it implies the set of all times.

Simple - to pass the tests. You make an erroneous assumption that
most applicants want to learn the background material. Wrong.
The objective is to get the license. If it can be done without
learning
the material most will do it that way. Ask Kim. Or better yet, find
her earlier posts on the subject and read them, that way she won't
be able to modify her story.

I truly believe you have a good point, though I wouldn't want to guarantee it
would be upheld in any court in our
bought-and-paid-for judicial system. Remember, judges are only
lawyers with political connections. Sometimes those connections
call in chits..... Of course some are too independent to make rulings
that way. Many obviously are not.

Actually, I believe you have a case that could be won in court here.
Of course the problem would be taking it through the court system to
a point where it could be won. That would cost a LOT of green stuff
and is the biggest reason it probably won't be done.

That seems to be a very good point. To say that you may have
a particular antenna for the express purpose ONLY of watching
TV and if you decide to also use it for other purposes you are in
violation would seem to be completely in violation of your
rights to use your own property. Surely somewhere there is a court
that could and would rule in your favor on this basic point. Paying the
bill and finding that court is your problem.

I knew what a resistor was and that it obeyed ohm's law but I had
absolutely no idea what a resistor did or why it was placed where
it was in a circuit. It was a very large conceptual leap to realize
why a cathode resistor was really needed in a single supply amplifier.
I didn't learn that until college.

I wasn't even interested in the Extra license until Incentive Licensing was
instituted.
I already had all privileges with my Conditional. "Vanity" meant
nothing to me, and for sure it wasn't worth 520 miles of driving roundtrip to the
FCC office and an overnight stay to make sure I
was there by 9am on test day. Add to that the fact that I knew that
since I held a Conditional Genenral license I would be required to
retake everything but Novice. So I would get General, Advanced
and Extra writtens, plus 13 and 20wpm code tests. Which is how it went. I took and
passed -all of them- in a 2 1/2 hour test session.
I did it because I want all frequency privileges back.
Does that anwer your question?

>
>
> And I contend that you could not pass a test that had a question pool the size

"Cars have wheels" is not likely to be misunderstood. "CW gets through
when SSB doesn't" is more likely to be misunderstood. What is wrong with
adding a simple five-letter word to make the statement accurate?

CW gets through when SSB gets through.
CW gets through when SSB doesn't get through.
SSB *ALWAYS* either gets through or doesn't get through.
Therefore: CW *ALWAYS* gets through.

I want new hams to use CW but I don't want them to think CW has
supernatural powers. What is wrong with the statement:
"CW often gets through when SSB doesn't get through."?

> release the Questions only, not the four multiple guesses....

Nice idea, but how would it work in practice unless the FCC took over testing
again?

The way it has worked since 1983 or so is that volunteer amateurs write the
actual Q&A, and submit them to the FCC for approval. Volunteer examiners
make up the tests and grade them. The whole thing is publicly accessible
and wide open, which also makes errors in the system stick out and be
corrected.

How would you maintain the secrecy yet still permit the VE system to work?
What would prevent some "Son Of Bash" from adding the answers?

And the entire Q&A pool would have to be completely re-done because the
existing pool is already known.

Seems to me the only practical thing is for the FCC to take over testing. And
I'm all for that. But the only way to get them to do it is to convince the FCC
that the VE system is not working. Simply showing that today's tests are much
easier to pass isn't enough - the FCC can simply say "So? What's the problem
with easy tests? The major enforcement problems in the ARS are operating
issues, not technical or ones".

In the restructuring the FCC reduced the number of written tests and the
overall amount of testing needed for any amateur license. That says it all.

The words, "set of times", in the above segment *IS* stating
the boundary conditions because it implies a set of times when
CW doesn't get through. Nothing wrong with the above segment.

Memorizing a single formula will get the answers to 1,000
questions? Gee, I had no idea...

>
> I know that you think that ham radio should be work instead of fun, so that may
> explain why you are trying to convince people to memorize the pools.

So it's very easy for you to sit there and discount the experiences of
others on the basis that you haven't had the experience yourself, of seeing the
evidence. And BEING TOLD THAT WAS WHAT WAS DONE. When one of the "memorizers" on
this NG states in no
uncertain terms that SHE had done exactly that, and
learned nothing from the process, you totally overlook it. We see
where you're coming from.
Meanwhile I get accused of trying to
convince people to do what they have been doing all along, and what I finally came
to realize, as a VE, they were doing.

You're quite a perceptive fellow, Ed. You perceive exactly
what you want to perceive.

> The objective is to get the license.

Of course, the objective is to get the license and that has always
been the case. When I got my Conditional in 1952, the objective was
to get the license because my Novice license had expired. The most
efficient way to achieve the license objective is to learn the
minimum necessary to pass the exam. I cut it too close and flunked
my first Conditional exam. I studied a little more and passed it
30 days later. I recognized then as I do now that most of the worth
of an amateur license is in the privileges granted. If I had waited
until I understood the material, I would have had to wait for another
six or seven years. I rote-memorized my way to a ham license in 1951
and 1952. I understood the material when I later passed the Advanced
and Extra exams.

Nope, Dick, you have it backwards, as usual. Human nature has not
changed. People will tend to learn the absolute minimum to pass
the exam. That has been true ever since there have been amateur
license exams. You are accused of trying to convince people not
to do what they have been doing all along and it is a losing
battle. Nobody is going to choose to do more work than is necessary
to achieve the goal.

> I don't know, Jim. Are you really going to base whether you can do
> something or not, on what someone else does?

You do it all the time. For example, consider the following:

"I didn't buy it for it's reliability, however, I bought it for
its looks. The truck that appeals to me most as eye candy is the
Toyota Tacoma. So, I bought it."

Of course you don't see how the truck looks on the outside while
driving it - only other people do. So choosing a vehicle by how it
looks is really an

exercise in wanting to project a certain image to other people, and
hopefully get a desired reaction. So your choice of vehicle was
largely
driven by what others do (reaction to its appearance).

> Yes, I can still drive a
> standard...if I want to run around with a painful back all the time.

Must be some sort of serious problem if shifting and clutching a
Saturn
or similar car causes constant pain. Sorry to hear that.

The same is true of any mode. The point is that CW/Morse works better
than
many other modes (mostly voice modes), given equivalent levels of
skill in
the operators.

> I don't do either, and don't wish to.

The discussion was about choosing reliable vs. unreliable things. It
seemed that you were pushing the idea of choosing less relaible over
more reliable.

You HAD been talking about using the antenna for ham radio. Now you're
talking about listening to radio broadcasts. Broadcast reception is
what the legislation provides for, so that really isn't even an issue.
But I do understand why you've switched topics.

>Ditto with tax sales and foreclosures. The person obtaining the property does
>so voluntarily.

But a "person" obtaining a foreclosure usually does so by buying the property from the bank which foreclosed at auction. The bank isn't subject to the CC&R's. One of the properties in my tract was foreclosed on (30 years ago), and the people who bought it told me that during escrow, they were informed that the CC&R's that originally existed had been voided by the foreclosure. I have these details because their son is a licensed amateur and one of my friends. (The CC&R's themselves did not have a provision regarding foreclosure - their voiding was an operation of state law due to the foreclosure).

>Nice try, but if it was that easy, do you think that everyone would be making
>all this fuss?

Many people don't buy previously foreclosed properties nor acquire them via tax sales.

No you didn't. I included a quote of what you did say, but I notice you deleted it. You said "The FCC and congress passed a law saying CC&R's can not ban ham radio antennas, but if hams use the antenna for SWL or TV
then the FCC and law doesn't allow it."

> They can't pass a law to allow antennas for the reception of radio

Using your "installed" TV antenna to receive or transmit in other
services is not against the law and the government is not saying
that you can't do it.

The issue is whether the FCC will pre-empt the CC&R provisions and
keep the Association from banning the antenna installation or not.
There is no criminal component in any of that.

Until and unless the legislation gives the FCC the clear direction
and authority to pre-empt the terms of a CC&R provision, courts are
not going to order the FCC to do so. _Shelley v Kraemer_ this one
isn't.

> It is my private property and it is legal to listen to NPR or Radio Moscow
>on that antenna. You can have a antenna, but you can't receive 90.3 MHz on
>it is what the government is saying.

What the "government" is saying is that if you do so you are on
your own with regard to wrestling with the Association and its rules.

Are you not understanding the process, or are you playing the
complete fool?

You sure can, but you will be on your own when 'rassling with the
Association and its rules. You won't have a piece of paper from the
FCC telling the Association to "cease and desist" nor will you have
the ammunition that you will need if you were to bring suit to force
the Association to let you do that.

In the 70s there was a cartoon that said "Is it OK to wear jeans in
school? Yes, it's OK to wear jeans in school. It's just not OK to
wear jeans in THIS school."

Same same.

> Come and get us FCC & FBI I want to blow this portion of the law out of the
>water. Of course, The ARRL will sit around defending this law with Phil
>leading the charge.

Are you blind or just dense? As a lawyer I can read, research and
interpret what the law says with skill and authority, but all the
screaming and posturing in the world is not going to make it say what
it doesn't say.

I am passionately in favor of complete pre-emption with regard to
all antennas of any type and use. but this law doesn't provide it,
and the FCC was very clear recently about their refusal to exert
such pre-emption absent clear directions from The Congress.

No they can not. The Defense of Laches (failure of the Association
to act) applies only to the non-conformer. It does not confer the
same rights on others. Basic California civil law.

What California law school did you graduate from?

Those safe harbors went away in California quite a while ago,
obligating the devisee or purchaser to do due diligence.

More full employment act for us lawyers..... <ggg>

Another misconception. The 8 or 12 foot limit is that which requires
no permits of any type - just go ahead and do it. If it falls
down, it's your roof that will be damaged.

Higher than that, the municipality can require a building
and/or use permit (some do and some don't) and the terms and
procedures for thise permits must afford a reasonable
accommodation per PRB-1 and/or state law. If they deny you a
permit they have to tell you why and offer the opportunity for
a hearing or appeal. This is known as "procedural due process".

Hey, be glad that there is a cellphone tower there - most local
municipalities are far more restrictive of them than they are
of ham towers. I've gone to battle on behalf of cell phone and
broadcast tower clients, too, and you should see the opposition
that comes out of the woordwork on those cases.

Offer to have your structural engineer and contractor design and
build your ham tower to the same engineering standards and to
carry the same liability insurance as the cellphone tower and
you'll get your permit.

Well, I've been on 33 Field Days, and I can tell ya that OFTEN, when the
SSB stations are having a tough time of making any contacts at all due to
poor conditions the CW stations are cranking them out one after the other -
on the same band. And the CW stations are often doing it with inferior
antennas and less power than the 'phone stations.

And it's not just a signal-strength question. Sometimes the distortion on
HF is so bad that SSB is unintelligible but CW is copyable.

Just my experience on the ham bands.

I don't think so, Ed. What brought on that outburst? You ever see me call anyone "lazy"?

All I wanna do is sell the extra washer. Space is at a premium here, compared to the old place on RadioTelegraph Hill.

Around here, laundry on the line on a nice day is a common thing. But I'm not selling the dryer - it's a Maytag, too.

> use an antenna for any other purpose is not correct.

You may not like it, but it is the truth. Nobody can force you to agree
to sign an agreement which binds you to these things you know, Keith.

Do you even LIVE in an association? I'm guessing not. You don't seem
to know much about them.

Made over in Newton IA, the county seat of Jasper County. Of no giant significance except that Newton and Jasper have a way of being neighbors as in Missouri (Dick) or the seat of a county named the other in several states.

Who in hell was Jasper Q Newton or Newton Z Jasper???

I assume you're speaking for yourself, Jim. I certainly don't find rote memorization to be easier. That's what I had to do for my first code test. I sweated bullets for that one. By the way, did you study from question pools back when you took your exams, Jim? If not, I hope you won't mind my asking why I should consider you to be an authority on that subject.

> Well, I was 13 and had just entered the 7th grade. I knew tropospheric

That's about the extent of the coverage in the current question pool as
well.
You still have to know those things for the test, except for how it
sounds on the air. But I don't find that explained in my handbook.
Wonder if you did.

> > Could you have explained how two co-located

Now you're directly disputing what you said before. "Then any statement that omits boundaries is invalid." I simply applied your rule, Cecil. I hate to say it OM, but you sound a little like you don't know what you're talking about.

> "CW gets through" doesn't
> imply any other set of times - it implies the set of all times.

This is the statement you said was invalidated by omitting it's boundaries:
"set of times when CW gets through and SSB doesn't get through".

This is the statement you now say is not invalidated by omitting it's boundaries: "set of times when SSB gets through and CW gets through".

I'm going to go out on a limb here and claim that you appear to be applying your logical rules arbitrarily.

Maybe so. Makes me feel glad that I'm in a tract where the CC&R's are 50 years old. There was even an anti-"African-American" clause in it, which went poof in 1964 with a certain change in federal law (that has never been amended out).

This just goes to show you: One has to simply pick the correct tract!

Jim, a statement that includes "the set of" is supplying the boundaries.
Why is that so difficult to understand? "The set of" includes everything
within the boundary that defines the set.

>>"CW gets through" doesn't
>>imply any other set of times - it implies the set of all times.
>
> This is the statement you said was invalidated by omitting it's

Thanks a lot, Ed and Jim! I'm going to digest this a bit, and post
back. Sorry, I've been away from the computer for a couple days.

Seems that way, but that's how it works. I don't like it, but I
understand how it works.

What's really going on is that by buying a no-antennas-CC&R house, the
owner has agreed to have no outside antennas of any kind, for any purpose
whatsoever.

Then the FCC preempts (overrides) the no-antenna-CC&R for a single, very
specific type of antenna, to be used for a specific purpose: TV reception.
And for no other purpose. FCC only did it because The Congress told them to.

Here's an analogy: Suppose a ham helps other hams fix their rigs. Suppose
this ham lives in a "no businesses in the residence" CC&R house. (Very
common, btw). He/she can fix anything as long as it's for free, or the cost
of parts, but when he/she starts charging for the repair it becomes a
business. The tools and test gear can be used for ham radio but not for a
basement business. Because by buying the restricted house, the owner agreed
not to do so in a legal contract called a deed restriction or covenant.

> Surely somewhere there is a court

>are black, etc)
>
>Let's do some math
>
>If over 2 years.........
>
>That comes to 660,000 per year

Wrong.

History: US Army press release in 1956 had stated some facts
of Army communications which included 1.25 million messages
PER MONTH relayed by Washington Army Radio in 1955 and
included ADA in Tokyo in the listing as "third" in Army message
traffic at 220,000 per month. Either AGA in San Francisco or
AHA in Honolulu was second (irrelevant as to discussion, there
were no "DX Contests" in military message traffic related to
military traffic).

I was at ADA 1953 to 1956, first 25 months at transmitters with a
one month pause for a new microwave equipment course, the
remainder as microwave radio relay operations and maintenance
supervisor at both ADA transmitters and Control Center at Chuo
Kogyo (outside of Camp Drake, NW of Tokyo outskirts). Between
January 1953 and mid-1955, ADA had 36 transmitters on HF
ranging from 1 KW to 15 KW, FSK TTY (single or time-multiplexed
circuits), AFSK TTY on "commercial" SSB (12 KHz BW, four
voice channels, two voice channels with AFSK TTY via frequency-
multiplexed "carrier" for 6 to 12 circuits per SSB transmitter).
The Chuo Kogyo Control Center had approximately 220 TTY p-tape
transmitter-receiver machines in the manual p-tape message
relay section taking one whole floor of a converted warehouse.
ADA served the Far East Command Headquarters and Far East
Army Command Headquarters then located in and around Tokyo.

ADA message traffic was slowing down by the mid-1950s with
the Korean War entering a so-called Truce state in July 1953.
While I have no referencible documents for message traffic at
ADA prior to 1955, this was probably closer to 250,000 messages
per month evidenced by the temporary 12-hour work shifts in 1954
and the amount of finished p-tape in the two-story tall burn hopper
at Chuo Kogyo.

Figuring just 220 K messages per month over 24 months, that
would be 5280 K total. Discounting the temporary 12-hour shift
period and assuming the normal 8-hour shift (ADA was a 24-hour
operation), that would be 1760 K average message rate per
shift over the 2-year period. ADA transmitters had 4 operating
and maintenance teams on a 12-day cycle, three days per
shift (day, swing, midnight) with three days off. That comes
out to 75% of the per-shift for each team in that 2-year period or
1320 thousand messages.

The math is correct. The math is also extremely conservative
since it does not include the higher rate prior to 1955 nor the
temporary 12-hour shift period of 1954.

NONE OF THE ADA RADIO CIRCUITS USED OOK CW.

None of the US military fixed-point to fixed-point HF radio
circuits were planned to use OOK CW from 1948 onwards.
That was long before satellites, before troposcatter, before
the transistor and IC era. The communications modes on HF
were, in order of max-min use: TTY, Voice, Facsimile. TTY
carried the maximum message traffic in all branches. The
USAF was the largest user of Facsimile for weather imagery
at the time but even USAF (a new service branch then) relied
on TTY as the main message handling mode.

Washington Army Radio TTY relay center used semi-automatic
reader-router switching that was a precursor of AUTODIN, the
"hidden" (inaccessible) automatic digital-teleprinter data network
of the military. WAR carried more landline circuits than other
Army communications facilities so it becomes difficult to
separate radio from landline traffic directly in the general DC area.

EXACT determination of "message handling" is not readily
possible in terms that the average troll or average radio amateur
can understand. Military messages originate at some unit
command and are directed to another unit command but are
handled by signal personnel at signal centers (exact names of
these centers vary with service branches) which may be part
of radio communications centers or work in conjunction with
such radio units. Military communications methodology and
technology has evolved since the 1950s but DATA modes
(which include teleprinter) are still the mainstay of messaging
in the US military.

>Assuming that Col Len is a sleepless superman, that means that Len, was
>responsible for relaying 75 teletype messages every hour or 1 1/4 messages
>24/7 for 2 years.
>
>Or, if Len counters with, IT'S NOT 2 YEARS, IT WAS OVER 3 YEARS TIME...

The UFO imaginator runs off at the keyboard, not able to do simple
arithmetic.

I did not count the last year's duty which involved the 9 microwave
radio relay terminals which had 4 terminals carrying ALL
communications (telephone through SSB modulation) to the new
transmitters site at Kashiwa (two 24-voice-channel terminals plus
a duplicate set always on-line as backup), 3 terminals to FEC Hq
at Pershing Heights, 2 terminals to the receiver site NW of CK and
Camp Drake. The total number of radio circuits outgoing through
transmitters can only be approximated due to a variation of the
number of TTY circuits on the "SSB" links (those could be anywhere
from 6 to 16 depending on frequency diversity necessity or doubled
tone-pairing or not). USN-contract equipment could time-multiplex
four TTY circuits on a single wire or voice-grade pair at the then-
standard rate of 60 WPM and required "electronic" FS keying (a
single tube replacing the normal pre-war polar relay in a transmitter
exciter). "SSB" in the military sense referred to four voice-grade
channels, one voice orderwire, one "overseas radiotelephone" circuit
with the two remaining channels carrying AFSK TTY.

From memory, the ADA trans-Pacific HF transmissions went to
San Francisco (1 SSB, 1 4-TTY MUX), Honolulu (1 SSB, 1 single-
channel TTY), Seattle (1 4-TTY MUX), Anchorage (1 single-channel
TTY), Manila (1 single-channel TTY), Pusan and Seoul, Korea
(variable from 1 single-channel TTY to 4-TTY MUX each, an adjunct
to wireline and VHF radio relay circuits across the Sea of Japan),
Okinawa (1 SSB), Saigon (increasing from 1 single-channel TTY to
4-TTY MUX to MAG there after the French defeat). All of those
were 24/7, doesn't count the FEC staff transmitter (voice and AFSK
TTY) for their airborne mobile needs, another transmitter, doesn't
count a "rover" which could be brought up as single-channel TTY
to handle peak loading on at least four circuits mentioned. Lose one
microwave radio relay terminal and HALF of the transmitters were
inoperative. That happened only twice and resulted in a terrible
two-minute outage while 24 channels were manually patched over,
checked and verified. Two minutes times a hundred-plus radio
circuits is a LOT of outage. Each circuit cut-out meant bringing up
a spare on the proper frequency or QSY (due to propagation effects),
tune-align (except for the one WE SSBs and lone Collins Autotune
rover), check the Fox-test keying, receiver site's "frequency" sub-
section getting the exact Mark and Space frequency (orderwire on-
line between Control, Transmitters, Receivers 24/7). Average QSY
time was also two minutes, no benefit from PLL or DDS synthesizers
and TCXOs, no "split" with memory, none of which existed prior to
1957 for military HF communications...or anyone else.

NONE of that is a "military secret" or "classified to prevent damage to national defense." It is simply unknown by all those who think that "radio" for everyone else works on 1930s standards and practices.

Those who don't want to learn about the rest of the world can remain in their closed-cycle never-never land. I can explain much more, more contemporary radio in the REST of the world...but why bother? Closed minds don't want new input, want to remain static and locked into "amateur-only" knowledge, and sneer at anyone who has done something else in radio. You, UFO, want to bring down everyone to your level, but not all wish to drop down to your sociopathic level.

He doesn't have a handle on Cecil's five decades of amateur radio
experience, either. In fact, he doesn't seem to have a handle.

>This will provide yet another opportunity for you to blow the dust
>off your resume and to outline your amazing exploits.

I have no "amazing exploits." I don't portray myself as Heil does,
giving everyone a snow-job on his "wonderful idea" of using CW
as an order-wire on an RTTY circuit for State Department from
an Embassy (!!!) in Guinea-Bissau. Rather NON-amateur,
wasn't that? Of course it was. Of course it was also a snow-job.

Way, way back in newsgroup prehistory somebody named Heil
tried to pull off a fast one by parading his fantastic exploits in
State Department radio by an "example," that of using CW as
an "order-wire" on an RTTY circuit. What he was banking on
was no one knowing anything about HF comm anywhere else
but in amateur radio practice. The term "order-wire" is not in the

jargon of amateurs. Open opportunity for snow-jobbery, chest-thumping and self-praise. Problem was that someone DID know about order-wires, RTTY, and had actually DONE that a quarter century before. Tsk, tsk, snow got melted, BS revealed for the stinky stuff it was. Poor baby got all hurt and upset. Awww...

Yeah, it was rated right up there along with the yo-yo who claimed His Son operated CW "behind enemy lines in Iraq" sending "intel" back to the coalition. Jay-suss, another SNOW JOB in the desert. Dumbass didn't know that the equipment for "intel reporting" by UHF with data and COMMSEC was already publicly-available, even to hams (link to ATDLS and TM 11-24 on at least two ham-oriented sites). That man-pack AN/PSC-2 has been augmented by manpacks going up to AN/PSC-5, but I digress.

>We mere radio amateurs are sure to be spellbound by your tales.

Poor baby, feeling poorly that no one is spellbound by Heil's Mighty Radio Accomplishments?

>In case Joshua hasn't been clued in, you are not yet a newcomer to
>amateur radio though you hope to be one day.

Wrong on both statements, clueless. I am a "newcomer" in sort of the same sense that Dale Earnhardt, Jr., is a "newcomer" to vehicles. Do you think the Zamboni is an ultimate vehicle?!?

Hint: Ice is a near relative of snow. There's a job for you there someplace but you retired.

>You may become more
>motivated as you compile one of your frequent restatements of the
>obvious while wearing your spiffy new ARRL tee shirt.

Awww...poor baby is all upset and snarly again.

Heil has made all kinds of statements of the OBLIVIOUS with that tired old CW-uber-alles speechmaking. Jay-suss, big Dave, did they toss you out of the Bund meeting again? Poor guy.

>Let me know if Ed
>doesn't come through for you and I'll be happy to buy you one myself.

No problem, happy Dave, you just keep on making all the snow and I might even buy you a shovel. [shovels are also good for removing your BS on CW and ham radio as you and only you judge it]

No, make that a mirror where happy Dave can preen and posture repeating the noble mantra "ham radio is ALL working DX on HF, there is no other, and the expert grades all do 20 WPM morse to the max." You are superior. All must meet your criteria or be judged inferior. The inferior may be treated with all the sociopathy you think they should. Understood.

I live in an urban area of about 10 million in what was the heart of
the aerospace industry. The local FCC office has been in Long

Beach since 1956 (35 minute drive on clear freeways). I can count
at least five VE ham test locations within that distance today.

> I've said before that studying for a ham radio license then sure didn't

>had his First Phone, and another who had 2 1/2 years
>of EE college program behind him.

Very impressive, Dickie, but STUDIO BROADCASTING EQUIPMENT
classes aren't "real" communications, are they? Doesn't go into
HF radio at all, nor troposcatter or comm satellites, does it?

>The three of us finished the top
>three, all within less than a single point separating us.

Oh my, must have been much later than my 9 months at the
Signal School in Fort Monmouth in 1952. We didn't get "points"
except Pass or Fail. The Fails got reassigned. The Pass
group got a nice group picture and a notation on orders.
Color TV hadn't been standardized yet in the USA so it must
have been much, much later than my time learning microwave
radio relay operation-maintenance. How much microwave
radio had been installed anywhere in the rest of the radio world
in your time?

Oh, and my time at Monmouth did not include "the FCC coming
to the Signal School to give tests" as you claimed earlier. Four
years later I had to travel 90 miles to Chicago without any subsidy
to pass all four parts of the Commercial 'Phone to get a First.
But you said earlier you only got a Second commercial phone.
The fourth part needed at most 45 minutes to complete after
passing the first three parts (examiners would check each part,
fail at any stage and bye-bye). I passed all of them (they didn't
"grade" anything other than pass or fail, no CSCEs or anything).
No, none, nada experience in broadcasting prior to test...needed
the First to GET a job in broadcasting or most civil radio then.
I didn't have all those advantages of vast ham experience, all
that schooling on TV studio equipment at Monmouth, and the
FCC coming to you for testing...and I passed the First at one
sitting. You only got to a Second.

> So I learned
>that my ham radio technical training, while quite incomplete, was
>indeed a very good beginning, and I *did* know a bit of radio theory.
>Not on an design engineering level, but certainly on a technical level.
>Some of it was gained in the few years following licensing, but by
>no means all of it. No one ever said study for a ham license affords

>a high degree of skill.

YES you have. Indeed you have!

>Perhaps that's a big part of the reason it concerns
>some of us to see evidence that it has slipped further.

The grant of a radio operator license is NOT, nor has it EVER been
any sort of academic skill test. It is simply an AUTHORIZATION
by the federal government for the licensee to operate on a certain
part of the EM spectrum

> Either the tests are easy to
>pass and applicants easily learn the material, regardless of their
>lack of technical background, or the tests are easily compromised.
>An area where lots of highly trained persons live should have a
>higher pass-fail ratio. It doesn't seem to be working out
>that way. So one can deduce that evidently the tests don't test for
>knowledge, rather mastering testing technique. Or else they're dead-
>easy, and that's perhaps just as bad.

...or some have inflated their own IDEAS of What Should Be...

Since the start of privatized testing for ALL radio operator licenses,
there has been ample opportunity for ALL "concerned amateurs" to
communicate with the Question Pool Committee. Has Carroll ever
done that?

That's what I did in 1963. I met the requirements. Hams today meet the requirements. And the easiest way to to do that is to learn the underlying material. Why do you keep trying to convince new hams not to do that?

Hello,

I am located in the central california area and am thinking about taking the exam to acquire my ham radio license. I would like to know if it would be possible to take my tech & general exams at the same test session, or would I have to pass my morse code exam first before taking my general test? I realize that even if I was able to take the general test after the tech exam, and I passed it, that I would only have tech privileges until I passed the morse code exam.

Also, as I understand it, the fee per exam is $7. Is this fee amount still accurate? Are there any other costs that I would need to pay to go into a test session and take the exams? Sorry for all the questions, but I need the information. Thank you.

I sir am no Phil Kane, ;-) but in my experience with CC&R's and large
home owners associations, one would typically have to cite other
examples of the lack of antenna enforcement over a period of years in
order to be successful with that tact. Saying "I've been in violation
for years" won't quite cut it.

I think that cell phone towers are what many neighbors of hams envision when a ham wants to put up a tower. Some 'o them suckers are BIG!

I know of one ham who won over some of his neighbors by showing them what a 10-foot section of tower is all about.

It's not hard to see, Jim. Both our statements are valid. I have never
said that they were invalid. What is it about that that is so hard for
you to understand? The invalid statement is:
"CW gets through when SSB doesn't." It contains no boundary conditions.

> Check the quotes, the attributions, and back up in the thread if you
> need to. Evidently you need to. You're incorrect, sir.

If I am, it is a ****MISTAKE****!!!!!!! You clearly didn't understand
what I said. If you can produce the posting where I said a bounded statement
is invalid, I will apologize.

You sure need a lesson in logic, Jim, more than can be done in a newsgroup. If "CW gets through when SSB doesn't" can be false, it implies absolutely nothing additional. May I recommend a logic textbook for you: "Logic, an Introduction", by Ruby. I'm surprised you can lead a successful life believing what you believe. There are at least four conditions possible regarding CW and SSB, 00, 01, 10, 11. Even Ed knew that. :-)

Maybe the applicants in the tech regions are younger on average?
Maybe that 66% success rate indicates when applicants feel
confident enough to go to a VE session and take the tests. Also,
how does that statistic handle an applicant that passed say the
general but failed the extra?

I took my advanced and old extra in Jan 2000, got the CSCEs and
cashed them in Apr 15th, 2000. The VE said I missed one
question on the advanced, and two on the extra. Though I'm
a double E, I still looked at the question pools to prepare, like
any good student would.

Back in the old days, I took my tech in July 76 at the NYC field
office located near Greenwich Village part of Manhattan. I aced
the code and nearly failed the written, backwards to my expectations.
I remember one question asking something like: "Your CW transmitter
has a power supply of 800V DC. Up to how much current
can you draw from the supply and still be legal?" At the time 1KW "plate
power"was the
legal limit, so 1.24 amps would be the answer. That question was
a two pronged attack at your knowledge, as you needed to know
how power was calculated, and what the legal limit of the amount of
power in the ham radio service. At the time, power was defined in
the rules as the voltage on the output tube(s) times the DC current drawn.
If it were a SSB transmitter, there was this "Peak envelope power"
which IIRC would allow you to peak at 2KW but average 1KW
while you were talking. But don't forget that your analog amp meter

has lag, which doesn't let you see the max peak. I forgot if the
meter reading would give a close approximation of PEP power,
i.e., that if it says 1.25 amp on 800VDC supply, that if that would
give the reading to tell you that you're at the legal limit.

>
>Tell us about yours, Len (he said reluctantly).

Why? My only ham experience is contributing to a ham
experiment on a microwave band. It doesn't involve CW or
SSB.

Kelley failed to note the ever-popular phrase "ham bands."

To the code-loving beeper on HF the ONLY bands for hams
are those below 30 MHz. There's a fair chunk of the spectrum
above 30 MHz allocated for ham use, ainit? Do you want to
sneer at microwave-band experimenters like this one did? -

"Gigahertz for gigasquirts" - big badass KH2D

I've "worked" microwave DX two-way on a 240,000 mile path,
but not in the "ham bands." I don't consider that any big thing
but there is NO terrestrial DX that can come close to that range.

Didn't need a single morse skill to do that. Why not?

>that subject.

I don't claim to be an authority or an expert on anything. Just a voice of
reason with some knowledge and experience. I know some of the things
I write are electropolitically incorrect, but that doesn't make them untrue.

Over the years I have always kept my knowledge up to at least the level needed
to pass the current exams. Every few months I take a simulated online test just
to keep my hand in. I purposely do all the math in my head to make it more of
a sporting course. Never a problem.

>> point of view, though.
>
>Define the practical purpose of suppressor and screen grids from a
>non-electron optics point of view - from your perspective when you were
>first licensed.

Sure. Remember, this is what I knew back then.

One problem with triode tubes is that the capacitance from control grid to
plate
can be high enough to cause oscillation in some applications. One cure for this
problem is to insert another grid between the control grid and plate, to act as
a
shield. It is called a screen because it screens the grid from the plate, in a
way.
The screen is usually bypassed to ground at the signal frequencies but operated
at a DC potential so that it does not reduce electron flow to the plate much.
Some
current flows in the screen circuit, but not as much as in the plate circuit.
Tubes
with screens are called tetrodes because they have 4 elements.

But adding the screen causes other problems. Under some conditions, electrons
hitting the
plate cause other electrons to be knocked loose. This effect is called
secondary emission.
It can cause problems if the electrons are attracted to the screen. So a third
grid, called a
suppressor, is inserted between screen and plate. It usually has only a few
widely-spaced
turns of fine wire, and is operated near ground potential. Electrons knocked
off the plate are
repelled by the screen and usually wind up back at the plate. Tubes with
screens and suppressors
are called pentodes because they have five elements.

How's that?

>> > Could you draw a
>> > picture of a PN junction and explain about majority and minority
>> > carriers?
>
>> Yup.
>
>And you learned that from the ARRL handbook?

Dig out a 1967 Handbook. Transistors are in there.

I had other books, too. For example, I had an old RCA receiving tube handbook. Learned
a lot from that.

>When were you licensed again?

Novice, 1967. Tech and Advanced, 1968. Extra, 1970. Would have had the Extra at least
a year earlier but for the mandatory two-year wait.
>
>> > Did you know how to design and implement a plate loading

>
>Would you mind explaining the difference to me?

I've never heard of a "plate loading network". Not in any of my radio books, and they didn't
use the term in EE school either. So I guessed you meant "pi-network" or some such.

I had to make one for my first transmitter. I used link coupling, though, but I understood how to
do it.
>
>> > Could you calculate (or even describe) the exact effects of end

If it was common knowledge back then I woulda known it. But subtones and CTCSS
and such were not common ham practice then. How many hams today would
understand
things like "gotta redip the plate" or "you're closing the eye here, OM" or
what a "halo" is?

Just to satisfy your obvious curiosity ;-)

The point I'm making with the Extra is that while you are focusing on what
beginners know, it's
also important to look at what those with the other classes of license know.

For what it is worth, my wallet is a heck of a lot smaller than any association's or the government's. We live by the golden rule; he who has the gold, rules. Such fighting is probably best left to the political process. The ARRL is likely to do a lot more for us than any of us can do for ourselves.

If you go to an ARRL sponsored test, the fee is $10, and as long as you keep passing elements, that single fee covers everything (i.e. fail and retake something and that will be another $10). GLAARG charges less. You might be up where the Sunnyvale VEC has coverage; I don't know what they charge.

The written elements pretty much must be passed in order (as enforced by the VEC group you test with). The code element is a "separate track" and can be taken at any time.

You can take the written exams in sequence - I do not think you would be allowed to take Element 4 having failed Element 3 - without taking the code test at all or even having failed it. Shop til you drop.

When you go to test, bring:
1) a picture ID. You will be asked to prove that you are who you say you are.

2) Ten bucks

3) Original and photocopy for the examiners of any previous or current licenses. Originals only of previous testing certificates.

If you succeed in what you are asking you will be issued the Tech license and a cert for Element 3 which you have to redeem within 365 days by passing the code test; they do not last forever.

Suggest that three websites should be bookmarked:

http://www.arrl.org for all kinds of good poop
http://www.qrz.com for some good sample exams
http://ah0a.org for Morse Academy which comes out of the box at test speeds. Follow directions and use your compooter. Stop off at Walmart for an el cheapo set of headphones or your family will berate you strongly about the head and shoulders to stop the infernal beeping.

And finally, Good Luck.

Dick N&#65533;BK

The Amateur's Code
The Radio Amateur is

CONSIDERATE...never knowingly operates in such a way as to lessen the
pleasure of others.

LOYAL...offers loyalty, encouragement and support to other amateurs, local
clubs, and the American Radio Relay League, through which Amateur Radio in
the United States is represented nationally and internationally.

PROGRESSIVE...with knowledge abreast of science, a well-built and efficient
station and operation above reproach.

FRIENDLY...slow and patient operating when requested; friendly advice and
counsel to the beginner; kindly assistance, cooperation and consideration
for the interests of others. These are the hallmarks of the amateur spirit.

BALANCED...radio is an avocation, never interfering with duties owed to
family, job, school or community.

PATRIOTIC...station and skill always ready for service to country and
community.

--The original Amateur's Code was written by Paul M. Segal, W9EEA, in 1928.

Thanks Dave - I'd missed this since it found it generally pointless to open any of Len's posts.

Len, seeing how fastidious a reader you are of r.r.a.p. (for god knows what reason - but in the event that you actually *are* interested in amateur radio, come on in, the water's fine), I'm a bit surprised that you missed Cecil's post where he berated Dick for turning him of amateur radio, since he was a newcomer and therefore impressionable.

Am I a newcomer to radio? I don't understand why that would be a bad thing (we amateurs tend to help each other out, y'know), but to sate your appetite, no.

Isn't CW pretty much obligatory ('cept for the odd masochist) at the
10GHz+ level? Above that - and yes, it's the largest bandwidth in the
amateur bands - CW is the predominant mode.

And I think he's having more fun with the discussion than really considering what things are being expressed. Bottom line: CW may be a very reliable mode, maybe even the *most* reliable mode. But, if there are few who use it and few who understand it, then its reliability is pretty much a moot point. The reliability of CW is definitely a moot point for me...

Thanks, Ron...! I love seeing Lennie the Liar Anderson getting his balls busted!

I rolled even harder watching him try to spin his way out of this in the post that followed!

Part of Lennie's arrogance, Ron, is that he refuses to accept that we KNOW what an arrogant putz he is, and he continues to post so-easily unravelled stories.

Stay tuned...His attempts to un-spin this faux pas will be "Classic Lennie".

Ed:

Axeually, I have a lot of sympathy for lazy knuckle-draggers. From a strictly ham radio perspective, I used to be one myself. However, I was able to overcome those tendencies, and attain 20 WPM and Extra class with relative ease, once I got started. At that time, the only thing keeping me out of ham radio was my own lack of willingness to learn a useful communications skill. It "filtered" me out. Had I not had to earn my privileges under the set of testing requirements in place at the time, it is not very likely that I would have done a fraction as much on-the-air as I have, nor would I have had a fraction as much fun. I really feel sorry for future hams who will never know the satisfaction of being "Real Hams" because they simply won't learn Morse code in the absence of a meaningful license testing requirement to do so.

Has N2EY ever relayed-transmitted a teleprinter message
over radio, any radio? I've relayed-transmitted about 1.32
million of them on HF between 1953-1955..

UNQUOTE

Thanks again, Lennie. I needed the laugh!

> skills to use them.

>

I agree with that only to a point. I believe your inference there is that if someone is all that serious about being prepared, they will have CW skill in their repertoire. However, there is a training effort there that some--me included--are not willing to spend time on. There are some people who, for whatever reason, don't know CW well enough to use it at all, let alone in an emergency. I certainly don't have the desire to learn better skills with CW so that I can stay in practice with it and have the ability just in case. I don't enjoy it enough for that kind of effort.

> I think one of the things that bothers some people about CW/Morse is that

If there are people with that kind of issue, they have way too much time on their hands.

> >Do
> >I become a doctor so that I may be fully prepared for an emergency?

>

I would hope that any radio amateur who is has the dedication and perserverence to put into emergency communication would certainly go to the extreme of being a doctor, *IF* that is what they desired to do. Emergency Communication services in amateur radio are beginning, just barely beginning, to take on some new challenges in defining the limitations of their services.

Because I am of the opinion they are pretty dumb #$%@s if they race in this heat. I also think jumping off a high place with a huge rubber band is pretty stupid. However, that is my opinion of people who live like that and, as long as they don't involve me--who'm I to care?

>

It may strike you however you'd like. I didn't like the entire learning
process of CW, hated sitting down and studying it, can't stand the
monotonous tone, and far better enjoy hearing someone's voice. I rather
think that listening to a person beep is about as cold a method of
communication one could possibly experience. You may like it, I do not.

Well, that's my point about all "those other modes." While some may be darned dandy applications for emergency communication, they just aren't picked up. The reliability becomes moot when there's no one there...

See, that's the problem Len. It's so much self congradulatory back patting
by the US Military. If I remember correctly,
someone here keeps stating that puff pieces that are outside the mainstream
press are not considered reliable. Now who said that?? hmmmmmmm

Did the LA Times, or the NY Times or the Washington Times carry this
information for the average Joe to read? I didn't think so. Guess it's
from a unreliable source there Len. Always cite references. 1st rule of Jr
High debate class ya know

Guess we'll just have to have ANOTHER HISTerical lesson about that splendid
military career just to justofy the claim

OH MY GOD I WAS ONLY KIDDING!!!! DAMN..too late here it comes.

>
> I was at ADA 1953 to 1956, first 25 months at transmitters with a

I know this one I know this one. ADA = militaryspeak for A Dumb Ass. Hey guys and gals..I was right. Ol Len here was a clerk. Can I call them or what?

The rest of history is snipped cause it's just boring as shit to actually read.....

> The math is correct. The math is also extremely conservative
> since it does not include the higher rate prior to 1955 nor the

Really? I alwasy thought that the rules governing radio were finite since they were firts discovered. Are you suggesting that your radio goes beyond the law of physics and in your case, I am not referring to an enema, although it seems your life is a tad constipated :-) (note smiley)

>

EXCEPT SIR STUP_A_LOT, this is an amateur related newgroup, a concept you still have difficulty in understanding. Your experienec in our radio does not mean squat here to anyone but yourself. Get it Len. AMATEUR RADIO..AMATEUR RADIO, not AM Rush Limbaugh type Imus in the Morning type radio. Get with the program man. You can't beleiev just how pathetic you look when you make there statements.

If you're so keen on showing off your radio expertice, find a newsgroup that would best serve that inflated ego oif your, like rec.radio.experiemtning.

You, UFO, want to bring
> down everyone to your level, but not all wish to drop down to
> your sociopathic level.

WOW BIG WORDS FROM A BIG MAN... oh my didums feewings get hurt. Did the big bad mans scare the whittle Whennie Anderson?? Oh my.

Geez Len, You make a statement that trivialized the death of over 3000 innocent people and then rant about some earthquake 10 years ago. You seem to think your military experience is something that everyone needs to know and know and know and know and yet you offer nothing. I am willing to gamble that 1/3 of the people here are ex-military and yet you are the only one that seems to rate. Wow, you sat at a desk and relayed teletype messages...SILVER STARS all around Yep, that certainly ranks right up there. I, personally was responsible for hurling Volkswagen Beetles over the horizon at unseen targets in support of ground troops....big whoop. I had a job and I did it. And guess what..the gun ready enunciators had a light that showed green and, although not OOK CW MORSE, did sound the letter "R", to show that the gun(s) were ready for firing. My two index fingers were all that was needed on the triggers to send those VW size projectiles skyward. Big deal. At the recent dedication of the ship, I was able to explain the procedure for firing the guns. Ya know what...the people were

more impressed with the loading and handling of the shells in the turrets. OH well, that's life.

You, on the other hand are so god damn insecure you have to beat everyone continually with your "war" stories. NO YOU CARES LEN.

You rant about how hams are stuck in the past, yet your entire existence revolves around 1953-1956. If math stands...THAT IS THE PAST you FOOL.

You refuse to accept the position that in many MANY instances hams volunteer their time to emergencies with no thought of credit and glory AND THAT GALLS YOU TO DEATH doesn't it Len? You refuse to accept the fact that these are ordinary people helping out in extraordinary circumstances and that eats you up like a cancer WELL TOUGH SHIT. In fact, take your little Lonnie TS card, place it over your Ken doll type groin and I'll be happy to stamp it with my TS stamp.

So regal us again with your increasing dull and boring military career. Tell us how amateurs don't contribute because YOU never see it in the paper. Funny, that's what I thought volunteerism is..doing something for others without having to bring attention to ones self. You aren't that definition..and you have the gall to call me a psycho.....wow you da man. you da bomb.

The others were right when they suggested to come here and see for myself that morons like you actually exist and prove on a daily basis that they can embarrass themselves with ever increasing frequency.

Keep on keeping on Len, but remember, just because you say it certainly means it ain't so.

Cecil logic test ADA Leonard H Anderson is a human being

BTW, you made 7 spelling mistakes, but who's counting right??? ;-)

You may see it that way. *I* like the way it looks. (Also really enjoy the way it sounds inside, and feels inside. Not a top-notch sound system, but a lot better than I've ever had!) I don't care what someone else thinks of the way it looks. Would you also say that I might own a dog because of how other people see the dog? I am sorry, but I am not into projecting anything to anyone, Jim.

I think the point you missed because it wasn't relayed well is that the MODE
CW may be reliable...but it's moot if there's few people around to use it,
hear it and understand it.

Those types of restrictions were thrown out by the _Shelley v
Ktaemer_ decision by the SCOTUS in 1948, Fred Vinson, C.J.

>This just goes to show you: One has to simply pick the correct tract!

It's become harder and harder. My 1965-era tract house CC&Rs don't
talk about antennas but do talk about maximum height limits of
structures and appurtinances. Fortunately I can get a 50-foot tower
under that radar and get into a wresting match with the city over
engineering standards.

My former 1988-vintage condo CC&Rs did, but had a provision for the
Association board to permit the installation. No sweat - I was on
the board. One of my neighbors wanted an amplified SWL antenna
(small box and 3 foot whip). No problem. Another neighbor wanted a
DSS dish pre-OTARD. No problem.

Just gotta pick the right association, especially one that has a
pro-antenna ham attorney on the board.

Pac Bell put up one along side our congregation's parking lot (guess
who the latter's negotiator was). They put up a 50-foot monopole
between two existing 40-foot pine trees, and enclosed the equipment
housing in a side-and-top fence enclosure that looks like a redwood
packing crate. After a month we didn't even notice that it was
there. The payment rolls in month after month.

Too late, he's already gone off and shot his load of blanks AGAIN!!. I can't understand how a man (loosely affiliated with the definition he is) can repeatedly berate a group that he is no part of, wants no part of and will never be a part of, for supposedly living in the past, yet continually posts his 1953-1956 military career as if that's some sort of modern day bible for all to read.

Right now, he's the laughing to of the North Shore of Long Island. We have club members who are real life electrical engineers working for Grumman, or what's left of it, and read this stuff and just about have strokes laughing so hard. I am sure there are several here on rrap lurking to see what other 1950's revelations ADA (A Dumb Ass) Anderson. I've heard some praise for

Carl as they seem to be on similar wavelengths but when it comes to Len, they compare him to Fred Flintstone. It's priceless

I noticed that Len failed to acknowledge the fact that Pres. Bush praised amateur radio operators in Florida or them Mayor Giuliani for their tireless work in the 1st 5 days of 911 when phone service was so dramatically disrupted. I see Len grinding his teeth when things like that are posted, because it proves him so wrong as to look even more foolish that normal.

Oh BTW, as with Kim, 28.525 is a tad too high. I've been a tech+ for years..see no real reason to upgrade, still have my original WB call as well. I'd give the rest but with nut cases like Len, you can't been too careful.

Have a good weekend. I see some decent DX is on, maybe I'll fire up the Kenwood 440 and see if I can break a pile-up or 2 with 100 watts and a G5RV

Later, and keep fighting the good fight. Len makes it way too easy.

73, Ronnie

Of course that's correct. No one is keeping a CCR'ed homeowner
from using his property any way he wants except the people who are
intent on enforcing the contract he signed. Entirely different function from governmental
law
enforcement.

The reason for that is an inability to reply (so far) on anything technical in regards to radio or electronics. There is no evidence to support it.

>Len, seeing how fastidious a reader you are of r.r.a.p. (for god knows

Good humor has to be written so that it will be written as humor. Attempting to disguise sarcasm as "humor" will leave it looking as sarcasm to readers.

>Am I a newcomer to radio? I don't understand why that would be a bad
>thing (we amateurs tend to help each other out, y'know), but to sate your
>appetite, no.

A newcomer to the world is recognized by their expressions on matters to others. The recognition in a newsgroup is limited to the written word, no other clues possible. The recognition from Joshua Hook is that of a PCTA who is a "new gun" in the newsgroup looking for a "reputation." Joshua Hook has earned one. It isn't a high one, it isn't a good one.

Joshua Hook seems to have NO knowledge of any other communications but amateur radio. Upon seeing that other world he would realize that amateur radio is really only a minority group in all the radio world. Such a realization does not bode well for those who seek self-proclamation of greatness in a technical pursuit solely by means of credentialism, articles of status, rank, and, especially, putting down those who are

not devoted to the promotion of more of the same of an amateur
radio hobby..

>amateur bands - CW is the predominant mode.

The "obligatory" modes at frequencies above 30 MHz (as well as those below) are given in Part 97, Title 47 CFR. Those who wish to operate legally as radio amateurs in allocated bands are obligated to obey FCC regulations. NOTHING else is "obligatory" except to those who have done nothing but read about the subject, developing attitudes fostered by elder hams who are rather highly biased to their own particular "standards."

Any communications link can use any mode which is agreeable to those operating the link and within regulations. Hook may find, on journeying outside the cloisters of amateur regimentation maintained by the PCTAs, that CW is neither "obligatory," useful, nor of any real value (except to QST editors who are obliged to add that "CW was used for initial contact" on some described earth-shaking event by hams in the microwave region) above UHF.

>> I've "worked" microwave DX two-way on a 240,000 mile path,
>> but not in the "ham bands." I don't consider that any big thing
>> but there is NO terrestrial DX that can come close to that range.
>>
>> Didn't need a single morse skill to do that. Why not?
>
>See above comment on masochism.

Irrelevant. The above is another posting of sarcasm that will be rationalized as "humor" in a later reply...and not accepted as anything but rationalization. By sane individuals.

The rest of the radio world uses a great many modes above UHF, many many more than are allocated to amateurs. MOST of the rest of the radio world does not require the masochism of trying to

use 1930s standards and practices in an advanced technology by a rigid adherence to old mindsets and an almost prussian discipline of "precise" methods, jargon, and tradition. MOST of the rest of the radio world does not require the operators of non-amateur radio to be licensed; stations are licensed for regulatory purposes and the station owners see that operation is kept legal by overseeing the operators.

Nearly all of the rest of the radio world has migrated up above 30 MHz and there is where the future of radio communications is located. To all except for the minority who are still rooted in old standards and practices, trying to force everyone to conform to their personal desires because they like to see others "enjoying" masochism.

As to being a "newcomer," Hook may be able to pull off a good snow job with words (the future will tell) on his abilities, knowledge, age, everything, but so far he has done little but try to play "the new gun in town."

>
> And still does not support ANY claim by you, Leonard HaHa Anderson, that
>YOU transmitted or relayed 1.25 million messages.

I did not claim "1.25 million messages." I claimed an approximation of 1.32 million based on known statistics of 1955 and clarified in sufficient detail.

>>None of the US military fixed-point to fixed-point HF radio
>>circuits were planned to use OOK CW from 1948 onwards.
>
> Which does not have anything to do with YOUR claim of passing 1+ million
>messages. What do you call it..."misdirected"...?!?!

No misdirection, just IGNORANCE of a claimed military veteran based on his never being part of any branch's signal operations and not demonstrating knowledge or familiarity with any military radio operations or equipment other than some avionics black boxes.

To repeat, military message transmission in a signals unit is NOT done by some solo operator in front of a single radio. It is the cooperative, coordinated effort and skills of ALL in the unit.

> For once you are right...since you are not an "average" troll,
>Lennie...And it's obvious that you tripped yourself with your own lies....

No lies. It is not surprising that a great deal of ignorance of the rest of the world of radio exists among radio amateurs...the publications seldom carry such information and too many amateurs are loathe to attempt understanding the radio professionals.

> You are the mathematically deficient one, Your Lyingness.

No. The calculations were described.

>>From memory, the ADA trans-Pacific HF transmissions went to
>>San Francisco....(SNIP)
>
> Mythological historical events snipped. Yor wifey has her leather's on,
>Lennie...run along.

Military signals operations are not "mythology." They are not recorded in any near-past history in amateur radio publications...except as very brief, very minor mentions on conversion of military surplus equipment if at all. The bigbadass ex-marine has demonstrated NO knowledge whatsoever of military radio skills, knowledge, or familiarity and has attempted to bluff his way in knowledge several times. Those of us who have actually worked in communications know and recognize him for the bluffing fake he is.

A gratuitous insult of my wife is way out of place. This is about the fourth such remark, equally uncalled-for, equally out of place.

Does such an insulting attitude portray amateur radio "leadership" in a good light? None. No light at all.

>Steve and the Boys

"Steve and the Boys" ought to relax, go out in the streets, look for old people to beat up and laugh at their agony. So far the "boys" haven't done so with me. Mosquito bites are not agony but are rather irritating. "The Boys" are mosquitoes.

>foot the fee, Lennie.

I have no keen interest on joining an activity which has such a high percentage of sociopathic technical morons as demonstrated by "Steve and the Boys."

"Incompetence in radio?!?" After a career in it that covered a wider span of the EM spectrum than ever allocated amateurs, using more modes and modulations than ever allocated amateurs, and getting paid for it IN engineering? Not hardly.

What can Steve of "Steve and the Boys" claim? Changing black boxes in aircraft? Being a purchasing agent? [good luck on your new job] Or sitting around waiting for some elderly people to show up so you can show off your manly skills at beating up old folks?

Knowledge gained and applied is not signified by "credentials" of this or that, nor of generalized claims of greatness in a newsgroup. It is signified by direct evidence. See the CD-ROM of the contents of 22 years of articles in Ham Radio magazine, 3-disk set resold by the ARRL. See some more publications...unfortunately for "the Boys" not concerning amateur radio.

> Matters not, Oh Creepy one...He STILL has a license to emit RF WITHOUT
>needing somone else's station license and authorization to do it.
>
> You don't.

Actually, most other radio services in the big radio world in the USA do NOT need an operator license to legally emit. Several radio services do NOT even need station licenses.

>>The grant of a radio operator license is NOT, nor has it EVER been
>>any sort of academic skill test. It is simply an AUTHORIZATION
>>by the federal government for the licensee to operate on a certain
>>part of the EM spectrum.
>
> Not on "a certain part", Oh Flailing One, on MANY certain parts. And in

So maybe the requirements are inadequate.

> And the easiest way to to do that is to learn the underlying
> material.

That's your opinion, one not shared by a large percentage of
applicants who have no technical background and find it more
of a problem to acquire one than to just study the question and
answer pools.

> Why do you keep trying to convince new hams not to do that?

Why do you keep wrongfully accusing me of that while ignoring
all the Kim's who plainly state that they did it that way?
All your braying about "1,000 questions and answers" and your
"Russian words" or whatever is pure deviant distraction.
People with a technical background will find it easier to learn
the material while those with no technical background for the most
part will not. For the most part they find it much quicker and easier
to just memorize.

I didn't see that at all, in fact we had a high percentage of persons
ujnder 40. I think that would be considered as young for the average
new ham today.

>
> Maybe that 66% success rate indicates when applicants feel
> confident enough to go to a VE session and take the tests.

I've seen people set down, go down the sheet checking one after the next and
turn it in within 15 minutes, with not a mark on the scratch
sheet. Not problem worked, not a formula written down and make a good passing
score. I can only conclude they had done the memory
thing till they could instantly
pick out the matching answer to any question on whatever exam they prepared
for.

> Also,
> how does that statistic handle an applicant that passed say the
> general but failed the extra?

Sure I do Len. Have had it for years. You're a clever lad, look it up in the callbook. Give you a hint, I've had my license for quite some time, try some time in the 80's perhaps. I've had problem with mental defectives like you suddenly have this desire to be my friend. Phone calls in the middle of the night...100's of e-mails sent, 100's of mailing lists subscribed to. You fit the profile perfectly. What next? You'll want to come to NY to visit me and the family. Maybe to pay a visit to Ground Zero and spit on the site. Explain to the crowds how trivial it all must seem because you lived through an earthquake. Nah Len..stay home. LA needs nuts like you. You're the local color. Without you, LA would be just another city

As to my callsign, you show me yours and I'll show you mine. ;-o

Wow, some word warrior. I've seen better fights from school children. BTW, are you related to Burt Fisher, K1OIK. He's another mental defective with a chip on his shoulder when it comes to amateur radio. Maybe long lost twins. You both seem so brave as long as you can hide behind your 15" LCD flat screens.

Keep posting..the laugh riot never seems to end with you.

No regards or cheers for you Left coast loser

Ronnie

But this not the rest of the world Len, this is amateur radio..a
hobby/service. You lose points here for making no points in dealing with
the obvious SORRY

MOST of
> the rest of the radio world does not require the operators of non-
> amateur radio to be licensed

But this not the rest of the world Len, this is amateur radio..a
hobby/service. You lose points here for making no points in dealing with
the obvious SORRY

; stations are licensed for regulatory
> purposes and the station owners see that operation is kept legal
> by overseeing the operators.

The ley word being licensed I see. Still waiting to sdhare my amateur
callsign with with you when you share yours with us.

>
> Nearly all of the rest of the radio world has migrated up above 30
> MHz and there is where the future of radio communications is
> located.

Then I suggest you go there were you'll be more comfortable amongst you own
kind. I am sure you thrill the Braodcast world with your daring feats of
dare-doing when YOU send/relay 1.32 million teletypes. You did say YOU Len.
Your original statement never said anything about being a team. Nice try
through with that tap dance backwards you did. You got the goodies caught
in the door there old man and I can call you that cause you're a tad older
than me (I'm only 58) hint hint another clue to my identity. Besides, I
doubt you are any type of team player.

To all except for the minority who are still rooted in old
> standards and practices, trying to force everyone to conform to
> their personal desires because they like to see others "enjoying"
> masochism.

They are partctpants in amateur radio....not professional radio Get the
difference. I guess it's like people who fly model planes..never getting

the satisfaction of flying the real thing. Wannabe's, nothing more, nothing less. They ones that can't be pilots are always ragging on those that are. Seems they are a minority subset of amateur radio as well.

>

again with this fascination with guns. Gee Len, bet you polish your gun regularly huh?? Bet the barrel is nice a shiny from all that gun polishing. Are you a spit and polish man? Knew several onboard ship...Always kept polishing their guns.

Thanks again Len. Just finished watching a William Holden movie..he's a Korean Pilot gets shot down in the end with Mickey Rooney. Saw a shot of the radio room with all sorts of electronic equipment. Didn't see in the credits you were there. But you must have been..relaying those 1.32 million teletypes all by yourself

Oh, don't put yourself in too high regard there. The reason for a general
lack of response is, as seen here, because you're an uncouth functionally
illiterate nabob of negativism prone to bouts of logorrhea.

> Good humor has to be written so that it will be written as humor.

And some o' them suckers are not big. :-)

I think that ones that stand out in people's minds are the ones that stand out on the sides of the interstates. I have seen some that I sure wouldn't want in my yard. That may be the origin of some of the anti-tower hysterial.

The entry level requirements today are a lot greater than the entry-level requirments of 1963. The requirements today to obtain all amateur priveleges require the studying of a lot more than a 16-page study guide. If you are claiming Amateur Radio is in the tubes because of the requirements, you are claiming that it has been broken for almost 40 years. That is quite a bit to expect people to believe, considering the evidence of the continuous growth and evolution of Amateur Radio.

Let's take a look at the numbers, shall we?

Before the 2000 restructuring, there were approximately 289,000 amateurs
with Extra, Advanced, or General licenses. That's a couple hundred of
thousand of people the understand CW.

In the United States.

And that only includes licensed amateurs, not other people who would know
morse, e.g., Coast Guard members and folks who were telegraphers by
trade.

That's not exactly chump change.

Sure - SSB would be your first option, but you'd want a backup to rely
on. And the numbers clearly indicate that there are quite enough people
familiar with morse to rely on it.

I'm a bit baffled to you're comment that people need to *like* CW in
order to rely on it. Do you know someone that would pass over a *** ---
*** when scanning the bands because they don't like the mode?

http://cws.Internet.com/news.html

Is the highly successful Stroud Winapp website where MPG newsreader can be downloaded for free. It has a wide variety of user friendly features and in cases like this one VERY useful feature - the BOZO BIN aka killfile. Click on a post, send the poster to the BOZO BIN, which in my case has 6 permanent residents, 5 from some DX NG's and the RRAP Resident old timer Lennie H, the wonderful wizard of Geezer.

Now on to our show HOLY SHIT LEN R U GAY OR WHAT? What is this fascination with me? Is every person here without a "handle" that you can't identify me? Are you a closet homoerotic or what? This is not normal, but then again, for you it may be.

Len, I am not Ronnie D. nor am I Jay of Westchester, nor Aaron nor Krell. I have always been posting under the same address and certainly you flatter yourself when you continually insist that I post under various nomme de plume. What a world class ass you are Len. WORLD CLASS to think I would go through ANY trouble to prove to the group what a shithead you truly are. From some of the responses, I'd saw you have that well in hand. Speaking of which..loved the comments Ron about Anderson being a gun barrel polisher... classic

Anyway, back to Sir Borings accusations

I have always used this newsreader, having upgraded just recently to V2.50. They have an automatic upgrade feature built in by I don;t like downloading anything without my seeing it first. You, Anderson have been a permanent fixture in the killfile since a month ago when I got an email from John J from Westchester detailing a plan to yank your chain. Seems you figured out I was him as well. What a great time Len, it was too easy as your chain is so easily yanked.

Any, I would have never seen this if Ron hadn't responded. Hell Anderson, I figured out who he was and all I'll say is he lives on LI..the north shore affectionately referred to as the land of big $$$ but rocky beaches. Gee Lennie, it took 5 minutes based on information he gave. Guess you're not that great a FBI man huh?

Gee Len, I looked something up follow me know...I'll go slow.

I accused by YOU of being all these people?? You, the master of the changing screen name based on what? My newsreader? How about young blood Josh Houk (BTW Josh, Len purposely mispells peoples name..he gets his jollies from it). Now young Josh uses Gravity v2.50 so, am I him as well?

But follow me here, based on your logic there are 3 people on this newsgroup who use the newsreader Session Scheduler. Therefore they all have to be the same person...but wait there's more. Not only do they use the same newsreader, but they all use the same Internet provider..Aye Oh EL.

So tell me Anderson, in reality who's the fake person in the NG. You, the call-less toad, Larry, K3LT, the callsigned toad or Jim, N2EY? You all use the same newsreader and Internet service. Hmmmmm makes you think (but not too hard Len, you give yourself a hemmoroid) :-) = smiley!!!!

Come to think of it Bill Sohl and I use the same Internet service. In fact, we've both had the same provider since they were Planet.net..many purchases and mergers ago. That being the case, maybe I'm him or he's me. Hmmmmm no..Bill is into little tiny British cars that have rotten electrical systems always wanted a TR6 still do, best call Moss Motors and see if they now of anything I digress

You're a rotten person Len. You were when you were NOCWTEST and you have only gotten worse.

In conclusion, based on this abnormal infatuation with me, I am e mailing the abuse department of AOL and filing a complaint about you. I am forwarding copies of these unsubstantiated accusations of yours. In short Anderson, I am putting you on notice. I see one piece of spam coming from an AOL account, I hold you responsible and will file complaints to AOL.

So respond Len, do your best. I have another week of vacation and then back on the road and so long RRAP. I missed it not last year.

So in closing Nice try cuddles Thanks for playing and drop dead, do everyone a favor. ;-) note winking smiley

Now..scoot back into the closet for you before some sprays you with Raid Bug Killer. Now we all want to see that gun barrel shine Sgt Anderson so keep polishing CLASSIC!!!!

No nothing for you Anderson

Oh wait...Cecil

cars are black I understood how about

Model T cars are black

That would be proven positive, correct? because of the qualifier?

Forget it Steve, didn't you read Ron is me hehehehehe

Can't eat lobster..the shell gets stuck in my teeth.

Ron is almost 60 so he's more than a match for geezer Anderson. He's ex-military (Navy) and is a pretty good DX'er for having only a tech+. I hear him the pile-ups some times.

But then again...maybe he's not!!! What evil lurks in the hearts of men....The Anderson do or is it doo-doo? Either way, they both define the same west coast louse.

Dayton this year?

We'd do a lot better by not making the inaccurate statements about
the law forbidding the use of a TV antenna for other purposes, and
if it was rewritten concisely and in more coherent English. And
cool it on "free speech". The courts have long ruled that there's
no "free speech" rights issues in radio, let alone ham radio.

Just a few minor corrections.

There's no rule violation involved. Anyone is free to use whatever
they want for whatever they want. Just depends on how much 'rasslin'
one wants to do with their "friends and neighbors" in the Association.

Cecil is a ham. You aren't.

> >This will provide yet another opportunity for you to blow the dust
> >off your resume and to outline your amazing exploits.

> as an order-wire on an RTTY circuit for State Department from

> an Embassy (!!!) in Guinea-Bissau. Rather NON-amateur,
> wasn't that? Of course it was. Of course it was also a snow-job.

There was no snow job. It wasn't my idea. I did not describe it as
"wonderful". I used a system which was in place. That you don't
understand the reasons for its use make it no less true and no less
effective.

> Way, way back in newsgroup prehistory somebody named Heil
> tried to pull off a fast one by parading his fantastic exploits in

> stinky stuff it was. Poor baby got all hurt and upset. Awww...

You didn't understand it then. You don't understand it now. The
discussion back then was government use of morse. It was then used.
That you don't accept that is of not much consequence.

> >We mere radio amateurs are sure to be spellbound by your tales.
>
> Poor baby, feeling poorly that no one is spellbound by Heil's
> Mighty Radio Accomplishments?

You've gotten more than this part twisted, Leonardo. I'm not attempting
to constantly post my past exploits. I am a ham. You aren't. You're
an SWL with attitude. You've made no attempt to actually become a ham.
You simply haunt a ham radio newsgroup on the internet.

> >In case Joshua hasn't been clued in, you are not yet a newcomer to

You won't become a newcomer until you enter amateur radio. I'm not
discussing vehicles or Zambonis. I'm discussing Leonard H. Anderson,
non-ham, newcomer-to-be (maybe).

> Hint: Ice is a near relative of snow. There's a job for you there

> you think they should. Understood.

I work DX, contest, handle traffic and rag-chew using a number of modes, Len. Which modes do you use when you frequent the ham bands? I even have 2m FM QSOs with those who have never passed a code test. After all, THEY are hams.

Because you don't know morse well enough to use it and because you don't
like CW enough to be a regular user, you've drawn the conclusion that
there aren't enough folks using it for it to be reliable. That's some
s t r e t c h.

Dixie, I've been too busy kickstarting a new career to hang out with the unemployed, but thanks for the thought. And I thought we agreed that I'd take care of that upgrade biddness in 2027AD when I can go on Social Security or some kind of disability like you. Why you always pushin other people who are so much more productive with their time than you are? Do you have any idea how many non-working people I'm carrying on my back? I'll even bet you've got some of my money in your pocket.

> The one
> mistake FCC wasn't about to repeat was taking away privileges
> already granted. Comprende?

Weren't you on the incentive licensing kick not so long ago? I'm sure there are things that the gubm'nt could make you learn that would be worthy of you re-earning your license, like programming in a tone in modern handheld transceiver with an lcd display, or finally figuring out how to work split on HF.

> > Who wants to be on that VE team?
>
> Hey, I just do it.

Dixie, you cannot be on your own testing team. That would be incestuous. Lemme go look up your QSL address to see if that's legal over there.

> You and Kandid Karl just whine about it.
> If they came out with Super Extra I'd have one 30 years before you, like
last
> time..

That you're 30 years older than me probably has nothing to do with it. Time for you to get out that file and work on that long tooth.

Hey, don't be a stranger (or get any stranger). I'm good in the book.

73 and best wishes, Brian

Evil? Yes, I guess the patriot honeymoon is over with and its time to scrape off the Old Glory bumper stickers and crap on the veterans again.

> Dayton this year?

Yes, there's a hamfest in Dayton again this year. Are you the featured speaker at the DX dinner or something, singing the virtues of the Tech Plus DXer? I hope they're serving oysters on the half-shell.

The statement, "CW gets through when SSB doesn't", is the ***ONLY***
statement so far that doesn't contain boundary conditions. What appears
to be the problem is that you don't recognize boundary conditions when
they are staring you in the face.

> Perhaps you just misspoke. I suspect that is the case since you've been
> dancing around it ever since.

Perhaps I did, and perhaps I didn't. Everyone, even you, makes mistakes.

> You said unbounding the statement invalidates it. I then unbounded your
> statement, you dodged, and here we are, once more, going around in circles.

No, you did *NOT* unbound my statement. That is your error. You just didn't
recognize the boundaries. Any time you use the words, "the set of", the
statement is automatically bounded because "the set of" points is contained
within a conceptual logic circle that possesses boundaries.

> > > > You appear to arbitrarily be trying to jerk me around.

What Kim is saying is that there is a usually fleeting window of opportunity
where CW gets through and SSB doesn't. When the atmospheric effect can vary
by 120dB, 15dB of advantage can soon disappear.

Steve, what is the motivation for this? Couldn't the DXer simply refrain
from sending his logs to Eqsl?

And once the DXer does submit his/her log to Eqsl, did the DXer not work the
DX because the confirmation came from this manager and not that manager?
I'm inclined to think that the issue is money related.

Just to avoid all the hand wringing that this appears to be causing, I'm
satisfied with whatever I've recorded in my log book. I'd rather have
pictures of my kids on the wall anyway. All my real awards are in the top
drawer of my dresser, and my kids will get to throw them out someday, same
as any paper I put on the wall.

What else would Eqsl be doing if not acting as a qsl manager? You send them
your logs and... they're not supposed to recover their costs?

Charging for a contact isn't fine, no guessing required. I think you meant
to say charging for a "confirmation." At least thats what a KF2 is supposed
to be saying in America, given Part 97 as it exists.... unless we "just

ignore" the rules.

>
>Cecil is a ham. You aren't.

Like me, Cecil Moore is a thinking human being. You aren't.

Like me, Cecil Moore is a retired professional in radio-electronics
of long experience in industry. Dave Heil worked for government.

>> I don't portray myself as Heil does,
>> giving everyone a snow-job on his "wonderful idea" of using CW
>> as an order-wire on an RTTY circuit for State Department from
>> an Embassy (!!!) in Guinea-Bissau. Rather NON-amateur,
>> wasn't that? Of course it was. Of course it was also a snow-job.
>
>There was no snow job. It wasn't my idea. I did not describe it as
>"wonderful".

The exact words were more like a "neat idea" and the claim was
as a "personal innovation." it was intended to prove some kind of
point on the superiority of CW over teleprinter. It did not prove
anything except that snow jobs can grow in hot weather.

>I used a system which was in place. That you don't
>understand the reasons for its use make it no less true and no less
>effective.

The first excuse/rationalization was that "the circuit needed to be synchronized." That was a technically false statement since teleprinters are all designed to be self-synchronizing to the remote transmitter.

Heil later "amended" that to mean "synchronizing schedules and frequencies" which is not yet understandable in commercial-government practice. If a teleprinter terminal is working at all, a full set of "schedules" and other data can be transmitted to both ends of a circuit, identical in content at each end.

Had the excuse/rationale been given that a teleprinter was "down" (not working), then use of CW would be perfectly understandable and acceptible. That was NOT given.

>You didn't understand it then. You don't understand it now. The
>discussion back then was government use of morse. It was then used.
>That you don't accept that is of not much consequence.

Incorrect. Heil made the initial remark claiming some personally-conceived innovation, not on "government use of morse" but of trying to prove a point of morse modes over teleprinter.

A much later excuse/rationale claimed that such switchover in modes was some kind of State Department "radio doctrine" or "procedure" to use morse modes as an order-wire on a teleprinter circuit. That defies understanding considering that teleprinters over radio had already been in use throughout the US government and military for over 30 years prior to the 1980s. USN and other military procedures on teleprinter circuits are given in a 1967 USN text used by all branches. Existing for 15 years prior to this alleged innovation, it explains "synchronization" and also "order-wires."

>You've gotten more than this part twisted, Leonardo. I'm not attempting
>to constantly post my past exploits.

Again, incorrect. Heil has done so in the past.

>I am a ham. You aren't.

Heil is a radio amateur. I am a radio professional.

>You're an SWL with attitude.

My attitude as a BCL, SWL, TVW and as a radio professional is that I enjoy all of it. Wouldn't do it if there was no enjoyment.

I might enjoy amateur radio as well, but certain attitudinally-oriented rank-status-privilege-by-mode-and-tenure "superiors" insist that I must only enjoy what they personally enjoy.

>You've made no attempt to actually become a ham.

Incorrect. I've never carried it as far an amateur radio license examination.

>You simply haunt a ham radio newsgroup on the internet.

Incorrect again, a false assumption.

>You won't become a newcomer until you enter amateur radio. I'm not
>discussing vehicles or Zambonis. I'm discussing Leonard H. Anderson,
>non-ham, newcomer-to-be (maybe).

Heil is not "discussing" but venting frustration on an individual
he has not been able to best on a newsgroup.

>You've misread my statement much as you've misread others. This one was
>simply an observation.

Not at all. Heil exhibits an extreme need to win all "discussions"
including methods of deprecating and denigrating others who do
not share his viewpoints. Standard Operating Procedure. :-)

>> Heil has made all kinds of statements of the OBLIVIOUS with that
>> tired old CW-uber-alles speechmaking. Jay-suss, big Dave, did
>> they toss you out of the Bund meeting again? Poor guy.
>
>Another Nazi reference, Len? In which statement did I mention CW?

"Uber" (over) and "alles" (all) and "bund" are all German words.
Not all Germans are/were NAZIs. "Heil" as a surname is
Germanic and means a salute or honor as a German word.
Is Heil a NAZI?!?

>Does this mean you already have an ARRL tee-shirt?

No.

>I work DX, contest, handle traffic and rag-chew using a number of modes,
>Len. Which modes do you use when you frequent the ham bands?

I have no authorization to be a control operator of an amateur
radio station. I do not "frequent the ham bands" (presuming Heil
means only those bands below 30 MHz). Why would Heil imply
that I break the law?!?

>I even
>have 2m FM QSOs with those who have never passed a code test. After
>all, THEY are hams.

We had ham last night (Thursday) for supper. Quite good.
Tasted just like ham. ;-)

I have semi-regular communications on UHF above the amateur
70 cm band, moved from above the amateur 2m band. NONE of
the communicators need or needed code testing. After all, WE
are professionals, carrying on business. :-)

I am well aware of the elitist attitude of some that NO ONE can
possibly discuss ANYTHING involving amateur radio until they
are authorized by a government amateur license. That includes

petitioning my government for a redress of grievances, a right supposedly granted by the US Constitution.

I'm also postitive that Heil will be upset (to some degree) by this response and will continue with his regular routine of insisting on conformist attitudes and demanding that others enjoy what he enjoys whether they like it or not. He is not correctable even if wrong. Matters not. :-)

In article <5BGd8.9880$0C1.830076@newsread1.prod.itd.earthlink.net>,
a pseudonym wrote:

>But this not the rest of the world Len, this is amateur radio..a
>hobby/service. You lose points here for making no points in dealing with
>the obvious SORRY

Wrong in several areas.

Amateur radio is a non-pecuniary radio service which is primarily
an avocation ("hobby"). It is a "service" to the nation, the community
hardly more than the Citizens Band Radio SERVICE is a "service."

The word "service" used throughout Title 47, CFR, is a regulatory
term that denotes a type and kind of radio activity.

There is nothing wrong with amateur radio as a HOBBY and
there should be little doubt that the majority of amateur radio
licensees derive great pleasure in its recreational aspects.

The aspect that is suspect is the self-glorification by organizations
and fantasizing individuals that it is more noble and glorious and of
greater service to the nation by its existance than any other radio
service. It is common practice of all organizations to engage in
selective phrasing and factual omissions to promote themselves.
An organization's existance depends on it. Organizations carefully
choose their wordings, phrasings, and highlighting of factual
information (and careful omission) so as to sway opinions of
interested individuals and government agencies. That is accepted
practice in any organization for any activity. Such is known as
propaganda (which can be both positive or negative), lobbying
(in reference to swaying government opinions), and in less-desired
forms psychological warfare, brainwashing, and "spin."

Armed with tools of mass media (publications), an organization
can make its appearance large, formidable, expert, and "official."
When the target of the media is relatively isolated, as with radio
amateurs who are not employed/engaged in the rest of the radio
world, the propaganda can seem truthful, official, and emotionally
fulfilling. Emotional satisfaction must exist on many levels and it
is not unknown for organizations to all but demand unswerving
loyalty to itself. See the second ("loyalty") item in the Amateur's
Code, long published in the front of every ARRL Amateur Handbook.
That "loyalty" phrasing binds the ARRL in irrevocal, intimate
partnership with national patriotism, local or regional patriotism, so
much so that it excludes any other organization from consideration.

It is an absolute based solely on its own definition.

Such loyalty is emotionally fulfilling to those who have a Need of Belonging, of becoming a part of a group, tribe, or clan. It is a survival mechanism inherent in humans but on an emotional level, not a physical survival mechanism. In extremes there is a great confusion between physical and emotional needs, demands to exclude "outsiders," over-identification of self to the group and group "leadership", ultimately to a fanaticsm that reaches irrational levels. Fanatics cannot accept reality or rational thought since they have crossed over mere survival to exist in a fantasy world.

A problem with the emotional extremists and fanatics in certain activities involving physics is that the Laws of Physics are not changeable. Electromagnetic waves and electrons cannot be persuaded to obey any humans' emotional desires or concepts. Humans must meet Physics at Physic's terms, not theirs. That may be at the heart of myth formation.

Myths are fantasy concepts, itself a psychological-emotional survival trait to explain the unexplainable, to attempt coming to grips with intangibles, things that require dispassionate learning efforts when they are beyond human sensory capability. The easy way out is to buy into myths, to accept group thought as truth because the group is big and disagreement means censure and possible exclusion from the group. One of the most prevalent myths is the old phrase "CW gets through when nothing else gets through." Morse codings directly involve human sensory input and rhythm cognition, have existed since before 1840 and all of radio.

Other modes exist that "get through" better, are used elsewhere in the radio world, have been used for decades, and a few of them are useable in the amateur allocations made by federal agencies. They are rejected by the extremists as "unsuitable for amateur use" not on a technical basis (too hard to understand intangibles) but solely on an emotional basis. Why? The reason is simple. Those extremists were able to learn it and use it at high rates because their personal aptitudes allowed them to succeed. Rhythmic cognition of representative monotonic sounds to letters and numbers of an alphabetic language is not a common human trait, not a predominant one.

The over-identification of a singular communications mode to an avocational radio activity resulted in a deeply divided amateur radio service worldwide. The amateur radiotelegraphers fight the amateur radio hobbyists with all kinds of specious reasons, many of which defy rationality. The radiotelegraphers consider themselves elite, superior, important to the nation, possessors of a "vital skill" that "must be kept alive" even when they are the only claimants.

Amateur radio is a small part of the entire radio world. It is no longer the only avocational radio activity possible but it may be the last avocational radio activity which requires a strict adherence to everything from authorizations and callsigns to rigidity in acceptance of attitudes, behavior, desires of the "leadership." To the extremists it may seem a psychological militia "at war" with those inferiors who cannot see their manly martial magnificence. To the majority it is simply a hobby.

Amateur radio does not operate by different physical laws from all other radio services. All work by the same physical laws. Laws of physics, not laws of humans. The technology of all radio is adaptable to amateur use, including other radio service operating methods, practices. That is not acceptible to emotional extremists. Those demand rigid, even secular obediance to their beliefs...for no good reason except to force all others in their own image. Few can see that image as attractive or superior. It is not a pretty picture.

>what things are being expressed.

I'm doing both, Kim. I'm quite interested in issues of reliability,
availability,
time utilization and technological choices. We seem to have very different
philosophies, that's all.

For example, I have found that it pays to buy the most reliable appliances and
vehicles I can afford, even if it means sacrificing bells and whistles, if the
appliances and vehicles are needed for the smooth operation of my family's
life. That's one of the main reasons we bought a Honda Odyssey when the
purchase of a minivan became unavoidable. The Dodge Caravan and Ford
Windstar were less money, but less reliable.

>Bottom line: CW may be a very reliable
>mode, maybe even the *most* reliable mode. But, if there are few who use it

True - but there are lots us who do use it and like it. More than some folks
here on rrap want to admit.

Your opinion of the reliability of CW/Morse is understandable, given your
lack of experience with the mode and the amateur bands where it is most
commonly used. That's not meant as a criticism, Kim, just a simple statement
of fact.

The ARRL has recently reaffirmed just one week after the original
historic announcement (08-Feb-2002) that eQSL Cards - ARE - accepted for
DXCC....this remark from the eQSL Webmaster found at this

URL: http://www.eqsl.cc/qslcard/comments.cfm
"ARRL reaffirmed today that it will accept eQSLs that are mailed. AG or
not" (Webmaster)
15-Feb-2002

Broose hates the ARRL also, so the ARRL by-laws don't work either. Now if
you check the by-laws of the VCR Repair Society, you might get his
attention.

>
> Steve, what is the motivation for this? Couldn't the DXer simply refrain
> from sending his logs to Eqsl?

The whole premise was a paper-less qsl medium. The major problem being
that people who participated in the DXCC program could not submit eqsls
for DXCC credit or clicks as some call them. And yes, the DX'er can
refrain, but when this was announced it was a sudden done deal and a
few, not all of the DX'ers felt that they should have had a say as to
whether or not Eqsl would represent them.

>
> And once the DXer does submit his/her log to Eqsl, did the DXer not work the
> DX because the confirmation came from this manager and not that manager?
> I'm inclined to think that the issue is money related.

It isn't a matter of the confirmation per say, I contact you, you reply,
we're both in the log..confirmed. I download my logs, or visa versa and
we pick them up from the Eqsl site. It's become a matter that now,
again for participation in the DXCC, WAZ and several other programs, if
your contact is in Eqsl's, you have to pay to A $1 have them print out
the card, mail it to you, then you have to turn around and submit it to
whatever program your are participating in. So yes, it is a money

issue.

>
> Just to avoid all the hand wringing that this appears to be causing, I'm

Ands as Carl had said, he doesn't either, but there are lots of people,
myself included that do.

>
> What else would Eqsl be doing if not acting as a qsl manager? You send them
> your logs and... they're not supposed to recover their costs?

According to the various programs, there must be an understanding that
the QSL manager is representing the particular DX station. There are
several instances right now where the are bogus QSL managers for a
number of pirate stations. My understanding from discussion with Wayne
Mills and Bill Moore is that you can't arbitrarily declare yourself the
QSL manager without specific permission form the DX station. Up and
till recent Eqsl was a clearinghouse for qsl confirmations. Now
recently, they have gone into the business of selling cards if you wish
to participate in these various programs.

>
> Charging for a contact isn't fine, no guessing required. I think you meant
> to say charging for a "confirmation."

Correct, my error. The contact has already been made. If you want a
"valid" confirmation that can be submitted for DXCC or WAS or WAZ, you
have to pay.

> At least thats what a KF2 is supposed
> to be saying in America, given Part 97 as it exists.... unless we "just
> ignore" the rules.

Yep, Part 97 specifically states you can't accept money for a contact,
but then again, as you correctly point out, this is not a contact, it's
a confirmation of the contact already made. I'm aware of several DX
stations that actually required a cash contribution above and beyond the
normal SASE or IRC, before they would release a card, one formerly being
on Roatan Island and the other being on Reunion Island. But then their
foreign stations and Part 97 does not apply. The point is, it seems to
go against the very principles that Eqsl has been trying to develop. A

paper-less qsl format that requires virtually no $$$ except for a voluntary donation to the upkeep of the site. Yet, now they are printing cards for cash. You can't have one that you can use for these programs unless you pay. In this case, are you paying for the contact or paying for the confirmation? The contact has already been made, as proven by the downloaded card. The confirmation is another story and is not covered anywhere by Part 97.

It all boils down to the principle. If you want to play, you are being forced to pay. Illegal, no, just a tad strange that they'd set the bar and when more and more people complain they lower it themselves.

I doubt, at least for the time being that you are going to see any of the big DX operations use Eqsls. Again, for one thing, the card won't count for any clicks, as Jim calls them. For another, there is the voluntary donations that some people make with their cards to help offset/recover some of the costs. What I've seen is the basic DX stuff, essentially from contests, etc. I doubt you'll see the TI9M or the H40T downloading their logs to eqsls. LOTW maybe, but for the time being not Eqsls

But as you said previously, if you aren't participating in these programs, what difference does it make if they print cards or not, the point is moot. The confirmations are their in the computer and the archives.

Up until your last sentence Brian, it was nice to have a rational conversation with you for a change. You just can't let a good thing go by without going true to form. Too bad.

Have a good weekend

Brian, go easy on the poor feller. It's not easy for them to figure out
who they are when they are and have been several different peoples.

I liked "fungi" the best with the "suddenly-activated-to-national-
defense-duties" ossifer from under the bridge a close second.
But that's just an entertainment review... :-)

They haven't risen to Ebert and Roeper level yet and Hollywood
isn't calling even though it should be ripe..."cast of thousands!"

>>And you learned that from the ARRL handbook?
>
>Dig out a 1967 Handbook. Transistors are in there.

The so-called "military" transistors 2N2222 and 2N2218 were on the market then with the complementary PNP-NPN 2N390n and 2N412n families debuting the following year. All of them are still on the market, still being used in new designs for general-purpose work in electronics and radio. They have been widely accepted and survive after 30+ years.

Principles of semiconductor operation (minority, majority carriers) aren't of much use in designing, apply, testing, debugging circuits. Such things as stable-over-temperature biasing and the V-sub-BE drift go unmentioned as does BV-sub-CBO (especially driving inductors). It may be nice to know some vacuum tube principles and all that good stuff about making them when hardly any amateur ever made his or her own tubes but that seems out of place today.

Anyone who read Radio Craft magazine in 1947 could have found out "all about vacuum tubes" as I did as a teen-ager but that was NOT "all about them." Far from it. And it was not immediately-useable information on how to apply them, trouble-shoot circuits containing them. 1947 was 55 years ago. Radio technology of today and of the last two decades has been predominantly solid-state. Vacuum tubes are quaint curiosities of the past useful only in a very few disciplines in radio.

The radio world keeps evolving and advancing in its state of the art. Its too bad that so many long-timers affixed themselves to the past and refuse to budge, claiming greatness when they look more like has-beens. They should call themselves members of the Archaic Radiotelegraphy Service? :-)

I'll tell ya what, Dave. I invite you, or anyone else, to provide the
message that was relayed via CW out of the most serious and devastating
disaster I can think of recently here in the US. Was there one CW message
sent to request help, relay site information, etc.? One?

I doubt it.

> 73 de Jim, N2EY

And, not meant as a criticism, just simple statement: it seems you are still discussing the reliability of the mode...in spite of its popularity of use among amateurs in emergency situations. Not just my personal feelings about the mode, but my experience since being a ham of listening to hams discuss disaster situations, watching discussions in other venues on disaster communication, etc., tells me that CW is little used/relied upon in most disaster situations. In fact, other than simple traffic handling routines, I know of no instance where CW has been used in an emergency.

Take the WTC disaster. I've already offered that someone provide the message that was relayed out of that disaster scene--this country's worst. I don't think you'll find one. I am not saying anything against the mode, its users, etc. I am simply stating that it is my opinion that CW is not a preferred mode in an emergency.

> you? I am a Tech+ and I never use CW.

And if you read my statement again, you'll see that I never mentioned
Tech+. And if you read my statement yet *again*, I simply said that they
"understand" CW, not "use" CW.

The General Class and above licensees before April 2000 demonstrated an
ability to copy 13wpm and above. They showed that they were functionally
literate in morse, and that learning really doesn't fade much over time,
even if they predominantly or only use voice or digital modes other than
CW. If an emergency communication in morse was received by them, I'm
quite confident that they'd be able to deal with it effectively.

> I didn't say not to have backups, Joshua, I said I don't share in the
> opinion that CW is all that reliable--because I believe that phone is the
> mode of choice among most operators.

So what? Voice isn't my mode of choice, yet people could definitely rely
on me to communicate with them via SSB/FM if they needed me to.

300,000+ functionally CW-literate amateurs (and again, the number
increases when you account for foreign hams) isn't enough for you?

> > I'm a bit baffled to you're comment that people need to *like* CW in
> > order to rely on it. Do you know someone that would pass over a *** ---
> > *** when scanning the bands because they don't like the mode?
>
> One need not know CW to know SOS.

Again, reread what I said. I used the word "like", not "know".

But, addressing your divergence, the operator would be up the proverbial
creek if you recognized the ... --- ... yet didn't understand .--. .-.. .
.- ... . -. -.. .- ... ... - .- -. -.-. . - --- (...
..- -.-. .... .- -. -.. ... ..- -.-. .... .- .-.. --- -.-. .- -
.. --- -.), neh?

If this is saying that one cannot take element 4 before passing element 1,
that
is incorrect.

Stussman, you got a problem reading or are you just a nitpicking twit?

When Element 1 becomes a written exam and pink pigs fly you may have a
point.

David:

I just passed the exams in October. Hamming is GREAT hobby and I encourage you to take the exams, buy some equipment, throw up an antenna and get on the air.

The cost is $10 per session, It's the same $10 if you take one element, all 4 of them or anything in between. I do not know if it is always done this way, but at the session I attended, the code test was given first. Whether or not you pass this element, you can then sit for the Tech written test. If you pass that, you can take the General written and if you pass that you can take the Extra.

If you unfortunately fail the code test but pass the Tech and General, you will be licensed as a Tech and if you pass the code test within one year you will not need to retake the General exam. Similarly, if you pass the Code test and the Tech test, but fail the General, you will be licensed as a Tech Plus (with limited HF privileges in addition to the full Tech rights) and can later sit for the General without needing to repass the code test.

Not that you asked, but let me share with you my study methods -- they worked for me as I passed all four elements at one sitting:

1) Code: The exam is given with the di-dahs at 15 wpm with long spaces between letters and words so that actual speed is 5 wpm. Any of the computer based code programs (some quite good ones are free) can do this for you. I never listened to code at slower then 8 wpm. That way, when I took the exam (nerves, a different tone, etc), I had a nice cushion.

2) To pass the code test you need to either copy 1 solid minute "clean" (no errors) or get 7 out of 10 fill in the blank questions correctly -- that is a fairly recent change, I hear, as the questions used to be multiple guess. You get to try both ways if needed. The test is a simulated QSO, NOT random characters or words. So if you copy "My ??? is Austin? TX" you can fill in the misses easily enough and get "My QTH is Austin, TX" So, while studying the code, also learn the format of a standard QSO.

Good luck and let me know if I can help in any way.

Of course you would doubt it.

And, needless to say, you would be wrong.

The only survivors found in the rubble - six FDNY personnel (sadly, one
later died due to his severe injuries) - were found because they were
tapping out morse code to make people aware that there were buried
beneath the iron and concrete.

Sorry - I don't know the message. Do you really want to call them up and
ask them what it was, or are you embarrassed enough by having the gall to
try to use the WTC attack as a justification for your smugness?

Hello News Editor,
I have used domain forwarding for years and it is very useful. However
I pay only $16 / year for the domain registration, the email forwarding,
URL forwarding, full-frame forwarding, toll-free tech support, domain
parking, and full-featured DNS....all found at.....
http://www.buydomains.com/

Your price (from your site) is $23. IMHO if smart people shop around
for these kinds of services they won't be contacting you.....your
competition has already got you whipped but good.....

>The ley word being licensed I see. Still waiting to share my amateur
>callsign with with you when you share yours with us.

As you can see, Ron...Don't hold your breath for Lennie.

Lennie can't even keep the legal parameters of HIS license in perspective.

October a year ago, Lennie announced to the NG that he was allowing his GROL to expire. Of course anyone who HAS a GROL knows that they are lifetime issues.

The Lennie got into it with us about where he can "legally" operate with his GROL as opposed to an Amateur license.

I quickly pointed out to him that his GROL SPECIFICALLY prohibits him from operating a transmitter that does not have a valid station license....In otherwords he cannot operate ANY radio transmitter that does not have a callsign.

And of course WE (yes, Lennie...WE) know that the Amateur Radio Service grants BOTH operator AND station license priviliges. Of course this means that except for PArt 95 and PArt 15, Lennie the Loser is kaput as far as emmiting RF goes.

Futhermore, he has NEVER been able to "operate" on more than a few specified frequencies or "authorized" bands as issued to the company for whom he was contracted.

Bottom line? Lennie has NEVER been a COMMUNICATOR. He's turned on boxes, pushed the right buttons, and processed traffic over pre-established nets or circuits. he could nevr even approach that feat on his own.

> I am sure you thrill the Braodcast world with your daring feats of
>dare-doing when YOU send/relay 1.32 million teletypes. You did say YOU Len.

I'm a little ambivalent regarding the traditional qsl vs eqsl
comparison. I do think that the electronic form of qsl'ing takes away
some of the preciousness of the event. I remember my first regular qsl,
but would have to look up my first eqsl.

That being said, I think it is inevitable that the electronic form of
qsl is the way things are going to go.

It won't destroy DXpeditions, it will just change the way they work.
Wanna give a donation? Perhaps the donations will be looked for before
the DXpedition starts. The other "problems can probably be worked around
also.

The time of transition will be the rough time. We'll be using direct,
Bureau, and eqsl at the same times.

Then I suggest that you leave this forum since you are highly unlikely to
meet anyone who shares your foolish regard for it....

>"Incompetence in radio?!?" After a career in it that covered a wider
>span of the EM spectrum than ever allocated amateurs, using more
>modes and modulations than ever allocated amateurs, and getting
>paid for it IN engineering? Not hardly.

Yes...Incompetent.

You talk a good talk, but so far we have not seen you demonstrate one iota
of skill or competence in ANY radio discipline.

And as pointed out earlier, any "spectrum" that you may have had the
opportunity to cause RF to be emitted on was NOT allocated to YOU. It was
granted to you by course of employment, and was not "yours" to play with
outside the scope of that employment.

I, on the otherhand, (as with most everyone else here...) can get up from
this chair and be "on the air" from DC to daylight in a matter of seconds...

>What can Steve of "Steve and the Boys" claim? Changing black
>boxes in aircraft?

Once upon a time.

>Being a purchasing agent? [good luck on your
>new job]

Lennie's not been paying attention.....

>Or sitting around waiting for some elderly people to show
>up so you can show off your manly skills at beating up old folks?

....mostly becuase he's sitting around thinking up mean things like this.

>Actually, most other radio services in the big radio world in the USA
>do NOT need an operator license to legally emit.

Nope...they don't. And without being in the employ of that company which holds the station license, you can't even use THOSE!

>Several radio
>services do NOT even need station licenses.

Sure....FRS, MURS, CB, Part 15. In as much as >>I<< can use those services IN ADDITION to my Amateur license, I am STILL ahead of the game as far as YOU are concerned, Oh Licenseless One!

>Then go and EMIT. Look around you, there may be more targets
>for you to EMIT more bile and vomit, certainly some old folks that
>look weak to you that you think you can beat up.

Hmmmm....Accusations of elderly abuse in order to try and deter me from pointing out just how foolish and deceptive you are.

Cowardly, Lennie...very cowardly. Not unexpected, but cowardly nonetheless.

>So far you don't present a good example of the US ARS...or even
>as a human being unless as a barbarian sub-species...

Since we are talking about you, it matters not. You have already demonstrated your vileness and foolishness.

>Attilla the Ham.

Atilla conqured continents. You can't even get a signal across town.

G'nite, Lennie!

Your statement with reference to the code test was unclear. If your point was with regard to only the written tests, then why did you mention the code test at all? One possible reading of your response is that one must attempt (if not having passed) element 1 when holding element 3 credit and simultaneously (i.e. at the same session) attempting element 4.

Nitpicking? When one interpretation of your statement is correct, and another is wrong, isn't it better to communicate clearly?

Let us say you have a talent for selective mis-interpretation.

Do you have a source for this story?

You won't find it because there was no official comment made. n A
question was put to Bill Moore and the response was forwarded to EQSL
and the thing snowballed from there.

>
> Conflicting rumors say ARRL is placing added requirements on

The requirements are that the card is printed out and sent to the person
requesting the card. The card is then sent to the DXCC desk for
submission. It will be considered the same as if you received a card
from a QSL manager..HOWEVER, if the originator tells the ARRL and EQSL
that he/she does not want EQSL to act as their QSL manager, the card
will not be accepted for DXCC, WAS, VUCC, etc. There is a gray area
about the fact that EQSL charges for the card, as opposed to a voluntary
donation to cover costs. The jury is still out on that though.

Seeing that the onus is on EQSL for getting their cards accepted for these various programs, you have to take it at face value.

Personally it seems to defeat the purpose of a paper-less qsl card. But it's going to be the wave of the future as far as your standard DX confirmations are concerned. I doubt you'll ever see a major DXpedition will upload their logs to EQSL. The ARRL's LOTW is a different matter. That's being touted as a way to electrically submit for awards, not get the cards.

Here's the message from the EQSL site.....

From: Moore, Bill, NC1L [mailto:bmoore@arrl.org]

Subject: RE: Professionally Printed and mailed eQSL's
Hi Rich:
Something does not sound right here. You are saying that Dave is physically mailing out QSL cards by the US postal system? This is news to me.

If you are my QSL manager and I send you my logs by e-mail, I am sending them direct from point A to point B. Just as if I was sending them to you by regular mail. This is OK. I remember somewhere several years ago that some people used to get their logs over the air on RTTY and another digital mode (AMTOR I think). Not a problem.

However, if as the result of a log being sent to E-QSL, someone goes in and receives a card electronically and uses it for DXCC, that e-QSL cannot be accepted for DXCC credit under rule 2. I spent a bit of time with a simple shareware program to prove the unreliability of that method.

However, if Dave, acting as QSL manager with station logs completes a card (even one from his printer) and sends it by mail to you, this is an acceptable exchange and we have see this often for several years now. (assuming he phyiscally checks the log). Many people use self-made cards from their printer. Each one is evaluated on a case by case basis, and many times under Section IV rule 4(b) we have conducted an audit to insure the vaildity of a card like this.

In cases like this it would be REAL nice if they used a stamp or placed their initials or signature on it, but this is not required by the rules. However, this issue has been discussed and has been given some consideration.

To clarify, if Dave is sending out cards through the US Postal System as the result of the log(s) he receives, this is OK. (This would basically be operating as QSL manager).

Regards,

Bill Moore NC1L
DXCC Manager

Have a good weekend
